Body handling: Binary attachment payload not displayed: drfuller.vcf

I am looking for some info on how to read Fleet Maps In order to program my Pro-92. I also still looking for any talk group info for the Forrest, Lamar, Jones, and
basically South Mississippi as well. So if you can help or point me in the right direction. It would be appreciated a lot. So please e-mail me the info as well.

Thanks

Dave

Yes it is, that's one reason I like feedback. I told a fellow on
R.R.Swap I'd take a QRP rig he had for sale and asked for his address.
He told me to send him my address and he'd ship the rig (which he did)
and said if you like it pay me (which I did), if you don't like it
send it back.

Just recently I bought a $250.00 SW receiver from a ham on eBay on a
Sunday, Monday I told him the MO was in the mail and to please notify
me when he shipped the radio, he informed me the radio was shipped on
Monday also. He got his money order Wednesday, the same day I got the
radio :)

There are still good, honest folks around :)

Chip.

BE SURE you have it in writing that the seller will ship you another one at no charge if it is seized, put the liability on him, as the shipping method, packing method, item description, etc, and dealing with his own shipper is all under his control. Of course if you are getting a great deal on the price you will not get this agreement and it will be your loss. The worst is that the radio never arrives, there is no law against ordering a foreign scanner with the possible intent of using it for cell bands.

I went to my local ham store for a test drive and noticed that a relay seemed to click every time the squelch was broken. It that the case or was some option switched on that I didn't notice? I have read out here that they click a lot but gee, every time the squelch is cracked? I almost started thinking about finding a used R-7000 again. I loved the everything else about the R-8500!

Thanks for your input, I am on the verge of ordering the R-8500!

14. Lake County IL EDACS System

Newsgroup: rec.radio.scanner
Date: 2000-07-01 00:00:00 UTC
From: "Rich Carlson, N9JIG" <rich@n9jig.com>
Message-ID: <rich-85934C.17030901072000@news.theramp.net>
Source record: 85659

Lake County IL EDACS System:

1 866.2500 Confirmed LCN1
2 866.3000 Confirmed LCN2
3 866.6375
4 866.6875
5 867.1250
6 867.7250 Confirmed LCN6
7 867.8125
8 867.5625

The control channel has migrated to Channel 6 today (Saturday). It had been on Channels 1 and 2 before.

As Gary Hahn has said, it appears that this system will be using an LCN order in ascending frequency order.

As of yet no talk groups have been heard active, although I have detected a couple stray telephone interconnects. These could have been anomalies in the data stream however, no voice was heard, they just showed up on the screen.

What often happens in trunked systems is that the engineers will test each group in succession, and often identify the group's name while doing so. Our friends from AOSC got all the talkgroup info from Dayton's system in this manner.

It would behoove us to keep monitoring this system during it's construction phase. Not only can we learn talkgroups, but it is often fascinating to hear the engineers chat about the system. Deserving of special attention is Dec. 1809/AFS 14-021. This has been reported on multiple systems as being used on an ongoing basis by radio techs, and has been referred to as the "Holodeck" channel on several. I guess the system engineers are also fans of Star Trek.

From: kj5no@aol.com
Message-ID: <20000701185050.01796.00001226@ng-cr1.aol.com>
Source record: 85663

Hi,

Radio Shack sells this 1000 channel handheld scanner for $299.00.

I am asking $180.00 and it is in like new condition. Rig comes with nicads, cig lighter adapter plus standard box, manual, antenna and is in excellent condition.

Brian k5in I would also swap for bc895xlt, bc sc200xlt.

19. FS:ICOM IC-R7000

Newsgroup: rec.radio.scanner

I have an IC-R7000 communications receiver which is considered by many to be top of the line,the rig is in excellent condition and comes with the original manual.
IC-R7000 specifications:
Frequency range= 25-1000MHz,1025-2000MHz
Frequency control= CPU based digital PLL synthesizer.Direct frequency entry.
Memories =99 tunable memories store frequency and mode.
Scanning=full scan,programed scan,mode selected scan,selected scan,memory channel scan,auto write programed scan & priority scan.
Frequency readout=7 digit fluorescent.
Frequency resolution=SSB,FM/AM,owner selectable 100Hz,1KHz,5KHz,10KHz,12.5KHz,25KHz all modes all bands.
Frequency stability==+or- 5ppm @-10c to +60c
Power supply=117 or 240 VAC
Receiving system=25-1000 MHz FM-N/AM/SSB triple conversion,FM double conversion:1025-2000 MHz,FM-N/AM/SSB quadruple conversion,FM-W triple conversion.

I will ship to the lower 48 for $700.00

Regards
Bob Stamper

Hey SA. If you don't like my replies, well too friggin bad. You also seemed conf8used and dazed but I'll help you out. I didn't post anything off topic, I replied to the topic. Again, if you don't like it use your filter or maybe try and force your pea brain not to read it but what ever you do try and quit wetting your pants everytime I post. Sa you are embrassing yourself, again.

Tell you what SA, I'll follow your lead.

Duhhh, to get better scanner reception, put your antenna up as high as you can. Duh, there ya go S.A., I posted uhhh, on topic, yup just like SA Good buddy! Yup yup!

Did you read it all SA! EVERY WORD?

The power one can have over morons is amazing. SA you makes me feel like a GOD!!

ROFLMAO!!!!!!!!

Ah, vacation time again...Greasy burgers, overheated engines, "Magic Fingers" beds, and oh yes, your new God "Dramamine". Anyhow, happy thoughts aside..I'm looking for decent freq/system info for the following places:

Missoula/Butte, Montana
Cheyenne, Wyoming
Salt Lake City, Utah (no need to reply Jon)
Las Vegas, Nevada
Reno, Nevada
Inyo/Mono Counties, California
San Francisco, California
Coos Bay, Oregon

I have some rudimentary info on the above places, but was hoping for something a little more in depth, i.e. someone who lives in the area(s).

Especially appreciated are public safety, security/hotels, trunking info, and mystery freqs.

I'd be happy to trade for Seattle/Puget Sound area info.

Thanks mucho in advance,
Brett

If these transmitters are registered with the FCC then their database can
provide the lat/long. All you need is a little help in using their "retrival"
system.....all you need is the general area for starters....

Scanner possession is not illegal anywhere in the United States.

Mobile use is restricted in New York State, and portable use is restricted in some towns and cities. The NY law about mobile use specifies "motor vehicle" use, meaning car, bus, etc. If you are a licensed ham operator, the mobile restriction MIGHT NOT apply to you. At the moment, a judge in Suffolk County has held that hams have a blanket exemption. This is not binding anywhere else, however.

Message-ID: <20000701012204.01817.00001043@ng-fs1.aol.com>
Source record: 85738

Just an idea: does this only happen when your PC and scanner are plugged in to the same (or adjascent) outlet ? Try plugging into an outlet farther away. I had a similiar problem and it cured my interference. I have a Pro-91 and when it is plugged into the same outlet as my PC, some of my 151 mhz freq lock 'on' with a hiss.

I recently traded for Brad's Drake R8 receiver. I found it had some problems when I got it hooked up. Brad gave me the choice to trade back or send the R8 to Drake and he would pay for repairs. So I sent the radio to Drake and they fixed the rig. Brad paid the bill and believe me it wasn't cheap. It would
have been a severe financial strain on me to pay to fix the radio. Thanks to Brad NB9M.

47. Grand Princess Cruise Ship Scanning

Newsgroup: rec.radio.scanner
Date: 2000-07-02 00:00:00 UTC
From: Michael R <w0kie@home.com>
Message-ID: <gqN75.3150$oj6.18986@news1.rdc1.tx.home.com>
Source record: 85598

I scanned on the Grand Princess Cruise Ship in the Mediterranean this summer.

Ship Service Channels: Receive 467.525, 467.550. 467.575. Transmit 457.525, 457.550, 457.575.

Simplex: 161.350 and 161.450.

The Princess Theatre wireless microphones ranged from 655.066 to 655.250.

Other inside the ship radio activity heard in the 459.1XX and 459.2XX region.

For ship docking scanning I used an Optoelectonics R10 FM receiver without any frequency read out.

Activity on the .5 watt family radio band was also noted. These radios could be rented at the ship excursion desk.

In Istanbul, Turkey I worked some local hams on their 145.650 repeater in English (sorta).

Many of the Grand Princess staff use digital pagers with replies via ship telephones.

Now for an inside tip. There are two private crew movie channels on the Grand Princess. One with fairly new Hollywood movies in English. Another movie channel in the Philippine launguage. These are transmitted on the ship's TV system but the passenger TVs are preprogrammed to skip these channels. No matter. The stateroom TVs are all equipped with front panel switchable audio and video inputs. Anyone with a portable VCR should be able to tune the private ship TV movie channels via the VCR with the VCR output feeding baseband audio and video back into the stateroom TV.

Don't forget to bring AM/FM radio headphones for broadcast scanning.

Michael R. W0KIE

just heard a south texas public radio station on 90.1 - still working on the
callsign.....

52. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 2000-07-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8joe48$5nm$1@news.hawaii.edu>
Source record: 85603
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

All I can say is that it works great for Trunker, 99.9% copy nearly all the time. All MDT traffic in Utah is CDPD so I don't even try. You can build more complex 2 level slicers but that wasn't my goal. I've built 2 and they work flawlessly.

Glenn "Mackey" Hansen with his crappy comments again. Thought this stalker of News Groups curled up and died. He bitches about off topic posts, and then does it himself to put down someone. To keep this on topic, I have found that the Pryme RD-8 antenna makes the PRO-92 reception about 70% better than with the stock antenna.

>upgrade'? Why bother, it doesn't eat anything.

Years ago, to renew an amateur license, one had to certify to the FCC
that they had operated N hours on the air...

I wouldn't mind seeing someone lose their license if they weren't
fulfilling our "fundamental purpose" as set forth by the government:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to
the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to
contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communications and
technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service
of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

Message-ID: <395ECFA2.EAB19B89@flash.net>
Source record: 85676
Body handling: Binary attachment payload not displayed: dbertone.vcf

This one is in real nice shape and has the original manual.

It was the FIRST user programmable scanner that used the scan buttons as dipswitches to program
using codes from the manual.

16 blinking lights are great to watch and you can lockout any channel using the switches.

It was the first scanner to do away with crystals.

Very collectable.

$150 or take a good regular scanner in trade or trade in as this one should be just sitting in a collectors
shelf. Will consider all offers and trades for anything as I would like to see it go to a good collectors home.

Evereything works fine on it with no problems or burned out lights, loose switches or any other
problem.

[One or more binary attachments are retained only in the source text.]

I also have a DX-100, but it's not a radio, it's an old Yamaha
synthesizer.
It does work on FM (Frequency Modulation) though.
Mere coincedence, or electronic syncronicity?

You don't need that much radio if you have to ask. It has a lot of expensive advantages you will likely never use. Do yourself a favor and buy a scanner that fits your needs, not one that is so complicated you get tired of running to the manual.
just my 2 cents

Radio Shack man can check his computer and tell you the nearest stores that have it in stock. Just tell them the catalog number, and they can probably handle the rest.

No, it is the scanner antenna that has several smaller parts mounted on a short horizonal bar, with a long main boom vertical in the center, I am not sure but it looks like total htg. is about 9 feet, the center boom has a V element going up and another going down from the horizonal bar. Then there is an element looks like bird wings that mount inside both V elements. All the parts are supposed to do everything from 30 to 1300 mhz. Original price was $30 and now it is $9.99 on clearance.

78. Watson 881 Antenna?

Newsgroup: rec.radio.scanner
Date: 2000-07-02 00:00:00 UTC
From: Bill <k9kz@indy.net>
Message-ID: <SiK75.3626$TI1.491495@nntp2.onemain.com>
Source record: 85689

I am considering the Watson 881 antenna for my Icom R2. Does anyone have experience with the Watson 881? Thanks.

Bill K9KZ

I was hesitant to tell this but the cost to repair this rig which Brad paid for was $343. So you see why I wanted to thank Brad publically.

OK, that's kind of good to know. I do not own a license, yet, but let's say
I could manage to take the test for one of the lowest ham licenses (no code)
and
had that on me. Would that be good enough to get the authorities off my
back in most instances if trouble were to brew? I don't expect any trouble
because I don't expect to be doing anything that could be construed as
illegal. The more protection I have, though, the better I'll feel!

Bill, I think there are plenty of good guys, it just isn't common for people to take the time and effort to make an issue of it. I am curious, would you have posted if the radio came as advertised and no problems? I only have once out of 15 or so deals? Not good on my part but I did on the last one so for me that's a start.

Don't forget to send Brad a card during the 2000 holiday season!

Glenn

I am looking for someone that has compared these two radios. I live in Durham NC and the police and fire depo use Motorola radios. Which of the two scanners will do the best here. What is the diffrence in the two radios as far as speed and compatibality with another brand of radio goes. Will they both pick up signals from the same brand of radios? Which is the best over all radio scanner? Thanks for your help. NICK

90. question regarding entering trunked frequencys

Newsgroup: rec.radio.scanner
Date: 2000-07-03 00:00:00 UTC
From: Superman <superman2@usa.com>
Message-ID: <007d211e.1dc7404d@usw-ex0106-046.remarq.com>
Source record: 85551

I have a pro 90 trunk tracker scanner.

One of the police departments in my area usa a motarola type II system.

As you know, with the pro-90, you can only enter 30 frequencys in one trunking bank.

Here is my dilema......

There is more than 30 frequencys used by the p.d., actually there is 25 base frequencys and 3 groups of 5 frequencys that are called GAP FILLERS.

They have 5 gap fillers for the north, 5 for the south, and 5 for the north east.

What are these gap fillers and do I need to enter them in the trunk pool so I don't miss out here and there on the conversation.

At the most, with the pro-90, I can enter 1 set of gap fillers per trunking bank. Do I have to have 3 trunking banks with 1 set of gap fillers in each bank.

Basically, I want to know what the gap filler thing is all about.

I live in portland oregon and the specific situation I am talking about is multnoma county, if that helps any.

Thanks in advance.

I bought one of these 20 ch portables in a yard sale last week-end, and seems to work great - can anyone tell me much about it ?

i.e.
when sold,
who manufactured for RS,
any flaws, modifications?

Bob Parnass site normally tells me about my old radio purchases but is strangely silent on this one. Also, Tandy home pages can't locate any info on this one at all - perhaps a short-lived rig?

Still tuning....

Just use a piece of perf board and a small spool of hookup wire. I would suggest using IC sockets instead of soldering the IC directing in place. This way when you trash it with a bad connection you can replace it easily.

Keep in mind that using a data slicer to intercept MDT transmissions could be illegal. If they catch you they'll arrest you, tear your house apart, take you to the big apple, throw you in jail and probe your anus with a drumstick. So I'm told......

BTW, there is a program that allows you to pump your discriminator directly into your sound card to decode MDTs. Work like a hot dam! So I'm told.....<:-)

No. But it's a waste of time and money. In case you haven't noticed,
analog cellular is going the way of the dodo bird. And besides, if you
get a thrill out of listening in on other people's lives you should
really ask yourself what you plan on doing with yours.

One thing you must remember is that there is Windows software out for
the Ce/HB-232 interface that works GREAT!!!
Works just like the DOS version and has many more features, and
non-standard serial port numbers also work with it, had it up to
COM 32 on a USB Hub and it worked like a charm!!!!

I'm not going any further than to tell you the situation with the law and
that one court case. I will not stick my neck out and say in any way,
shape, or form that any individual can have a mobile scanner anywhere in New
York State and will not get into any kind of legal trouble for it. If you
want to go mobile, you will be taking a risk.

Message-ID: <20000703063053.01768.00001229@ng-fy1.aol.com>
Source record: 85624

An FCC search found 4 frequencies licensed to Haverhill MA FD:

154.010
154.070
154.3625
155.9925

I do not know specifically which might be their dispatch frequency, if they are inputs/outputs to a repeater system and which if any, are county/state mutual aid multi-agency frequencies licensed to the HFD. Plug'em in and see what happens.

Good luck.

Regards, Tom KB2FIK

RecAll timestamps, AND allows you to insert annotations for segments of your recording in the PRO version. The PRO version allows your take full advantage of your stereo sound card recording two different inputs.
RecAll - $15.00; RecAll-Pro - $30.00.

Praise the Lord for federal government intervention. Where would we huddled masses of ignorant backwoods voters be without our legislators passing more idiotic laws to protect cell phone operators. I think our taxes should be increased to pay for some more regulations and agencies to enforce them. Hell, let's just make it illegal to due things that are illegal. All violators will pay a 100% tax rate for their crimes. All will be well. Cellular phone conversations will be safe because no one will be able to afford to buy a radio to listen to them any more. Then the federal government can use that tax money properly, not squander it like us ignorant backwoods voters would. Daddy Government, save us from ourselves!!!!

113. Cybiko Entertainment System

Newsgroup: rec.radio.scanner
Date: 2000-07-03 00:00:00 UTC
From: Robert Barker <rbarker@austin.rr.com>
Message-ID: <I5285.5069$T%3.76038@typhoon.austin.rr.com>
Source record: 85631

In Sunday's paper for CompUSA. they advertised a new device designed for kids that appears to be a gameboy that transmits to other Cybikos up to 300' away. They are $99 (after rebate)

It says you can send photos or play games with people within a football stadium or the mall. Wonder if it will sell as the phone type device by Yes! Entertainment never made it.

Check out the website:
http://www.cybiko.com/

Frequency: 902-928 MHz
Number of channels: 30 digital channels
Communication Rate: 19200 bps each channel
Transmission and Receiving Range: 150 ft. indoors, 300 ft. outdoors (environment dependent)
Max. online Cybiko units: 3000 (100 units on each of 30 channels

These are like little MDT's. You can send a text message to your friend 300' away
Users can go to the website and download additional games to play.

Cybiko: a multi-functional communications computer - is your wireless, high-frequency, digital connection to other Cybiko devices. The possibilities are endless with this powerful pocket communications computer. See Product Layout.

With Cybiko you can:

Digitally communicate with other Cybiko computers with a high frequency RF transmission.
Play interactive, wireless games such as Lost in Labyrinth with one or more of your friends.
Play CyLandia where you can raise your own cyber pet Cy-B and you can teleport him wirelessly to a friend. Your Cy-B eats, sleeps, gets a job, can fall in love, get married and have baby Cy-By's.
Chat wirelessly with one person, a small group, or up to 100 people simultaneously in your local network. E-mail anyone on the internet, plus read/write your E-mails offline.
Find a friend or find someone new in malls or theaters - virtually anywhere. And MORE!
Every single day you can download a new game or application FREE.

WHAT YOU GET
Wireless Entertainment Applications:
Wireless Chat
Friend Finder

People Browser
Multi-Player and Single-Player Wireless Games:
Lost in Labyrinth
CyLandia
Billiards
Solitaire
and more, more, more

Business and Personal Applications:
Personal Planner
Alarm Clock
Calculator
Address/Phone book
Phrasebook
Text Editor and Journal
Graphic Editor*
Music Composer*
Organizer (Task Manager, Daily, Weekly, Monthly, Calendar)*
and more, more, more

PC and Internet Connectivity:
Internet e-mail via link through your computer
Cybiko data-exchange with the personal computer
Uploader and File Manager
All hardware to download new programs from the Internet
Software available here.

My 3 year old scanner died. Picks up only the CB 1-40 band at close range to the transmitting radio. I was wondering if anyone had fix ideas before I ship it back to Uniden.

It seems if the antennia is not working. I will try a new one, see if it connects better and saves me the repair.

Ideas?

Thanks

Scooter

> wanna help people.

I never said or meant to imply differently. You and one bozo seemed to assume a lot from my 7 words.

> We are the biggest family in the world.
> Firefighters

The brotherhood or local boys might disagree.

> You wouldn't/ couldn't understand.....coz your
> NOT a Firefighter.

I find it hard to believe you are one too. A firefighter would NEVERwish for the public to share in the horror and misery people suffer through fire and accidents. The whole body of "A Fireman's Wish" is that he wants EVERYONE to have to see the horrors he deals with and the heroic deeds he performs. Are you telling me this is the desire of a fire fighter? For 23 years you walked around wishing we all had to see what you did? Wishing we all would know what a hero you are? Poppycock!

> but despite your comment.....one of us WILL
> rescue you, or save YOUR property, or render a
> humanitarian service to YOU in YOUR lifetime.

That's what the job is all about Dave. That's what you are paid for. I will thank you again and again. But if you think because you choose a profession I should have to see the sadness and horror you do (as "A fireman's Wish" insists), well piss off , you spent 23 years in a profession for the wrong reasons.

Glenn

```
PCSCAN DOS Scanner Program for the Optocom and other radios
============================================================
New version available!

http://www.micosyen.com/radio.htm

Several bugs fixed.

New features added:

- Optocom support at over 50 channels per second
- CTCSS decoder display
- Auto seek to new trunk control channel
- More efficient handling of trunking bit stream
- Channels-per-second display
- RS-232 status display

This is still the best free computer-radio scanner program available at
any price.
```

134. Capacitor Question

Newsgroup: rec.radio.scanner
Date: 2000-07-04 00:00:00 UTC
From: Greg Renner <grenner@uswest.net>
Message-ID: <39629956.AB563DED@uswest.net>

I picked up a old RS scanner at a yard sale and it was not functional. Upon opening it up there is a blown electrolytic capacitor in it. It appears that someone tried to drill a hole in the back of the scanner and drilled the cap too. At any rate it is rated 2200 micro farads at 25v. The only one close I see in the RS catalog is 2200 micro farads 35 volts or 2200 micro farads 16 volts are either one of those ok to use or do I need the 25 volt one.

Thanks

Greg

Use the 35. The voltage rating on a capacitor is essentially "I can
handle this much juice before I explode", so if you use one rated
higher, there should be no harm done, so long as the capacitance is the
same. Using the one rated for 16 volts may (quite unlikely in this
application, but possible) cause problems.

Am I missing something? You tried a computer with a battery that had
been off charg for several days, it dies after booting, and then you
"check" the second computer with the same dead battery- taking its
failure as evidence that the computer is bad?

At this point, I dont see that you have made a valid test on anything.
Until you test the computers with known good batteries, or a power
supply, you dont know enough to have a complaint.

Due to changes in my life several of my hobbies must go...
To that end, I am offering the following as a package deal...
Radio Shack Pro 2051 (1000 channel)
Radio Shack Pro 94 (Includes A/C adapter) (1000 channel)
Sony SC-1 (non PC version) (300 channel)

All in perfect, mint condition. All include original box
and manual. The Sony has never been used at all. The
Radio Shack units have seen very little use.

This is a package deal....$425 for the whole
enchilada, shipping and insurance included.
No COD, no Paypal, sorry. My e-mail addy is my Ebay
ID if you with to check my creditability.
Payment by Postal money order ONLY.
Respond by e-mail, please.

Pretty much the same law in Florida -- you have to have permision by the local cops, be a reporter, or have a ham license.

Like one guy on the posted follow ups said -- get a technician license -- almost giveaway now.

keep you legal until law can get changed, which isn't likely in this every increasing "walk the line" politicaly correct society we have created. (Nein, I did not say this -- it was a false post! Seig Heil Clinton und Gore, ve are correct here!! don't send your ATF or FBI storm troppers here to make it correct!)

Hi all,

I have a pro-37 on the way, but it doesn't include an adapter with it... on the radioshack site, there is online docs for it which state that it's ok to use a non-radioshack ac adapter, but not a non-radioshack charger.

Any comments on this? Seems to me that 9v/300mA is 9v/300mA... is the charging circuitry really this sensitive?

Thanks!

PS - Anyone know where I can get one at a good price?

154. Re: Fireman's Wish

I get the feeling that Glenn is one or more of the following:

A) Feeling sorry for himself because he tried, and failed, to be a firefighter.
B) Disgruntled because he was a firefighter, screwed up, and was fired.
C) Tired of his meaningless job and wishing he was a firefighter.
D) Just a total idiot who needs to get a life.

I'm getting a little sick of people like Glenn. People who constantly complain and whine about their city's Police and Fire Departments and how they are not worth the property taxes they pay. But these same whiners call the police or fire department in a heartbeat for meanial things like "a kid walked across my lawn", or "my smoke detector has this annoying beep". Then you whine and complain some more because they didn't get there in less than 30 seconds.

People like you will never be satisfied, no matter what anybody does. I have an idea, Glenn: Find the darkest corner of your house, curl up there, and never come out! The world will be a much better place for it.....

Garth Mattson <mattson@mb.sympatico.ca> showing his onability to comphrehend spewed.....

> I get the feeling that Glenn is one or more of the following:

Rather than use you warped "feeling" try reading what I wrote.

> A) Feeling sorry for himself because he tried, and failed, to be a firefighter.
> B) Disgruntled because he was a firefighter, screwed up, and was fired.
> C) Tired of his meaningless job and wishing he was a firefighter.
> D) Just a total idiot who needs to get a life.

You certainly have me convinced you modeled "D" after yourself.

> I'm getting a little sick of people like Glenn. People who constantly complain
> and whine about their city's Police and Fire Departments and how they are not
> worth the property taxes they pay.

OK Mr Garth Moron, where did I say or even imply that. CAN YOU READ? Show mw where I complained and whined about ANY department.You can't. You are full of it!

> But these same whiners call the police or
> fire department in a heartbeat for meanial things like "a kid walked across my
> lawn", or "my smoke detector has this annoying beep". Then you whine and
> complain some more because they didn't get there in less than 30 seconds.

Sounds like you are relating your own actions Garth. Again moron, where did I complain??

> People like you will never be satisfied, no matter what anybody does. I have an
> idea, Glenn: Find the darkest corner of your house, curl up there, and never
> come out! The world will be a much better place for it.....

Take you own advise Garth, but first learn to read. Not once did I bad mouth or show a lack of support for firemen. You just are too stupid to comphrend what I wrote. Anybody in any profession that deals with human suffering and tragedy is screwed up if they wish for the crap the author of "A Fireman's Wish" does. Has nothing to do with support or any of your spew Garth. You couldn't have read what I wrote or you wouldn't say such moronic things

unless you are a moron. Sheesh!

Glenn

FIrst off you do not need to use the DOS software unless you have a
spare system to dedicate to it. If not then have a look at the
Pro-Turbo software at:
http://members.home.net/pro-turbo/index-main.html
It does everything the DOS program does, but htis is a full 32bit
program and has many more features than the DOS software.

Also if you want a CE/HB-232 send e-mail to Bill's wife at:
"Cindy Cheek" <ccheek@comtronics.net>
and give her time to resopnd to you, I have just recieved an e-mail
from her and all her time is spent caring for Bill, but she will
respond to you and is still selling the kits.

Cheers

Len

Actually, I tend to agree with Glenn. Whoever penned the
poem, if they are on the job, needs to consider counseling.

If the job has hit them as hard as the poem makes them
out to have, then yes, they have problems.

I personally do not wish all the things that the author
wishes on people on anyone.

I also think that poems, sayings, etc are usually a bit too
corny for my tastes.

Hi Glenn,

As you so rightly quote.....READ WHAT I WROTE.

The author of The Fireman's Wish is not really that he wants Mr Public to experience the horrors of his job but just that Mr Public understands that is HIS JOB.

Yeh, I've been in the 'streets' for 23 years, and NO not for the wrong reasons. Why can I say this ??

Again easy, it's NOT all death and destruction, I've managed to save a few lives in my time, I've even helped deliver a child for one Lady.

I've had some really good times with Mr Public when he/she's managed to get 'stuck' in an awkward situation.

Of course we all get those doom and gloom times but the up-side always makes them seem so far away.

Yeh, we have those who call us just to say the smoke alarm needs the battery changed but usually those people have no-one else in their miserable life.

I'm a Firefighter, but sometimes I have to just be a good listener, a friend and most of all a BUDDY.

You seemed to concentrate on the negative side of The Firemans Wish, I suggest you look at the positive side.

You don't have to see what it says, there are thousands of guys who do it day and daily.

And as for the brotherhood.....well or the local boys.

I've never met them, but I've been all over the world and I've always found a brother in every city, town, village that I've stayed in.

We have a common bond, which only another Firefighter can understand.....and even the brotherhood or local boys WILL need us at some time.

Dave Gibson
Firefighter

Do you think though that the Florida State troppers would give one a hard time about a scanner turned off and in the trunk like in Michigan? That is the mani point of my post, about a scanner being locked up in a trunk and still the Michigan State Police say that is not legal.

For most of the big electrolytics you have a big choice. That sounds like a filter for the power supply. anything from about 2000 up to 4000 mfd could probably be used. The voltage rating is the minimum you should normally use, but it will not hurt to go bigger. Wouldn't really want to go much over 50 or 75 volts as sometimes they do not form like they should, but if 100 volts or more was handy and free, I would try that. By form , the electrolytics are actually damp inside much like the dry cells are. Not totally dry. The plates of the capacitor actually change properties as voltage is applied to they.

Hello all,

I've been hearing skip frequencies all day. Mainly in the 39's, 42's, 45's,
and up to 46.5.

I've put in my scanner, frequencies in Arkansas, Connecticut, Kansas,
Illinois, North Carolina, and Michigan. These are areas I've heard
last summer. Give a listen and hear other comms.

The wording of the Michigan law is pretty sloppy (why don't we elect people who understand what they're doing?) I'm not a lawyer, but it seems that pulling folks over as they leave Radio Shack with the newly purchased scanner packed away in the trunk isn't quite the sort of thing that the courts like to see.

Don't waste your time asking the police. All they can tell you is their policy. They're not qualified to interpret the law. Unfortunately, someone might have to force it to a court to rule exactly when you can and cannot transport a scanner in your car. Perhaps clarify the intent of the law.

As a former resident of Michigan (30+ years) and Florida (not quite 2 years) with about a year working in southern Georgia to finance the last leg of the trip, I can tell you that, as a group, MISP are a bunch of assholes with severe control-freak mentalities. Mussolini would have been proud to have 90% of them.

People bad-mouth the "good ol' boys" of Georgia. They're the people who have never encountered a Michigan state trooper.

If you get pulled over by one of Michigan's troopers, you're going to get a citation of some kind, guaranteed, even if it means busting out a tailight for you because they can't find anything else. Something like an un-papered scanner in the vehicle... Whoooooo! Jackpot baby! Might even be able to turn it into a full-blown felony arrest if we can just get the poor bastard behind the wheel pissed off enough to talk back to us! And of course, if they've got a scanner, it's probable cause for a full search of the vehicle to see if there's so much as a 30 year old pot seed under a floor mat. If we can find one, we can impound the car, AND arrest the poor schmuck! (Hmmm... how handy... I happen to have a couple seeds right here... Yo! Captain! I think you ought to see this!)

Florida troopers were, in my experience, MUCH more laid back. As long as the scanner was off, and you were polite, they seemed to not give a damn about it. Never got pulled over in Georgia, but did have some dealings with the Albany Sherriff from time to time. They were always decent folk, even if some of them were a bit... "slow on the uptake", shall we say.

From: monte.carroll@nashville.com
Message-ID: <39628a95.11328702@news.nashville.com>
Source record: 85515

My wife and I just returned from Anaheim, California where I spotted what appeared to be some type of rotating antenna on top of various billboards. The antennas, two on each billboard I noticed, were likely dipoles. The elements were horizotal, about 8 to 10 feet each side, and were spinning. Picture the billboard as an aircraft wing pointing straight up. The antennas would be the propellers, spinning much slower, of course - more the speed of a radar antenna. And they weren't in sync. Any ideas what they were? I think they were on Orangewood Avenue a couple or three miles from Disneyland.

Long way back, when everyone and their brother were using PD (the
pocsag program), then trunker and the hammcom interfaces, I built
every single one that a schematic appeared for. I had ok results. One
day I bought that dualbifet by mistake and decided to try to make the
simplest interface possible by looking at every available schematic.

That is what I came up with. It worked at 99.9% decoding with trunker
and controlled my OS456 on the same port! I even fit it inside a DB-25
shell! I was in heaven, I promptly drew that easy to follow schematic
so other people might have better luck with building one.
Point is, I have very little EE knowledge...nothing I didn't learn
building these simple interfaces. You can debate the design until you
are blue in the face, but three years later it is still working for me
100% perfect!!
Also works awesome on MDT, POCFLEX, WINFLEX and the others....

Nothing in communications is 100% perfect. Communications is a game involving bit error rates and signal to noise ratios. No analog circuit works flawlessly. After all, it's analog.

Why not see if you can make it better. The bypass caps are cheap, and small. It will still fit in the DB25. A simple way to "disarm" an unused op amp is to connect the output back to the negative input, and tie the positive input to ground. No components needed at all.

>
>
>I know many old cordless phones come in the low VHF bands particularly
>in the 42-48 mhz regions. I wonder if there are still many old phones
>out there operating at that frequency or are they the thing in the past
>and now all 900 mhz phones??????
>
>
>
>Kevin
>krobokoff@hotmail.com
>
>
Here in central Kentucky the "older" 49MHz phones are still
very common. Very Few [percentage wise] of the new 900/2400
phones. A drive through the upscale areas show more of the
newwer phones but even there the older ones are more common.
There are even quite a few of the old 1.8MHZ/49Mhz units
still going.
Most of the "kiddies" are leaving the 49MHz "HT" behind
and jumping on the FRS with a few well heeled ones
migrating to the VHF marine band.
Please do not flame me, I am just reporting what is going
on.

Source record: 85529

FOR SALE:

Like brand new, complete with box, manual, software!
ONLY: $250.00 shipped within the U.S.!

Bill Crocker

Mfg. Site: http://www.optoelectronics.com/optotrakker.htm

The Optotrakker is a communications decoder that when interfaced to a computer, will quickly and easily turn a number of receivers into a trunked radio tracking receiver. The Optotrakker can also interface to virtually any receiver for the decoding of CTCSS, DCS, LTR, Motorola Type I and II, and DTMF, in a non-PC application by displaying data on its two line LCD display.

WHAT CAN THE OPTOTRAKKER DO FOR YOU ?

The Optotrakker used with the supplied TrakkStar Windows software, is the first and only product that can scan multiple types of trunking systems on any frequency band at the same time. The Optotrakker allows you to now scan Motorola 400MHz, 500MHz, 800MHz systems, as well as the 900MHz systems, simultaneously with rapid speed and data capabilities. Using an exclusive pass through technology, interfacing with future receivers will be easy as the Optotrakker requires the use of only one com port. Supports ICOM R7000, R7100, R8500, R9000, R10, AOR AR8000, and AR5000.

Decodes CTCSS, DCS, LTR, DTMF and Motorola talk group ID's
Scan multiple trunked systems simultaneously
All trunked frequency bands supported, including 400MHz, 500MHz, 800MHz, and 900MHz
Interfaces to virtually any receiver when not under computer control
Supplied with TrakkStar Windows trunk decoding software
Built-in Data Slicer for decoding of FSK programs
Two Line LCD display
Interface cables supplied with OptoTrakker

Power 7 - 15VDC
Size 1.8" high x 4.5" wide x 4" deep

Discriminator audio audio modification to receiver may be required.
Software Requirements:
Windows 95 or 98, (Windows 3.11 not supported)
IBM PC compatible, 486/586,
VGA display, mouse and hard drive.
Minimum RAM: 8 megabytes.
One serial port required.

214. CHP 42.60 and 39 MHz freqs

Newsgroup: rec.radio.scanner
Date: 2000-07-05 00:00:00 UTC
From: Harry Marnell <marnells@snowcrest.net>
Message-ID: <8jvopoqbm1@news.snowcrest.net>
Source record: 85530

42.60 IS a CHP frequency, as "Copper" and "Turquoise" base half. For Northern Calif, I show Solano (Office #22) as using Turquoise.

If you go to the SCANnorCAL "Files" page at http://www.egroups.com/files/scannorcal , you'll find a somewhat dated but fairly accurate listing of all CHP freqs.

Which leads me to: If anyone has a more up-to-date CHP list to add to either the "Files" or "Links" section, please help yourself. The above page will step you through it, and I BELIEVE it's available to all "egroups" subscribers, even if you don't subscribe to SCANnorCAL specifically.

Subject: CHP ?

Harry, Good morning to you and all the listers;
I started doing a limit search of the 42.000-42.999 freqs on the CHP and I kept getting 42.600. I cannot find it in the CHP listing, yet it shows up in the latest Police Call book from RS, it shows that freq. from Woodland as being under the police usage. Is it in fact CHP or a local police freq.? I wonder who may know what it is. It DOES NOT show up in the 1993 ed. of

the NATIONAL HIGHWAY PATROL FREQUENCY HANDBOOK by Scanner Master Corp, 2nd printing. What do you know about this freq.?

Also, are there any 39.??? freqs. for the CHP that you know of? I thought I saw something about the new freqs. some time ago. Can you clear that up? Thanks in advance, Bob

You can put the bigger one in. It won`t hurt a thing. 2200 at 50 is ok as well, if you can fit it in there. Just don`t put one in with a lower rating ! And be sure to observe the polarity , and get it the same as the old one was, when installing it.

Frequencies 70MHz and higher are line of sight. If you have hills, you are going to need a higher antenna. The bigger and higher the better. Get yourself a discone and run it up 40' or so. If you do, don't forget to used a good low loss co-ax, or you will also need to put a preamp up on the antenna.

But, like always in radio, money spent is best spent on the antenna.

cheers

The scanner has to be on and actively listening to you local NOAA weather channel. When you are listening, push the PRI/alert button to the left of the weather button. The word Alert will show on your screen. If you local NOAA channel sounds an alert then your scanner will sound that alert. While in this mode the scanner is useless for anything else aside from listening for that alert.

238. Having problems with PA State Police Frequencies

Newsgroup: rec.radio.scanner
Date: 2000-07-06 00:00:00 UTC
From: Bob Mergner <rmergner@nojunkmail.hworks.com>
Message-ID: <zNZ85.26$iv4.12424@dfiatx1-snr1.gtei.net>
Source record: 85463

Hello,

I am a newbie to this whole scanning thing, and have found a couple different web sites which list the PA State Police frequencies. In each case they list either a base and a mobile frequency, or a TX and RX frequency. I assumed that this meant that I would hear the dispatch on the base frequency, and the reply from the mobile unit on the mobile frequency. While I do hear the dispatcher on base, I never seem to hear the responses from the mobile units. This is in spite of the fact that in many cases, the mobile unit in question is quite close to my location. I can hear both sides of conversations from other PDs as far away as New Jersey, so I don't think it's a signal strength issue. What am I doing wrong? Also, what bearing does the PL number have on things.

Sorry if these are basic questions, but I've read a couple of newbie FAQs on scanning on the web and here, and have found nothing that addresses these questions.

Thanks for your help,

--

Scanner listening is an art--learning to guess from what you know, or
finding little bits of info that help you with a solution is part of the
fun.

I used to live in PA (Pgh area), and I didn't listen to the troopers, but
the few times I tried, I wasn't very sucessful either.
Freq. band plays a part in how far away you hear it, how high your antenna
is, what scanner you are using, etc. The difference in having a antenna in
the house, and putting a Radio Shack cheapo on the roof 10' high, are
phenomenol (sp?).

I can't answer you question, but I can tell you to try asking either the
local police (asking a city or county cop about state freq. might yield
better results than asking about their own department, or a paramedic, or
fireman), or find someone else using a scanner in your area, and asking
them. Look for local hams, or visit ham fests in your area. If you like
scanning, ham radio might interest you anyway :)

Maybe call the main library around you, and asking the research department
(If nothing else, call the Carnegie library in Pgh--they have an *excellent*
research department, and are used to answering simple, to odd, questions.
Many ppl don't realize the large libraries do this :)

Again, I'm sorry I couldn't answer your question directly, but hopefully
I've given you a good start on where to look

That would only require a patch cable (mini to mini). The only need
for software would be for scanner control or VOX recording.

I don't know what the antennas that you saw are for, but I do know that the cell phone companies stick some of their antennas in between doulble sided billboards. I read that they even use fake trees that are used for cell antennas. Around here (Milwaukee Wisconsin) I have seen the in all kinds of places. They like to put them up on the high voltage towers.

How about picking up UHF traffic from approx 150-200 miles away on a
handheld radio inside a house?

Or, better yet, how about monitoring trunked systems from 150-200 miles
away that walk right over top of the local departments?

That's what I've been doing the past month.

Also, I have picked up Oklahoma, Illinois, Missouri, Mississippi, Louisana,
& Florida lately. Mainly in the VHF Low & High band areas.

This is from Cleveland, Ohio.

In PA, the base stations are remoted to a high mountain or tower. That means they are
transmitting and receiving their mobiles from a good location. The reason you hear the
base stations well is because of the good location. They can hear their mobiles also because
their receiver is at the same good location. If you were on a mountain with your scanner you
would hear the mobiles as well as they do. From what I have heard, they are eventually going
to a digital network (not just trunking) and you won't be able to pick them up at all
anyway.

And don't forget that there are a few barracks (not many) that run by
a repeater, so you should hear everything on 1 channel. PSP will run
by digital in the future, but I'll believe it when I see it! This
ambitious radio system probably won't cover all of PA, so I assume
that a few will still be on the old system.

FIrst off you do not need to use the DOS software unless you have a
spare system to dedicate to it. If not then have a look at the
Pro-Turbo software at:
http://members.home.net/pro-turbo/index-main.html
It does everything the DOS program does, but htis is a full 32bit
program and has many more features than the DOS software.

Also if you want a CE/HB-232 send e-mail to Bill's wife at:
"Cindy Cheek" <ccheek@comtronics.net>
and give her time to resopnd to you, I have just recieved an e-mail
from her and all her time is spent caring for Bill, but she will
respond to you and is still selling the kits.

Cheers

Len

With your attitude, it's no wonder why you might have had some
unpleasant
experiences with MSP, and I'm glad you're gone from Michigan. But
beyond that,
I'll state the semi-obvious -- your diatribe about MSP bears almost no
resemblance to reality.

> Florida troopers were, in my experience, MUCH more laid back. As long as

Gee, maybe Florida doesn't have a law regulating them in automobiles
like Michigan does (Michigan Compiled Laws 750.508)?!!

Once they go digital, will there be any scanners that will be able to receive them if they don't encrypt? I hope that's not an obvious question, but I'm new to this.

Thanks,

Bob

THats the problem with the Army and Airforce in the USA, they think they can use any freq that they want to use for whatever reason they want whent hey want. A friend of mine years ago was on and HF freq running a monster beam and amplifier and got told to get off the freq he was on becuase they were going to start using it and they tried to use it but he kept talking to who he was talking to and they told him again to get off, he told them he was on here legally and was not about to leave and if they wanted to do something about here's my callsign and that they were the ones out of band and trasmitting ilegally and they then shutup and left.

FOR SALE:

ICOM IC-R8500 Communications Receiver, purchased BRAND NEW May 31, 2000 (I have a receipt) Original box, AC Power Supply, 12VDC Power Cord, and Manual. All in "exactly like new" condition!

Paid: $1458.00 (with tax), selling for: $1200.00

Also have optional Icom RS-8500 PC Control Software, with RS232 interface cable, and Icom SP-21 Speaker, that I can give you a good price on, if interested.

Thanks,
Bill Crocker

Frequency Coverage:
0.10000 - 823.99999 MHz
849.00001 - 868.99999 MHz
894.00001 - 1999.99999* MHz (*guaranteed: 0.1 - 1000 and 1240 - 1300 MHz)
Mode: SSB (USB,LSB); AM (Normal, Wide, Narrow); WFM; FM (Normal, Narrow); CW (Normal, Narrow*) (*optional filter required)
Number of memory channels: 1000 (plus 20 scan edges and 1 priority channel)
Antenna connector:
Below 30 MHz: SO-239 (50 ohms/Phono [RCA (500 ohms)])
Above 30 MHz: Type-N (50 ohms)
Usable Temperature Range: -10°C ~ +50°C; +14°F ~ +122°F
Frequency stability (in FM mode):
Below 30 MHz: ±100 Hz (optional ±20 Hz)
Above 30 MHz: ±3 ppm (optional ±0.6 ppm)
Tuning steps: 10, 50, 100 Hz; 1, 2.5, 5, 9, 10, 12.5, 20, 25, 100 kHz; 1 MHz or programmable (0.5 - 199.5 kHz/0.5 kHz steps)
Power Supply Requirement: 13.8 V DC ±15% (negative ground) or 117/220/240 VAC (with AD-55/A/V)
Current drain (at 13.8 V DC):
Standby: 1.8 A
Maximum audio output: 2.0 A
Dimensions: 287(W) x 112(H) x 309(D) mm; 11.3(W) x 4.4(H) x 12.2(D) in
Weight: 7.0 kg; 15.4 lb.
Receive system: Superheterodyne
Intermediate frequencies:
1st: 48.8 MHz (0.1-29.99999 MHz); 778.7 MHz (30.0-499.99999 MHz); 266.7 MHz (500.0-1024.99999 MHz)
2nd: 10.7 MHz (0.1-29.99999 MHz); 10.7 MHz (30.0-499.99999 MHz); 10.7 MHz (500.0-1024.99999 MHz)
3rd*: 455 kHz (0.1-29.99999 MHz); 455 kHz (30.0-499.99999 MHz); 455 kHz

(500.0-1024.99999 MHz) (*except WFM)
Sensitivity (typical): Frequency band (MHz) SSB/CW AM AM-N AM-W FM WFM

Know what? They can. 6 meters is SHARED with government. And the rules
they operate under in fact DO allow them to use any frequency at all, on a
non-interference basis. In an emergency, they have priority over regular
users.

This may shock you, but in all shared bands between ham and government, as I recall, hams are SECONDARY users.

We get to use MILITARY/GOVERNMENT bands, sometimes, IF _WE_ don't interfere with them.

Many ham bands EXIST only because they're primary military/government bands, and thus haven't been taken for commercial use.

They have a perfect right to tell hams to shut down, if they're interfering with government use.

This applies in the 420 band, for instance.

In the US proper, the military tends to avoid shared band areas as much as possible, as a courtesy.

Military combat com-packs, at least the older ones, are 30-76 MHz. They can, and do, use ANY part of low band. They have set up in-US blocks in the low band, some are used by them, some by commercial users... but they can operate anywhere in low band, on non-interference basis.

The best omni with that wide band coverage is the Nevada ANT-426
Double Discone (actually a bicone). It'll provide some gain over
a standard discone (I want to say 3dB but I can't recall) and cover
that range fairly well.

This is for anyone looking for non fed. gov. freqs,
As far as I know all non federal gov. radio users must register with the FCC, perconcorp.com has a database that listes ALL fcc registered radio users and transmitters in the us. This site is useless for military or dod etc... but from McD's to the local paper mill down the street, it is very usefull.

Realistic Pro-2004. One of the finest scanners ever made. Coverage from 25-1300 MHz, loaded with features, blue backlit LCD display. Mods done. One owner. Mint condition.

400 Channels, Hyperscan, etc.

Owners' Manual and telescoping antenna inc.

Unit was pulled by ebay due to scanners being "questionable" for sale there.

See my profile on ebay (jroosh) for my transaction history.

$180.00 plus shipping. I will pay for shipping materials.

See a picture at

Just use a some wire. The white plastic thing is just so the machine
that puts the parts on the circuit board can grip the wire.

The things are also called 'zreo ohm' resistors. The plastic has no
electrical use. The machines are already set to install resistors of a
standard size, so if a short jumper wire is needed, the zero ohm
resistor is used.

Wow Len, sounds like your friend is a really cool person! Actually,
I'm not sure if I'm falling for a troll, or if you & your friend are
really just kinda dumb people.

Just in case it is the latter, was your friend on an amateur radio
freq, or perhaps it was CB channel 6...

If he was a ham, transmitting on ham freqs, I believe the FCC could
have cited your friend for technically communicating with an
'unlicensed' (meaning specifically, an amateur radio licensee) station.

Too bad they didn't do that, and too bad this "they" that you imply to
be an AF or Army station couldn't HARM your friend.

Yes, I agree with all the responses so far to your question. I had the EXACT same thing happen to my AR8000 as did yours - i.e., it suddenly went deaf one day. Pulled it apart and the white thingy lost one of it's leads. I though it was a resistor or a diode or something, but strange that it was on the antenna lead. I removed the white thingy and the disconnected lead, then redid the connection with a piece of stranded wire. The scanner works the same.

The reason it came apart was cuz the antenna connector came a bit loose. So, as long as you have it apart, take the time to CAREFULLY tighten the silly threaded spanner nut on the inside of the antenna connection. It tends to work loose. Tighten it now so you don't have to pull the thing apart again a few months from now. I am lucky enough to have had on hand a pair of small needle nose pliers with a bent tip. I used it to tighten that silly nut, as it has two small slots on it. They couldn't have made it more inconvenient. That nut should have been on the outside.

The local police 820-860 MHz.
The noise precludes voice transmissions, so locking out the channel
won't work, and it happens on all channels. It does not happen
constantly, but very often. They have an
Erricson system, and I can't trunk track it with my BC235xlt.

Let me throw in soome comments. I have been a paid firefighter.emt for nearly 11 years. Is it a good job? Yes, but to me it is just that, a job. I am grateful to have it, and I do enjoy some aspects of it, but it is my job, not my life. When I leave at 8 am after 24 hours on, I am just "Ed" again, I leave the rest there. Some people cant do that, they have to be a firefighter 24 hours a day every day. We deal with a lot of stuff we would rather not have to, but thats part of it. Lots of guys sit around chomping at the bit waiting for the next alarm, I'd be much happier if it did not come in. Spending 24 at the station without turning a wheel is my goal every shift. Sure I like to fight fire, but if I am doing that, somebody else is probably having a bad day because of it, and that is not good. Also I like most of the guys I work with, but they are not my family, just co-workers and friends. I dont know about having a family in other cities, when I travel I go as a private citizen and leave the job behind. If I had it to do over again would I choose this profession? Probably not. But for now it pays the rent and allows me time to go back to school and get a degree so that one day I may be able to do something else.

Just my thoughts guys.

You must live in a city. Don't buy a pro 2030--they really pick up data well! Sounds like data transmissions, like microwave that commercial business beam from one location to another, to connect their LAN. Or it could be some other transmission, maybe from a different frequency, that you are so close to that it is bleeding into your frequencies. Sometimes I get them blanketing 5 or 10 frequencies in a row, just blasting me out, I have to sit here and punch the arrow button on scanner over and over, very annoying. Some scanners have limited skip features, but also annoying because you have to go back and unskip it later or you just lost that frequency. It is a lot like when your next door neighbor puts a linear amp on his CB and then bleeds into every channel on your CB--the radio can only handle so much signal, then it just overloads and gives it to you.

Anyone considering the purchase of a Sony peripheral for their computer might want to give it some further thought. There clearly is not a reciprocal relationship between what they sell and what they service.
-
I purchased a CD-RW drive back in April that just recently went bad (won't read). When I called Sony service, I was told that I could not get a replacement and that I had to ship it across the country to be "repaired" (and we all know what that means...) - with a three (3) week turnaround. Assuming that they keep their 3-week commitment, with shipping both ways, I'd be without the use of the unit for at least five weeks!!!
-
I hardly think that's reasonable or fair.
-
Compare this to HP, who under the same circumstances would simply ship you out a replacement unit and issue a call-tag for the old one.
-
Sony is a behemoth in the marketplace and as such, they have an obligation to scale their service facilities to meet demand. To not do so is an indication of their lack of commitment to customer satisfaction and an unwillingness to stand behind their products.
-
Buyer be ware!

Oh it is so easy, then why are the ones I see later so SCREWED UP! Solder blobed everywhere, some guys must be plumbers and use the torch to solder, circuit board cracked where someone tried to remove it without unsoldering the antenna connections, the plastic case on mine is burned where some joker rested the soldering iron against it while soldering, then usually half the screws are missing because they lost them, probably while waiting for someone else to come finish the job, and tiny metric screws are not available anywhere but as a complete package from Radio Shack mailorder. I would not want a scanner that some amateur had been practicing on, the pro 43 is a multiple circuit board, soldered together, hard to work on scanner, you cannot even get a tool around the nut to tighten the antenna mount without tearing the scanner apart, it is not a good scanner to learn on. Just my 2 cents.

The feature proved worthless to me--during the bad weather seasons, which is most of the time here, it goes off every day. Really annoying to get the rain coming alert at 2 am. Although I am sure someone could use that information.

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

Radio shack has the best price, about $9. The tip is the old large style on that adapter and they may not have it in stock. If you have another 9 volt DC adapter with at least 300 milliamps, make sure it has NEGATIVE TIP! Most adapters are positive tip and will ruin the scanner. That scanner is worth a lot more than $9.

No soldering/desoldering is required to replace the keypad. Of
course, you'll need enough manual dexiterity to handle tiny
screws and patience.

For jobs that do require soldering, sometimes the soldering iron
comes with instructions. Also, I think Radio Shack has a booklet
on soldering. For practice, just use an obsolete (worthless) PCB
board, once installed in a computer. If you don't have any
around, then electronic surplus stores often have these things
for next to nothing. It doesn't take very long to master a
technique for soldering a wire. OTOH, I wouldn't recommend
trying to solder a 100-pin chip onto the PCB board.

Well really is an easy job for someone that want to look at ho wit
is put together, no it is not a 5 minute job, but if yo look at how it
is put together you will see how it comes apart and it can be done
without unsoldering anything. I remember when I first took mine apart
to mod it to 800 channels, I did a little more work to it than needed
to get it apart, when I did the keypad it was apart in a couple
minutes and the keypad replaced and back together in less than 10
minutes.

Cheers

Len

Don't forget that discone antennas have ZERO gain, you need gain. Get a log-periodic antenna (a TV antenna) and mount it vertically (elements up and down), they are normally mounted horizontally (elements to either side). This antenna is directional and you just point it in the direction you want to hear, a rotor can help.

Yes, I've heard them all again today(7/8). I've been using 'Betty Bearcat
Starter Frequency Guide' to pick the states and frequencies.

Today I monitored: 39.32, 39.58, 39.24 Maryland SP; 42.06 Missouri SP;
44.74, 42.34, 44.98, 45.06, 44.94 various states; while driving with RS
mag mount antenna and BCT-7, listened to Ill., MD, MO, KS, NC; all
were good signals.

> where these new freqs can be found or any other info??

I received this through e-mail. It explains what LACoFD has done to
reconfigure their radio tac channels. I typed in some of the most used
freqs. I don't know if it is correct. Even though it is explained below,
I am still confused by it.

The most significant change in the 2000 VHF Radio Plan is the increase
of Department
tactical radio frequencies from four to eight and the movement of these
frequencies from
Channels 1-4 to Channels 17-24. This was done to accommodate four
inter-agency Rapid
Intervention Crew communication frequencies. These four mutual aid
frequencies are
being licensed at the request of the Los Angeles Area Fire Chiefï¿½s
Association and are
intended for use as rapid intervention crew communication on
multi-agency incidents. The
Department also took this opportunity to complete the following VHF
radio frequency
enhancements:

Discontinued the use of State TAC 3 (TAC 7) as a primary Los
Angeles County Fire
Department tactical frequency that is still available for mutual
aid/automatic aid
incidents.

Utilized the group or band feature of the Kenwood mobile and HT
radios, and
grouped similar frequencies making them easier to find and easier
to scan.

Added a bank of marine frequencies, including the Lifeguard
tactical frequencies and
the most common marine channels. The marine channels are being
programmed to
"receive only" because our radios are not certified for marine use.

The full VHF program includes 144 channels, with some frequencies repeated in different
groups. Since many older radios do not have the capacity to hold all the frequencies, the
plan was developed to take these limitations into account.

Some of the oldest radios (Motorola Spectra Mobile Radios) will hold only 64
frequencies, so the first 64 frequencies are those felt to be mandatory.

The MT1000 HT radios used by the majority of the company officers will hold only 99
frequencies, so the first 99 are those most commonly used.

The full 144 channels will only fit in the newer Kenwood radios, both mobile and
HTï¿½s.

UHF RADIOS

There are no major changes to the UHF Radio Plan. The Department did take this
opportunity to complete the following UHF radio frequency enhancements: updating
frequencies from surrounding agencies, and utilizing the group or band feature of the
Kenwood mobile radios and grouping similar frequencies making them easier to find
and easier to scan.

The full UHF program includes 47 channels, including all 10 paramedic frequencies. Only
the Kenwood mobile radios will accommodate all the frequencies. Apparatus with Motorola
mobile radios will only get the first 26 channels of the plan.

CHANNEL LOCATION DIFFERENCES BETWEEN THE
CURRENT AND NEW VHF RADIO PLANS

CURRENT VHF RADIO PLAN - NEW VHF RADIO PLAN

Channel 1 LAC TAC 1 (Now TAC 17) - State White 1 154.280

Channel 2 LAC TAC 2 (Now TAC 18) - State TAC 2 154.265

Channel 3 LAC TAC 3 (Now TAC 19) - State TAC 3 (Old TAC 7) 154.295

Channel 4 LAC TAC 4 (Now TAC 20) - Ontario Dispatch 153.830

Channel 5 State White 1- Ontario TAC 154.280

Channel 6 State TAC 2- White 6 154.265

Channel 7 State TAC 3 (Old TAC 7) - White 7 154.295

Channel 8 LAC TAC 8 (Now TAC 24) - White 8 154.160?

Channel 9 HEAR - White 9 154.160 or 154.220

Channel 10 Arcadia Dispatch - Verdugo Green 1

Channel 11 Arcadia TAC - Verdugo Green 2

Channel 12 Monrovia TAC - Verdugo Green 3

Channel 13 Alhambra Dispatch - Verdugo Green 4

Channel 14 El Monte Dispatch - Verdugo Green 5

Channel 15 Covina Dispatch - Verdugo Green 6

Channel 16 West Covina TAC - Downey Tac

Channel 17 Covina TAC - LAC TAC 17 (Old TAC 1) 154.430?

Channel 18 Downey Dispatch - LAC TAC 18 (Old TAC 2) 154.340?

Channel 19 Downey TAC - LAC TAC 19 (Old TAC 3) 154.400?

Channel 20 Long Beach 1 - LAC TAC 20 (Old TAC 4) 153.830

Channel 21 Long Beach 2 - LAC TAC 21 (Old Covina)

Channel 22 Long Beach 3 - LAC TAC 22 (Old Covina)

Channel 23 Inglewood Dispatch - LAC TAC 23 (New)

Channel 24 San Marino Dispatch - LAC TAC 24 (Old TAC 8)

Channel 25 Vernon Dispatch - South Bay Dispatch

Channel 26 South Bay Dispatch - South Bay TAC

Channel 27 South Bay TAC - West Covina Dispatch

Channel 28 Ontario Dispatch - West Covina TAC

Channel 29 Ontario TAC - Long Beach 1

Channel 30 Angeles NF Dispatch - Long Beach 2

Channel 31 USFS TAC-1 - Long Beach 3

Channel 32 USFS TAC-2 - Long Beach 4

Tac 17 154.280
Tac 18 154.265
Tac 19 154.295
Tac 20 153.830

334. What is a Pro-61 and a Pro-64 worth?

Hello,

I have a chance to buy a Pro-61 and/or a Pro-64. I was wondering what they are worth. They are just the basic scanner w/ the antenna w/o a power adaptor.

Thanks,

M. Prindle
When you reply the correct e-mail address will be provided

Your village called, they want their idiot back.

Hi, hope this info. is useful to someone. I'm including it on
rec.radio.shortwave because there are at least several receivers that
include this band, or have an option to install a converter.

All frequencies are FM and in MHZ.

126.5 -- Seattle Center 120.6 -- Boeing Tower
120.3 -- Seattle Center 124.7 -- Renton Tower
123.9 -- Seattle Approach 119.2 -- Seattle Approach
120.4 -- Seattle Departure 119.9 -- Seattle Tower
118.3 -- Boeing Tower 127.75 -- Boeing Field ATIS
120.1 -- Seattle Approach 133.65 -- Seattle Approach
132.6 -- Seattle Center 123.9 -- Seattle Approach
126.6 -- Seattle Center 128.3 -- Seattle Center

Enjoy,

Tim

I'll be darned, my mistake (and a dumb one, at that)!

Anyway, it's noteable that nobody here ever receives a single "thanks"
for a post with frequencies, only criticism, correction or sarcasm. I
have never ONCE in the entire time I've been following this group seen
a note of appreciation for posts like that.

In general, this is one ugly group of people here in R.R.S. A lot of
people here who are very ugly down inside. There is the occasional
exception.

Actually!! -- there is no shared freqencies with the military -- there are shared freqs with the government, but the reality of the situation is this: The US military can transmit on any frequency they want, any power, any time they please. The FCC has no jurisdiction or governing powers over them (remember the military has all the guns -- - joke!) The US government and the US military are two different things when it comes to RF spectrum.

This is the legal aspect of the situation. I was once (3 years ago) tracking down interference to a repeater and thought it was a local air base (it was) and called the FCC, I knew what the answer was, and they confirmed, "we have no jurisdiction or control over the military -- they have free reign to transmit where, when, what, and how much they want at any time and we keep no record, database, or notice of what they do". That is why all military radios have (for HF) capability for 500KC - 30MHZ or 100-500MHz , etc. they can designate any 'channel' for any exercise or mission.

how else would you want it?

don't matter -- that is the way it is.

by the way, I kept digging and found that the military has a 'shadow' FCC -- a group that coordiates frequency assignments for the military -- they are at Patrick AFB, FL. Very nice group of folks, and they keep track of all military freqs in use. The FCC does not and refers you to them.

cheers :)

p.s. I liked the 'harm' joke

Shucks, back when I was working 70cm for Uncle Sam, we never had any problem with hams politely shifting to another frequency when we tuned up in the shared band. Of course, the fact that we were running 3Mw with a 15,000' antenna height may have had something to do with it.

348. eBay and cellular-capable scanners: Why don't you people get it? (was: Re: FS PRO-2004)

>Unit was pulled by ebay due to scanners being "questionable" for sale there.

Was that you who put "MODS DONE" in the item line? No wonder it was pulled.

When will you people understand? If you want to sell your scanner on eBay, it's not a problem...UNLESS you MAKE it a problem by putting stuff like "receives cellular telephones", "full 800Mhz coverage", "all mods done", "receives frequencies eBay won't allow me to tell you about", etc., in the subject line.

The buyers who are willing to pay top dollar for these scanners ALREADY KNOW that they're modifiable for cellular coverage. That's WHY they're willing to pay top dollar in order to win the auctions! Don't make ANY mention of cellular or modifications and it won't be an issue.

You want HOW much for these scanners?

(rolling on the floor, laughing hysterically)

Even at eBay's inflated prices, nice PRO-90s typically go for around $100 USD.
Even figuring in the exchange rate, that's what...about $130 CDN? 890s
typically sell for $130-150. That's roughly $170-195 CDN.

Some of these carriers are "self-insured". I had a problem with Viking Freight once that taught me about "self insured". I delivered a big HF Amplifier back to Henry Radio in Los Angeles for repair. They repaired it, and although I wanted to drive down from Northern California to pick it up, they insisted on shipping it back to me via Viking Freight.

When the amplifier was delivered, it was discovered that it had been severely dropped - so hard that the internal low-voltage power supply actually stripped out the panel by the screws that hold the supply. The new tube was destroyed, the supply was damaged, and Viking Freight absolutely refused to even discuss it. I contacted a lawyer who sent them a letter, and Viking Freight immediately called to ask if I would "Settle for $500". Unfortunately, the repairs far exceeded $500, so I refused. I drove (again) the amplifier back to Los Angeles and delivered to Henry Radio to be re-repaired. Henry Radio seems to have lost the amplifier, and doesn't return phone calls about it. The best I ever got out of it is from Mrs. Henry who always said "I feel just terrible about this!" I had witnesses to the opening up of the amplifier box and to the delivery back for re-repair. I do have pictures of the unit with all the damage which we took before driving back to Los Angeles to have it repaired again. We're putting together a web site so all can see what happens sometimes when you deal with "companies" like these.

Lesson learned from all of this: Hand deliver and pickup if it's a really important item to you! Sure would like to have that amp back!

I have two different lists describing the California Highway Patrol's handheld radio channel configuration. For channels 5-7, they disagree.

Could anyone who has recently used or otherwise has recent knowledge of these radios please inform me of the correct channel configuration?

Here are the two lists I'm looking at (and again, only 5-7 don't match).

List #1 sez:

```
Frquency Chan Designation Usage
======== ==== ================== ====================
154.9050 F-01 Vehicular Repeater Car to Station
154.9050 F-02 Vehicular Repeater Car to Car
154.9050 F-03 Vehicular Repeater Direct
154.9200 F-04 CLEMARS Mutual Aid
156.0750 F-05 CALCORD On-Scene Coordination
155.4750 F-06 NALEMARS Mutual Aid
154.9350 F-07 Motorcycle Repeater Car to Station
- F-08 Regional Varies
- F-09 Regional Varies
- F-10 Regional Varies
- F-11 Regional Varies
- F-12 Regional Varies
```

List #2 sez:

```
Frquency Chan Designation Usage
======== ==== ================== ====================
[...]
154.9350 F-05 CLEMARS Gold 2 Mutual Aid
155.4750 F-06 CALCORD On-Scene Coordination
155.4750 F-07 NALEMARS Mutual Aid
[...]
```

Many, many thanks.

Back in the days of the Emergency Broadcast System, I believe the audio
of EBS alerts was broadcast to TV/radio stations via a 39 MHz frequency.

Now that EAS is in place, does anybody know which 2 (or more) frequencies
are used to deliver these messages in the Los Angeles basin?

Source record: 85256

One thing you did not mention is that it slows the scanner down, the bearcat890xlt/radioshack pro-2036 ran about a 1/4 of the speed with CTCSS enabled than without it. Put a weather freq in the first channel and another in the last channel, enable the CTCSS but do not program one for these channels but make sure there are some with it, unlock all channels in between and time how long it takes to scan form the first to the last, then turn off the CTCSS and do it again, on the 2036 it was very quick without the CTCSS and took at least 4 times longer with it.

Cheers

Len

If a shipper accepts a package, then I think it should be deemed as adequately packaged. Don't take any guff, its the loud customer that gets, the insurance.

On anything expensive I use Fedex. I have had a perfect record from them, shipping laptops as well as ham gear.

UPS delivered my new FT-100 to a house 6 blocks from me! With no signature! Just left it and its rainy season!

372. Re: Pro-92

Newsgroup: rec.radio.scanner
Date: 2000-07-09 00:00:00 UTC
From: David Fuller <drfuller@hotmail.com>
Message-ID: <39694EF2.EE7A3948@hotmail.com>
Source record: 85259
Cross-posted to: alt.radio.scanner,rec.radio.scanner
Body handling: Binary attachment payload not displayed: drfuller.vcf

The Pro-92 channels is setup are follows:
Bank 0 - 0-49 Bank 1 -100-149 Bank 2 - 200-249 Bank 3 - 300-399 Bank 4 - 400-499 Bank 5 - 500-599 Bank 6 - 600-699 Bank 7 - 700-699 Bank 8 - 00-699 Bank 9 - 900-999 and is displayed as Bank 0 - Ch. 0.

I think in order to use the "digital weather" feature. You must have it out of scan mode and in weather mode to activate it. It has priority channel on each bank. You can de-activate the priority feature when trunking. As far I know I do not think that the Pro - 92 can be modified for cellular reception.

Hope this helps.

Body handling: Binary attachment payload not displayed: drfuller.vcf

On 800 Mhz systems. The users use a pool of frequencies. May be as little 5 or more frequencies. The users are arranged in talk groups such as PD dispatch, etc.
When a user keys his mike on his radio it transmits on one frequencies. Then when he transmits again he's on another. This allows more talk groups use the frequencies

Trunk tracking scanners allows you follow a talkgroup.

Hope this helps.

Hello,

I have a Pro-2006 that is hooked up to the old HB232 scanner interface.

I bought a new computer and now I can't get it to work.

I have it setup on com1 as it was on my old computer. It seems to notice that the scanner is there since when I start the program and it prompts me to turn on the scanner it immediately goes to checking com ports when I turn on the radio.

Anybody out there know anything about setting this thing up? I've been through the docs front to back and can't find a thing that will help me out with this problem.

Is Bill Cheek still around?

Anyone know if he can be reached?

Any help is much appreciated, thanks.

A couple questions about the Pro-92....

Is the "digital weather" feature always on, during scan, or do you have to
be out of scan mode and only on weather mode for this to activate??????

Are the 500 channels split into banks at all? NO 1-20,21-40 above the keys,
so couldn't really tell...

This has a priority channel, I take it?

Can this be modified for cellular receive? (SORRY I HAD TO THROW THAT IN)

Thanks for any info!!--

I may be wrong about this but I recently shipped a Drake R8 to RL Drake.
I didn't have the original packing so I packed it much better than it comes
from the factory. When I received the R8 back it was in a Drake box with
original packing material. On the invoice it said it said they charged me
for a new box and packing for insurance purposes. Mind you, the original
packing wasn't nearly as well packed as I did myself. Can anyone say
whether insurance will refuse to pay if not shipped in original packing?

My experience with UPS is they will reject paying for just about any reason they
can make up.

388. INVITATION TO 3 ANTENNA REFLECTORS (LISTS)

Newsgroup: rec.radio.scanner
Date: 2000-07-09 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20000709092024.02311.00000258@ng-cb1.aol.com>
Source record: 85309

QST--

You are invited to join one or all of the following lists on e-groups(formerly onelist). All these reflectors are e-mail based, friendly, objective, and moderated ,so that no spam, porn, off-topic, or personal-offensive posts are sent out. You will receive no off-list e-mails by subscribing: again; no spam.

These lists (with average recent subscriber sizes) are:

ANTENNAS@EGROUPS.COM 180 members
CROSSFIELDANTENNA@EGROUPS.COM 67 members
FRACTALANTENNA@EGROUPS.COM 265 members

Please review the descriptions at:

http://www.egroups.com

Please note the CFA list specifically deals with this antenna in an objectively critical fashion and no posts will be allowed that make grandiose claims without supporting data presented. To date, no data has been presented which requires the extraordinary claims made by some pundits: there is no evidence for better performance than any other small vertical antenna (and that performance is poor).

To subscribe to any list, either go through the process at egroups, or to skip the process (and some say 'annoying questions') just do:

---------- -subscribe@egroups.com

where the ---------- is the name of a given list (such as 'fractalantenna')

If you have a specific question on this post, please e-mail me off-NG at chipn1ir@aol.com.

73,
Chip N1IR

Bill,

I RECEIVED a radio from a fellow via UPS. It arrived in good condition. Don't recall if it was insured or not. Anyway, the driver and I were talking and he mentioned that he doubted they'd pay a claim on it anyway, if it was a radio, as the box was "way too flimsy"! Actually, the box FELT a bit flimsy on the outside, but there was plenty of bubble wrap on the inside.

I found it "interesting", to say the least, that he would make such a comment based on that one factor. I'd think it would be on the "total packaging" that they would base any claims!

Al

The local UPS here in Madison Heights, Michigan, has a BIG sign posted, that originally said all electronic equipment should be packed in it's original packing material, and carton. They crossed off the word "should", and wrote in "MUST", and they enforce it very aggressively!

So in those situations where I don't have an original carton, I take great care to pack it well with bubble wrap, and popcorn, and send it via US Postal Service, where I have NEVER had a problem of any kind.

396. Cleveland Botanical Garden

Newsgroup: rec.radio.scanner
Date: 2000-07-09 00:00:00 UTC
From: Mike Mayer <mayermh@ix.netcom.com>
Message-ID: <8ka7h8eog1@nntp9.atl.mindspring.net>
Source record: 85317

Looking for the portable radio's frequency for the Cleveland Botanical Garden(s), in University Circle. It would include the adjacent Hershey Children's Garden. Likely in either the 151 or 450 MHz ranges.

Could not find in Percon or the FCC databases, nor in Police Call Plus or Monitor America or Frequency Almanac, or any of the other several Ohio scanning frequency sites.

Possible their radios are leased, thus under the Licensee name of the leasing company?

They're not FRS, possibly GMRS. Likely though, a standard business/organization frequency.

Thanks,

Mike

399. Is there something better than BC-245XLT?

Newsgroup: rec.radio.scanner

I want to get the BC-245XLT. Is there anything any better
portables out there than this one?
Is there a newer version coming out that enables the user
to enter text like that one TT model Radio Shack has?
Is the Radio Shack portable any good?

UPS has a thing about packing. If it is insured for more than $100, they want to inspect it. If it is not packed in foam, they will not allow you to ship but will instead charge you to foam it into one of their boxes.

As for the Ebay's knowledge of what is legal and not legal in the radio field is laughable. They have no true knowledge unless some dim wit spells it out for them. I have seen linear amplifiers up for auction for "11" meters which is totally illegal, also "2" meter handheld that were expanded both in Tx & Rx which is illegal to be sold to the general public and are not type accepted by the FCC. They were sold through Ebay with no problem at auction.

It's the wording that counts..... I sold an AOR 2002 scanner that was cellular capable via the factory with no problem.

You need to post the prices Scott. Why should we begin an email program
to find out you may want too much.

List the features of each radio also. Good salesmanship is the in the
description of the product.

Ed, I didn't read where you were enjoyed your job, or that you had a good feeling of satisfaction when you helped someone when they were injured or saved a home from devastation via fire.

I am retired after 35 years of public service - law enforcement - fire chief/fire fighter - ambulance commander - ema coordinator. I enjoyed every bit of it when I was involved in saving a human life or putting out out a fire and saved a home. It's a great feeling. I worked both paid and volunteer situations.

This post is NO means a flame.

Ship via USPS any way you want. The price for shipping is also reasonable and arrives sooner than UPS. I do quite a bit of shipping and that has been my experience.

A couple questions about the Pro-92....

Is the "digital weather" feature always on, during scan, or do you have to
be out of scan mode and only on weather mode for this to activate??????

Are the 500 channels split into banks at all? I didn't see any 1-20,21-40
above the keys,
so couldn't really tell...

This has a priority channel, I take it?
I hear it can detect/display pL tones, but can it "use" them when
monitoring???

Can this be modified for cellular receive? (SORRY I HAD TO THROW THAT IN)

Thanks for any info!!--

See: http://nicdlady.com/index.htm and more specifically,
http://nicdlady.com/radio_pr-uz.htm , for battery packs for Uniden radios.

For the BC2500, they're $24 for your pack rebuilt, $19 to buy the cell
insert, or $33 to rebuild it with NiMH cells for 1 AH instead of the
original 600 mAH.

Don't sell 'new' packs though, have to send yours in.

I would assume that if the ups man says they won't pay on this or that for one reason or another it's prolly gospel; for I'll bet he's heard the ire of customers who had a claim denied, or overheard superiors discussing how much income they generate from insuring a package. Yes you would think that ups would be objective, but they are in business to get filthy rich and pay dividends to stock holders , not provide a fair and useful service. (Which it appears is just a sideline) All said I have NEVER had a bad broken or late delivery from ups; though I'm just a trifle more enamored of FED-X. NO odubt they too have their quirks, but if I could go after my package cross country myself I would. BUt can't; therefore, as my Uncle observes. "You pays your fees, and takes your chances"

I bought this scanner new and its been in the box ever since. Its only been taken out about 4 times to look at. I never use it because I have an AOR 1000XLT handheld and thats good enough for me if I can ever get to using it. It is trully mint in every way.

Scanner comes with original box, manual and screw-in antenna. Your for $300.

419. In praise of CTCSS

Newsgroup: rec.radio.scanner
Date: 2000-07-09 00:00:00 UTC
From: Richard Cochran <rcochran@netcom12.netcom.com>
Message-ID: <8kav8r$5rd$1@slb2.atl.mindspring.net>
Source record: 85340

I've been playing with my new Icom R2 for the past month or so, and I thought I'd pass along a little tip I discovered.

If your radio offers CTCSS (subaudible tone squelch), read the manual and learn to use it!

Almost all the fire and police frequencies in this area (Northern California) carry a subaudible tone, usually 82.5 or 131.8 Hz. The radio can detect this tone and open up the squelch only when it hears the proper tone.

For police and fire, everybody on a given frequency is using the same tone. So why bother setting your scanner to recognize the CTCSS tone? Because doing so eliminates virtually all interference from intermod, nearby strong pager towers, operating too close to computer equipment that isn't shielded too well, etc. It keeps the radio silent except when a "real" transmission happens, and it keeps the squelch tail short. It lets you set your squelch to a very low setting without being bothered by bursts of static.

This wasn't so important with my nice old big triple-conversion base station scanner. But my dual-conversion portable suffered from intermod until I figured out how to use CTCSS to keep it quiet.

The insurance is actually a contract, and what the UPS man says, is
what UPS would like you to believe. The reality is UPS does very badly
in small claims court on these matters. For them it is simply a
revenue decision. Has little to do with right, wrong or fault. They
hope you accept their decision on the assumption that if they say no,
you are not likely to go further. The vast majority do walk away, and
UPS banks on that.

I have a friend in Ohio who finally go so mad he did take them small
claims court. UPS lost, but wouldn't pay. Once again, a revenue
decision. So the next step was to pay the fees for a sheriff's sale to
satisfy the judgement. One morning a Deputy from the Cuyahoga County
Sheriff walked into the UPS offices, and proceeded to seize the cash
registers in prepartion for the auction. Needless to say, having
nothing to calculate the charges or collect money with, this
effectively shut down the UPS office. UPS made a revenue decision in
about an hour, and decided to settle all of the outstanding insurance
claims with this gentlemen. He still refuses to ship UPS.

I think it is unfortunate that these decisions are now revenue based, rather than any semblance of right/wrong or responsibility for the damage.

I enjoy using my scanner (AOR 8000 from Javiation) and enjoy reading posts here from time to time. A couple days ago I "stopped by" and noticed the NUMEROUS "FS" posts. I have a Radio Shack PRO-43 which I do not use. As I was unable to find a listed moderator or charter for the group (not easy with AOL anyway), I posted a link to my scanner. Rather than get a polite e-mail from someone here, I was "turned in" to the "AOL Police" for newsgroup violations and warned accordingly by AOL. Indeed, I now have a "black mark" on my files at AOL - the first since I started using them when they were DOS-based. I apologize for upsetting whoever I apparently did here, and understand the need to keep certain newsgroups spam free. I would have greatly appreciated and honored a single e-mail instead. Happy scanning!

Sincerely,

Chris Marshall

Chris:

That's odd...people advertise items for sale, and for auction, all the time in this newsgroup! Myself included (you may have noticed). While some do get aggravated about Ebay auctions, vs. for sale items, I wouldn't think it would upset them that much. Actually, that's one of the main reasons I read this newsgroup, to look for deal on items I might want. Buying, selling, and trading radio equipment goes with the territory for most scanner enthusiasts.

You can always use rec.radio.swap

I doubt if AOL will take any serious action regarding this...what you saw will probably be the end of it.

Take care,
Bill Crocker

Message-ID: <8nQ95.16606$B%6.78513@typhoon.tampabay.rr.com>
Source record: 85388

I offer this service through my website. You need to purchase the replacement keypad through Radio Shack or by calling their parts dept. directly at 1-800-843-7422. The cost of the part is ~$10.00 and takes 1-2 weeks to arrive. The part to ask for is P/N 10789808 "KEYTOP". Include the replacement part when sending your radio. If YOU order it, you don't pay a middle man! ;-)

I replace these for a $10 labor fee + $8.00 return shipping/insurance (via USPS Priority Mail). Turnaround time for such a repair is 2-3 days.

My disclaimer: I guarantee all work, I do not do any illegal mods, I do not undo other people's mods unless specifically instructed to do by the owner.

You can contact me directly at spectrum@cfl.rr.com or visit my website for information on other repairs/mods:
http://home.cfl.rr.com/scan/Services.html

Have fun,

Robert

Actually, although you are correct about the FCC having no authority
over the Army, you were incorrect about them being able to come up on
ANY channel they choose for any exercise or mission.

The NTIA closely regulates the Government, much like the FCC does in
the non-federal government world. If the NTIA says they can use
a frequency, but it HAS to go through the NTIA before it is legal,
and the NTIA stays in certain bands.

Chris,

This is why more and more folks are going to Ebay to sell their radio equipment.

Put your 43 on Ebay and get a nice price for it.

It seems to me that if there are five frequencies (not including the control channel), then only 5 indivuals can transmit at the exact same time (one on each frequency). If one were to use six conventional frequencies (freeing up that control channel) then 6 individuals can transmit at the same time (different CTCSS tones could be used for sharing a particular frequency). So how is it that trunked radio allows *more* talk groups?

Exactly. That's how the phone company can provide fewer lines to an area than there are phone numbers. The circuits are dynamically assigned to a pair of cooper wires. The same happens with a trunked system. The system controller automatically assigns the talkgroup a pair of repeater frequencies. In times of peak use the radio user might get a busy tone. This is the same as getting an all circuits are busy when calling into an area with too much traffic or not getting a dial tone when your area is too busy.

The number needed depends upon how much traffic the system needs to handle. The more traffic on the system, the more frequencies that will be needed by the system.

If this is the case, why don't you just save the time of everyone involved by
making your "asking price" the price you REALLY want?

This is a big reason why eBay is so successful. The market determines the
price and there are no games to play.

> sharing a particular frequency). So how is it that trunked radio allows
> *more* talk groups?

You are correct that a system can only handle as many *simultaneous*
transmissions as it has frequencies available. But the advantage of
trunked radio systems is in the number of 'channels' available. On a
conventional radio setup, if you want five distinct channels then you
need five frequencies. But they're not all talking at the same time all
the time. There is a lot of dead air. What if you temporarily borrowed
that dead air and let someone else use it?

The first step towards this was CTCSS (aka PL tones), where different
users could share a frequency and only those on the same 'channel' would
hear it, though really they are all using the same frequency. The ratio
of channels to frequencies goes from 1:1 down to about 2:1 or 3:1.
Trunking radio is a step beyond this -- you can not only share one
frequency, you can share several. This is even better than CTCSS because
with tones, you're stuck on one frequency. If it's in use by another
'channel', you have to wait for them to finish. With trunking, your
radio hops to an empty frequency and uses that instead. If everyone who
has a channel wants to use it at the same time, then yes, you are
limited to the number of frequencies available. There is a mathematical
model for determining how many frequencies you will need available to a
system to handle X number of channels (aka subfleets/talkgroups) based
on expected airtime for each channel. There will be times when all
frequencies are busy and a user will have to wait to get on the air, but
this is not catastrophic if indeed he only waits half a second for
another transmission to end so he can get in. As wait times get higher,
another frequency can be added to alleviate the load.

There's a big commercial system in my city with literally hundreds of
talkgroups on it and it uses 20 frequencies. To achieve the same results
without trunking would have required hundreds of conventional
frequencies. The financial savings in not having to license all those
separate frequencies is considerable, as are the practical savings in
freeing up band allocations.

I hope that makes some sense. There are, of course, many other
advantages to trunking systems.

UPS has for several years left expensive items outside with out even ringing the door bell in some cases. The driver seems to be in such a hurry. We have gone for several days before we noticed some items at the door since we use the garage more often than not.

There used to be a store near here called Peachtree Salvage that had literally tons of items shipped by UPS that never made it to the destination. It had several branches. One could literally buy electronics for a fraction of their value until they got someone who had an idea of their real worth. I bought many a bargain from them. The point is that UPS lost so much that a chain of stores made a good business of selling stuff that never made it to the consignee.

Get the ICF-SC1PC, but only if you are interested in scanning the military air band. Otherwise, wait for the Pro-92 replacement due in September. The Sony is difficult to program by hand. You need the PC interface.

I was wondering how the Bearcat 9000 scanner that I own does performance wise against most other scanners that only pick up VHF hi and low, UHF, and AIR???
IS the 9000 supposed to be a very good overall scanner with fairly good sensitivty for the most part all the way across the frequencies it covers???
It seems the FM band is very insensitive and picks up alot of overload from the local tower!!!! Are the TV bands insensitive too and military aircraft bands insensitive???
I also seem to pull in some internal noise at certain intervals on the radio. I did not pull in those noises on my old Cobra 16 channel scanner that covered VHF lo, hi and UHF.

thanks

Rene,
To explain the problem, in the USA, to modify a scanner has been made
illegal
by the Government, E-Bay only reacts when a seller tries to list his
radio as "modified" and E-Bay pulls the listing as not be caught in any
"problems" Anyway, by mentioning it, the seller alerts E-Bay who
doesn't want to have any problems? Sorry, but that's the status of
things in the USA right now.
All the best, Martin

martin, i suggest looking at the reviews of both rigs at the strongsignals.net site. then you can make a better choice. the r2 is small but i found it difficult to use. the sony is a bit of a clunker in size but a nice radio functionally. also a bit hard to use. get a ham license and buy a yeasu vx5. then you can talk or scan stuff. personally i dont like to spend a lot for something you cant talk on. the yaesu gets aircraft just fine and its small. i take it to all the airshows.

I know of an amplifier that was shipped ups (united parcel
smashers). It was mounted on a 2x4 wood frame that was
crated in another box, ups managed to tear the rf deck off
the front panel of the amp, break the 2x4's (as in 2 x 4
inch studs). They are refusing to pay the insurance claim
since the amp wasn't properly packaged!

The 9000 is a great scanner and has the best RF section of any Uniden scanner in recent memory. You may have a local tower that is causing all your problems. Make use of the ATT key or try different antennas.

Legal? Probably not.

Possible? Also probably not. While not all use it, all the police Mobile
Data Terminal protocols I've heard of include the option for encryption, and
police as a matter of policy tend to buy that option, yaknow?

Still, there are MDT decoder programs around for non-encrypted versions. So
there's a chance.

461. Help finding Louisville Frequencies

465. Can a Pro 2015 be modified?

Newsgroup: rec.radio.scanner
Date: 2000-07-10 00:00:00 UTC
From: Mistervoice@Mistervoice.com
Message-ID: <39693d38.35893872@news.pacbell.net>
Source record: 85267

Hello,

I just recently picked up a Pro 2015 from a local Radio Shack at a killer price ($59 .99 - Clearance).

It's a great little base unit, but it can't access freqs between 54 Mhz and 108 MHz, and between 174 MHz and 380 MHz. Can it be modified in any way to receive these ranges?

Dave

Any of the MCT software sold now a days includes as a part of the
basic package DES encryption. It is not an option, rather a
requirement.

Interesting. On my Icom, I don't notice that at all. The CTCSS is enabled/disabled only on a per-channel basis. (Your suggestion to "enable the CTCSS but do not program one for these channels" makes no sense on the Icom R2). There may be a slight slowdown when a frequency has an RF carrier without a tone or with the wrong tone, but there is no slowdown whatsoever when a frequency doesn't have a carrier. On the other hand, without CTCSS, when a frequency has a carrier without a tone, it stops scanning entirely to listen to the channel until the carrier goes away; while with CTCSS, it only pauses long enough to determine that the right tone isn't there. In other words, CTCSS either has no effect on scan speed (when no carrier is present that would normally break squelch), or it speeds up scanning tremendously (when enough signal or noise is present to break squelch, but it's a "false" signal, lacking the proper tone).

But certainly, if CTCSS slows down YOUR particular scanner, that might be a reason to avoid using it on that scanner.

Service *does* vary from area to area, and even within a particular
area over time.

Lately I've had few troubles with UPS. The major problems I've had
occurred when a new delivery guy came on after the old driver retired
after approximately 25 years on the job. As some people in this
newsgroup are probably aware, I got extremely ticked off and decided
to do something about it, come hell or high water.

Right now I have an "in" with UPS. I wrote a complaint letter to UPS
headquarters in Atlanta, ATTN: Management. Headquarters in Atlanta
contacted my local UPS hub, and pretty soon I had UPS people calling
me on the phone and falling all over themselves to please me.
Apparently the letter I wrote had a real impact, which came as a
surprise.

There are two people I know that I can call at my local UPS hub if I'm
having a delivery problem, and they will go directly to the truck to
see if my delivery is on it or not (or go out of their way in other
areas to assist). Most people couldn't get past 1-800-PICK-UPS with a
rocket launcher. And this was a result of a polite but firm letter to
UPS management in Atlanta.

Maybe if more people simply asserted themselves appropriately rather
than quietly fuming or just allowing themselves to be the victim of
poor service, the organization would change for the better. They
would be forced to. But too many just sit around and let things pass
with the attitude that there's nothing that can be done.

Tim

I can get the Sony model for 89 dollars and the ICOM for 220 dollars including a battery charger, Ni-cad rechargeable batteries, and an SMA to BNC aerial adapter.

I've never owned a scanner before, all I want to do is listen to local airport frequencies.

Also, are there any websites that allow you to search for world-wide aviation freqs?

Thanks,

Martin Kaareng

If it is a CAT interface, it's still available from Yaesu.
If you want to build your own, there's an article in QST
some time back (within the past year or so, I think) about
building one for the FT-1000D. But it's the same interface.

I'm pretty sure the one from Yaesu actually uses optoisolators
to protect the radio and PC from each other, which probably
contributes to its price...

However, that's not true of the ICOM CT-17 CI-V driver. It's
just a MAX-232 driver chip and a couple of support components.
And waaaay overpriced!

Eric

Receiving the 2400 range is not all that hard.
At one end of the "lets trade skill for money"
scale comes the old MDS converters. These devices
took 2.4GHz "TV" and downconverted it to TV CH2
(or other channels). There are a lot of these units
still around, even some of the commercial jobbers with
there funny little "dish" reflectors.
At the other end or the money-Vs-skill scale are
any number of specialised military units.
I can recieve from 1KHz [Whistlers and other neat ELF]
to above 15GHz with no brakes, and then from 20 to 30GHz.
But there is not much above 1GHz worth listening to.

Radio Shack Pro 2051 (1000 channel) (Base unit)
Radio Shack Pro 94 (Includes A/C adapter) (1000 channel)
Sony SC-1 (non PC version) (300 channel)

All in perfect, mint condition. All include original box
and manual. The Sony has never been used at all. The
Radio Shack units have seen very little use.

This is a package deal....reduced to $375 for the whole
enchilada, shipping and insurance included.
No COD, no Paypal, sorry. My e-mail addy is my Ebay
ID if you with to check my creditability.
Payment by Postal money order ONLY.
Respond by e-mail, please.

I recommend getting a real ISP. Most real ISPs don't sit around watching
their member's every move and censoring them.
Heck, if you are cheap, use a free ISP like bluelight.

The old dos program that came with the HB-232 develops more and more compatibility problems with each passing year. It runs on my older laptop but not the newer desktop. Your best option is to install Pro-Turbo and bypass all the problems of the old dos program.

UPS actually has a policy. At the driver's discretion, packages with
values up to $500 can be left. When you see the notation on the
package (adult signature required). It has nothing to do with
Pornography, it means the package was valued at more $500 IIRC, and it
is no longer driver discretion. You cross the risk/benefit threshold.

It's hard to imagine there's a lot of interest, but I've posted a list - by route - of the Amtrak Thruway bus operating companies at my page http://www.snowcrest.net/marnells/thruway.htm OTOH, at the bottom of the page are some links that my take you to even more fascinating stuff.

And radio fans, anybody care to look up radio frequencies for these outfits? I know some of them have company radios.

You have confirmed what I have suspected for a long time now, regarding UPS. They are just plain lazy BASTARDS! What if the item is one of a kind and worth $495.00? I'm supposed to just eat the cost, seeing as how their claims department SUCKS! You might be able to tell I have had some BAD dealings with UPS. USPS isn't much better for packages......

Mackey wrote:

> The good book says

Mackey, I suggest you truly try to find Christ at some point soon. Your behavior here has been the most unChristian behavior I have ever seen. I admit mine has too. I ask God for His forgiveness for my even bothering to get involved in this childish flame war with you.

Ultimately, you, Mr. Mackey, will answer to God, too. Is this how you want to stand before Him on your Judgement Day - having invoked His name to point fingers at Bill Cheek?

No more will I make a deliberate effort to "get your goat" as it were. You've crossed a very serious line, bringing God into this petty dispute you have with Cheek.

May God forgive me for being so childish, and participating in your dispute.
May God have mercy on your soul, John Mackey.

Years ago, while located in San Jose, California, I ordered a B&W antenna from them and requested it be shipped to the SoBay UPS receiving facility with a notification to my PO Box. I put down my home phone number and some fool reverse-checked the number and had the antenna dropped off at my unoccupied house which was at the junction of two crossing bus lines.

Two weeks later I called B&W and got the UPS tracking number and found it had been left at my house. I filed for replacement of the antenna and got some idiot's song and dance about not notifying when it was cheaper for them to deliver.

I then quoted from their own manual and told them either I had the antenna I ordered replaced within three days, or I'd take them to small claims court and teach them to read their own manual for the paltry sum of 1,500.00.

Wouldn't you know it, they wouldn't let me teach them to read. I had my replacement antenna TWO days later!

You usually have to call the regional center and talk to someone who at least has a basic familiarity with American language. Find out what you need and don't let any local gigolo bamboozle you.

The technical term is "Gull Sweeper" and indeed they are there to
prevent birds from roosting (and pooping) on the billboards. Very
common in costal areas.

I strongly *suspect* the reason UPS doesn't wait anymore (though skipping the doorbell is sloppy) is that it actually costs them less even considering theft/damage from letting it sit without waiting for you to answer the door.

As an example if Joe UPS driver waits for someone to answer the door at all his residential stops he wastes say an hour a day just waiting. Say he's making a total of $35.00 an hour in wages and benefits, that's $35.00 wasted per driver per day waiting.

If he just drops off the item and doesn't wait he saves the $35.00 but because of theft/damage/etc it costs UPS $10.00 in claims per driver per day on average. Net result is that UPS *saves* $25.00 per day per driver by *not* waiting.

My figures are just for an example +/- but I suspect some sharp bean-counter figured that one out quite a while back ;-)

Thanks for the response I was at a total loss. I have come to the conclusion that the new computer is probably too fast for the old program since it kinda ran for a few seconds just once. I've gone through everything and it seems to be hooked up correctly.

Can you please tell me a bit more:

Will Pro-Turbo run my 2006 with the HB-232 setup?
Where can I get Pro-Turbo?

546. Crystals online?

Newsgroup: rec.radio.scanner
Date: 2000-07-11 00:00:00 UTC
From: Rich <lakers34@netscape.net>
Message-ID: <01bfeaa5$095f30c0$13b1b2d1@toast>
Source record: 85236

Anyone have a site they recommend for purchasing crystals? Is Ken's Electronics ok? I dug up an old Regency 10 ch. tabletop radio that seems to work fine but needs a few...my local FD is still VHF so any info would be helpful...

Also...I think the range on this thing is up to 470 only--I think it's an ACT-E-106 - so would that mean that a crystal with a freq of 470.500 wouldn't work? Sorry if it sounds dumb but I've never owned a unit this "archaic"...This thing's kinda cool though - reminds me of an old Crosley radio the family would sit around-the rolling red LEDs are like DISCO-hahaha

TIA
Rich

I am not sure if this is the proper newsgroup for this.. I am not really
sure
there is:
Looking for a old weather radio that I had when I was young. It had
2 big
push buttons. 1 for alert and another for weather. It had 2 knobs,
1 for fine tuning or tuning and the other for volume. It said on the
radio : WEATHER EYE.
Any info is appreciated. Also I believe this to be a Motorola????
Anyone got this for sale??????
Chris

Source record: 85242

Hello,

I will be travelling next week from the Philadelphia area down route 13 to 164 to the Outer Banks of NC. I will pass through Delaware, Virginia, and possibly Maryland. I would appreciate any frequencies which I might monitor along my route to stay on top of traffic conditions (probably police). I have found the VA state police frequencies on the web but have not had much luck with the others. In addition, if anybody has any interesting air, marine or police frequencies that I might tune into when I was at the Outer Banks that would be appreciated as well.

Thanks in advance for any help,

--
Bob Mergner

I have shipped many large, heavy things through UPS and for the majority,
UPS has destroyed everything large or heavy I have shipped.
I have seen them literally take a 180lb case with computer equipment and roll it off the truck
onto the concrete below and break the case.
Also, when I was going to Devry electronic school, half of the students there worked for UPS
(that's an insult in itself as most Devry students are morons who real schools won't take).
They told me stories of destroying stuff like it is some sort of joke or it's funny.

I have lowered the price on my Radio Shack Pro-2039 200 channel 800 mhz scanner. THis is a cell blocked scanner, but is dual conversion and the cell calls can be easily heard on the "image" freqs. THis radio is in EXCELLANT CONDITION and has the manual and telescopic antenna. I have lowered the pric to $115 INCLUDING SHIPPING! I am selling this due to the fact that our county has gone to a trunked system. I also accept PayPal. Thanks for your time!
LARRY :-)

Several months ago UPS delivered a GAP challenger to my house, my wife was home at the time. She said that the driver rang the door bell but by the time she got to the door the driver was driving off in his truck and the antenna was laying on the porch. When I got home from work I found that the shipping box was damaged, upon opening the box I found that the two (2) lower sections (and the thickest) were bent. It was my impression that it took a great deal of force to bend these sections of the antenna, almost as if they used it to play tight rope walker.

On a second occasion several weeks later they left my brand new Kenwood TS-570SG on the front steps without ringing the door bell (I was home). There was no damage but the radio sat on the steps for several hours before I went outside and found it.

I complained to UPS about this and ever since then the driver does not ring the bell or leave the item, now they just leave the yellow ticket advising me I have a package.

I for one will NOT use UPS for any of my shipping if I can help it. I am going to be selling some ham gear in the near future and plan to use alternate services.

573. FS/trade: Bearcat BC-101 collectable

Newsgroup: rec.radio.scanner
Date: 2000-07-12 00:00:00 UTC
From: Don Bertone <dbertone@flash.net>
Message-ID: <396C7C49.8475E989@flash.net>
Source record: 85109
Body handling: Binary attachment payload not displayed: dbertone.vcf

This one is in real nice shape and has the original manual.

It was the FIRST user programmable scanner that used the scan buttons as dipswitches to program
using codes from the manual.

16 blinking lights are great to watch and you can lockout any channel using the switches.

It was the first scanner to do away with crystals.

Very collectable.

$150/bo or take a good regular scanner in trade or trade in as this one should be just sitting in a collectors
shelf.

Evereything works fine on it with no problems or burned out lights, loose switches or any other
problem.

[One or more binary attachments are retained only in the source text.]

I have an IC-R7000 communications receiver which is considered by many to be top of the line,the rig is in excellent condition and comes with the original manual.
IC-R7000 specifications:
Frequency range= 25-1000MHz,1025-2000MHz
Frequency control= CPU based digital PLL synthesizer.Direct frequency entry.
Memories =99 tunable memories store frequency and mode.
Scanning=full scan,programed scan,mode selected scan,selected scan,memory channel scan,auto write programed scan & priority scan.
Frequency readout=7 digit fluorescent.
Frequency resolution=SSB,FM/AM,owner selectable 100Hz,1KHz,5KHz,10KHz,12.5KHz,25KHz all modes all bands.
Frequency stability==+or- 5ppm @-10c to +60c
Power supply=117 or 240 VAC
Receiving system=25-1000 MHz FM-N/AM/SSB triple conversion,FM double conversion:1025-2000 MHz,FM-N/AM/SSB quadruple conversion,FM-W triple conversion.

I will ship to the lower 48 for $700.00

Regards
Bob Stamper

John,

Here are a couple more NS police freqs for the Cleveland area:
160.560, 160.680 (car to car), 160.545.

Also of interest is 160.410. It is the railroad shuttle bus channel for
the train crews.

Let me know if there are any other rail freq's you might need.

Paul

A friend shipped a camera double boxed, with styrofoal peanuts, with the outside box being a wine crate. UPS crunched the box to the point where the camera was mangled.

First UPS denied he bought insurance.
He showed them it was included on the receipt

Then they told him it was improperly packed
He showed them the two hefty boxes the peanuts, and the small size of the camera

Then they told him there was no coverage for used items because they had no way of knowing if it worked before it was shipped.

Drake may well have improved the odds UPS would pay a claim if your radio was damaged. Odds are UPS is not going to argue with them if they can say "This is the same box we always use, do we need to change shipping companies?"

I think the best thing you can do when shipping by UPS is make sure you put large red "Fragile" stickers on each of the 6 surfaces of the box.

For heavy items, you can shore up the box by lining the inside with masonite.

It's also a good idea to be friendly with your driver, and let him know when you're sending or expecting fragile items. This won't guarantee someone else won't mangle your package, but it makes it likely at least one of the people handling your package won't drop kick it.

As for bitching at your driver, consider how you'd feel if you got yelled at for something one of your coworkers did.

This was posted last Thursday to the scan-l list by Larry Van Horne at
Grove/Monitoring Times.

Harry
http://www.snowcrest.net/marnells <~~ radios, cop stuff, LAPD, trains etc

Greetings all,

Just a quick update for all on a couple of new scanners coming down the
pike. I talked to the Undien folks today and the BC-780 has still not been
FCC type certified. They now indicate late fall at the earliest. Looks like
the 780 will be on Xmas list instead of the promised May/June delivery that
the Uniden people put out at the CES show. The new Icom R-3 has also not
been FCC type accepted. The Icom folks told me they expect to deliver their
product to market in the September/October timeframe (probably about the
same time frame as the BC-780). So now you have the latest info we have
direct from the horse's mouths. ;-)

73 all,

Larry Van Horn

I think the UPS guys like the boxes with the large red fragile stickers on them the best as these are the ones most likely to get mangled.
I've had alot of things shipped through UPS and by the looks of it, people have intentionaly
thought it was funny to destroy my equipment, mainly by bending it or destroying the packaging.
I have found out one thing though, the smaller and lighter the package, the less chances of it being
destroyed are.
I had a rare musical keyboard shipped by UPS which weighed 40lbs. The keyboard litteraly showed up
with the package busted, peanuts falling out all over the place and the keyboard busted in many places
and a pile of keyboard parts and shrapnel at the bottom of the box.
I think UPS uses orangutans (those big, longhaired orange apes<sp>) for package handlers, and I think the
handlers enjoy seeing just how bad they can damage our packages.

How about shipping via FEDEX or some other company that is actually in the shipping business.

Perhaps because there is more competition for smaller and lighter packages from priority mail.

Priority mail is actually pretty good.

I would consider YOUR message more a SPAM message than the
original message to this thread.

He started the subject line with FS: which clearly shows that he
has an item FOR SALE. This is acceptable in most newsgroups.
YOU can set your newsgroup reader to filter out any FS: messages
or FA: for auctions.

Lighten' up.

Save yourself some trouble, do not use RPS. I ordered a mobile antenna for myself, upon its arrival, 3 1/2 weeks from time it left the factory, RPS finally dropped it off. When it arrived the outside cardboard tube was crushed and heavily taped, when i cut the tube open the antenna had been broke and the board (1 1/2" thick) had been snapped in several places. My current employer now ships our paychecks by RPS and they send them out 1 week early just so we can get them on time, this does not count the times they have been left <without a signature>, got soaking wet or other problems.

UPS had a habit of "leaving" my packages outside when no one was hope when I complained they started delivering them to my neighbor who "misplaced them" or opened them. Upon several IRATE phone calls and BI**H sessions my problem is now solved. I do not ship or receive, if possible, anything from UPS>>

You have a 1/4 wave antenna and the formula for it is 246 devided by the frequency in MHz. The results will be in feet and you need to convert that to inches. That number is modified by the diameter of the antenna, but should be close enough. Around 18 inches for 150 mhz, 6 inches for 450.

BiIl,

Think about this, will you? Computers are getting cheaper and
cheaper, but they don't make Drake R8's anymore and, if you've got one in
good shape and enjoy SWL...keep it. You can probably scout around and find
a cheap computer that will suit you.

What are you talking about? USPS accepts the package and a USPS
employee delivers it to my house...Are you saying someone else
handles it in between? What is you source?

You'll regret it! The computer will depreciate, possibly very rapidly. The radio has lost most of it's depreciation and will continue to hold its value from here on out.

If you don't get a good offer soon let me know, I'll find a computer and swap you!

Al

Source record: 85183

Found the CHP fixed-wing aircraft using 42.34 to locate speeders on I-80 westbound between Applegate and Clipper Gap. The cruisers were using Tac-1, Tac-2, etc. ID's. I thought they had switched frequencies since I hadn't heard much speed enforcement activity on that channel lately. Have not heard any traffic on the 45.xx listed freqs. Reno travelers beware!!

I live on the second story and watched the UPS driver stop at the
bottom of my stairs and drop the box my new R8500 was in from waist
height. He looked up and say me and said that he was saving the stairs
for last (He had another small package to deliver to another
apartment). The R8500 seems to work ok, I guess thanks to ICOM
packaging. The driver had come the day before and left the little
yellow note.

Well, I was never able to "expunge" this black mark from my record. I was sent the radio newsgroup charters by AOL and still couldn't find anything prohibiting a "FS" or "FA" post. Believe me, I despise spam as much as anybody and don't necessarily like going through a newsgroup to read ten posts from the same person either advertising the same item or a different item for each subject. I simply wanted to let someone else enjoy a pristine PRO-43 scanner with all the goodies to get somebody started.

I sent various e-mails to try and get this straightened out, but they told me "tough luck." I even sent them an e-mail with all of the FS and FA auctions listed currently and guess what they wrote back? "In order to process your report accurately, we need complete information including:

1. Copy and paste of the post that is offensive from the subject line to the bottom of the post. Please include all header information available.

2. The newsgroup in which the post was found.

3. The member you are reporting.

Please respond to this e-mail with complete and accurate information." They thought I wanted to turn somebody in!! It's funny, because I have been with AOL since they were DOS based and have been on eBay over four years with no bad feedbacks. Now I feel like a leper...

Thanks for all of the replies, and happy scanning!

Chris

The company I work for does some of the evaluation and repair of a few types of electronic goods for UPS. It is really frightening what they can do. I could fill an entire book with some of the "How the hell did they do that?" stories.

The joke around the shop when someone is in the market for something new is, "Make sure you ship the old one UPS!"

an thatsa big ten-rodney gud buddy. There will allways be one born every 60 seconds who would rather pay a super inflated price and then get the promissed 20% discount.
Kinda the way my lovely and gifted daughter was at 14, "look how much I saved Dad." We have fun with that now that I have school age grand-children by her. We passed Hooper Electronics not long ago and she says to me, "lets stop in here and get some bargains Dad, it's your turn to buy." Again already?"

628. Re: WFM FM and AM

Newsgroup: rec.radio.scanner
Date: 2000-07-13 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <396E5011.D82594E@dialpoint.net>
Source record: 85000

They are differant modes of puting modulation (audio) on a radio wave to put it loosely.

WFM is usually used for the FM broadcast band from about 88 to 106 MHz. You start with a signal on a single frequency and as you put audio on it, the signal will vary plus and minus 200 khz from that frequency. The WFM is Wide Frequency Modulation. Most of the public service, police is narrow band FM. That is 5 khz on each side of the center frequency. If in the wfm and you try to receive the stations out of the fm broadcast band, the audio will be very weak and several stations will seem to be on the same frequency. If you try to use the FM (narrow FM) on the FM broadcast band the audio will be very distorted.

AM is amplitude modulation. It is usually used in the aircraft band from about 107 to 137 MHz. Also the standard broadcast band form about 550 khz to 1.7 mhz.

If the mode is wrong for the station you are trying to recieve, then the audio will be weak , distorted , or both.

The TV stations also use FM for the audio portion of the signal. It is set at 25 khz deviation. YOu can try setting the scanner for WFM and you should be able to hear the TV audio. Don't recall the audio frequencies off hand, but the TV signal is some 6 MHZ wide and in that 25 khz is used for the audio. Sort of a signal in a signal.

Message-ID: <5011-396E68AD-67@storefull-123.iap.bryant.webtv.net>
Source record: 85003

My neighbor just gave me a Realistic Pro-2022 scanner. I'm having a problem with it though. When I turn it on, say to the weather frequencies all I hear is static and then I decided to just leave the scanner on for a while and about after a 1 hour period of it being on it started receiving a signal. Then about 15 minutes after working just fine, it then just went back to nothing but static and none of the frequencies would work, and I couldn't get it to work again after that. I'm thinking that the PLL loop is out of adjustment. Can anyone give me any advise on what to do to my scanner to make it work properly. Please e-mail me if you have any information about this. Thanks.

No, Do NOT put those RED stickers on the box........
I had an employee of mine who used to work for
UPS when he was in college tell me that those
with the stickers and marked fragile are "targeted"
for "extra special care and handling" if you know
what I mean.

MY personal favorite UPS story is about the HP
printer I received. One day this rather non-descript
brown box appeared on my doorstep. Upon opening
it up I found my nice brand new printer. It looked
like it had exploded inside the brown box. Of course,
the software, cartridges and accessories were all
missing and half of the insides of the printer were on
the outside of the printer. Inspecting the brown box
closer, I saw that the box clearly had UPS logos
neatly stenciled on the outside. (It was a UPS Box)
Then I noticed that the shipping label had been neatly
cut around the edges with a razor-blade and taped to
the brown box. The label was originally attached to
a box that clearly said Hewlett-Packard when I peeled
it off!!!!!
Of course, UPS sez that it was shipped that way
from the sender. I said they didn't, etc... etc....
The sender said, What Brown Boxes???? And you
know the rest.....

And BTW, make sure when you sign for something FROM
UPS you mark the number of boxes somehow on the electronic
sig-pad you sign on. UPS can CHANGE the # of boxes you've
just signed for AFTER you sign for them. SO, I f you get three
boxes, put a "3" after yer sig and circle it. They cant change the
sig-line you sign on. Just to make sure you get those boxes
and the driver doesn't take one home for himself!

Police Call on CD-ROM at Radio Shack
--
I took that POS from RadioShack back.
The store that sold it will not take it back saying you probably copied it.
So I took it to another store and had them charge it back to the original
store.

It as no copy and paste.
The program is done with an obsolete Dbase program.
To add to the pain they use an obsolete data format based on Bill cheeks old
scanner interface.
No one else uses that format with any of the modern radios except WinScan
and they (surprise) are the programmers for this POS also.
It is non intuitive.
It is much harder looking up data then buying the book and looking up items.

All in all it isn't even worth the price of a free CDR to make a copy of and
it certainly isn't worth $35 or even the current $25!

Did I miss anything? It has been a couple of weeks since I got rid of the
copy I wasted my money on. At least I got my money back but I figure my time
to buy it, install it, and uninstall it is worth something so overall it was
a net loss. I very seldom return software but this one made me so angry
RadioShack was going to eat it at all costs. Fortunately I didn't have the
opportunity to let RadioShack know how I felt about them stocking this poor
quality item.

Well....I actually had UPS destroy a package for me. It was insured and they immediately denied the claim after sending an "investigator" out to the residence saying that I didnt pack it sufficiently (which I did). I finally won the claim after pointing out that I had sent it from their service desk and their clerk should have notified me of improper packaging. Basically if their agent took it he must have found it to be satisfactory. My claim was paid in about 3 weeks.

Peter,

Regarding the updated/new frequencies you listed recently.....

Canton, MA - Is that police or fire?

Sharon, NH - I do not have any listing for Sharon, NH. Also, is it PD or FD?

Baldwin, ME and Dover, NH - Same question, PD or FD?

Any PL/DPL Codes for all the freqs you listed??

Thanks,
Ted
Boston,MA

You're absolutely right. I just thought it made sense to keep the posts relevant. On the other hand, a message with the topic "Re: any Cheek updates?" might have actually contained information about Bill Cheek rather than an unrelated flame. How else do you know unless you view the post?

>If you don't like it, stop reading alt.fan.bill.cheek -

I was reading the alt.radio.scanner posts only. I'm not familiar with the Mackey/Cheek flame war.

Not much interested in this stuff, scanning, anymore. I've had, it's the old version, 5sec delay, for about a 7months and looks brand new. It sits in the house not being used most of the time. Comes with whatever it comes with when you buy it brand new. I also have a leather carrying case.

Price: $150 shipped prepay, COD or PrePay

I personally don't like UPS. I remember when I was parked at
the customer counter waiting for someone to ship an item, I saw
a UPS worker take a box MARKED FRAGILE and toss it from the
conveyer belt into the back of a truck. The distance was about
15 feet.

Anyway, here is a link that may help you when shipping with UPS.

http://www.ups.com/using/services/packaging/guidline.html

This link will give you the UPS guidelines for packaging your
shipment.

663. WTB: ICOM IC-R1 parts

Newsgroup: rec.radio.scanner
Date: 2000-07-13 00:00:00 UTC
From: wjoew@aol.com
Message-ID: <20000713145622.04959.00001110@ng-cg1.aol.com>
Source record: 85077

Need several of the front nameplate/LCD bezel for the R1 (could use 6). This is a grey plastic piece about 1" x 2" with a cutout for the LCD window.

Any ideas as to where they could be obtained would be appreciated. ICOM cannot suppy.

Joe

Not much interested in this stuff, scanning, anymore. I've had, it's the old version, 5sec delay, for about a 7months and looks brand new. It sits in the house not being used most of the time. Comes with whatever it comes with when you buy it brand new. I also have a leather carrying case.

Price: $150 shipped prepay, COD or PayPal

OK folks....

I need some more people to please send in a picture of their scanner area/shack.
It doesn't matter if you just have one scanner or twenty scanners.
Just send in a picture of yourself listening to your scanner(s) and a short Paragraph on how you got started!
It's that simple. I will add anyone who sends me a story and picture!
Your feature will run *at least* one week, maybe longer depending on when and how many others I receive.
If you have a webpage I will also add a link at the end of the article to your site if you want.
http://www.webdeals.net/feature.htm

Scanner users
Visit the Scanner Nuts! &#65533;
http://www.webdeals.net/kd4lyp.htm
0ver 225 scanner pictures for your viewing pleasure.
In God we trust, all others we monitor.

I want to add John Porter, using the E-mail address oceans1@olg.com to the GOOD GUY ALERT list here.

John recently sold a bunch of used RELM HS-200 scanners, and I was most fortunate to be able to get one. The price was more then fair, and the condition of the scanner was like new, better then described by John.

John sent the scanner to me the same day I sent the money order to him. It doesn't get any better then this here, on Ebay, or anywhere else.

Hats off to John Porter.

Dan

I understand completely - as a long time reader of rec.radio.scanner, I was miffed too when the flame war between Cheek and Mackey started. Then I got into it, and became a part of the problem.

It is quite unfortunate that for the last few years, just about any post relating to Bill Cheek has been part of that long lasting flame war. I understand if you weren't previously aware of it. A lot of people have come and gone, including Cheek. One person, however, refuses to give up the fight. If you continue to follow the threads (still mostly in rec.radio.scanner) you'll understand eventually.

However, it's probably better if you just killfile the whole thing altogether. But watch out for that "one person" I mentioned above. He'll keep changing his From: line to get past the numerous kill filters that people have created over the years....

Re read the sellers statement, All Frequencies Allowed by the FCC. This
is just a non PC version of the Sony scanner that is available through
other net sources for under $100. The guy is just trying to get a huge
price for a scanner worth much less that his price. Fortunately it
appears that no one has bit yet.

The BC245XLT is the most capable trunktraker available (base or HH). If you want to wait a few months, you can get a BC780XLT (mobile) which should be the greatest thing since sliced bread.

I just bought the BC245XLT scanner. I understand trunking. I have the manual that came with the scanner. I need to know where I can find some better instructions. I would like to know how to store IDs in a certain bank then search only that bank. I would like to keep the police , fire, ambulance, ect. in separate banks and scan only the bank I want to listen to. I cant for the life of me figure it out with these instructions that came with the scanner. Do you know where I might be able to find better instructions for my scanner. This news group has been helpful in the past and any help now will be greatly appreciated. Thanks , HIII

>Thanks , HIII

While the scanner is scanning the trunked system press the MAN button.
Use the Up arrow and down arrow to change to the trunk bank
and then the trunk channel you want to program in the bank.
All you need to do now is just enter the trunk id and press enter.
To clear a ID all you need to do is press 0 and then enter.
You can select/deselect a trunk bank when the scanner is scanning a trunked
system by pressing the 1-0 buttons to turn on and off a trunk bank to scan.

Yes, and I just got a nice used laptop for about $150/$200.00 less
than what they go for around here even at the computer shows ($310.00
shipped vs ~ $500.00 here) . Check the seller's feedback and check
prices before you place that bid. YMMV.

I've seen plenty of ebay auctions end without a bidder when the
starting price is too high. Often, they relist with a lower price and
then it sells. That's the free market system!

Bill,

I heard or read once where a real estate purchaser had a rule of, "Make at least one ridiculous offer a week!" You'll be surprised how often someone takes that offer! They may be looking to buy it at a price that allows them to resell and make some bucks.

I forgot about the VHF. You *might* get $550 or so for it with that. I have seen some R8s for anywhere from about $425 to $550 by themselves. Not to mention one at a hamfest the fellow still felt was worth about $825! It was not the A or B, just R8. Don't know if it had VHF or not.

Here is a list of the pre-ban scanners of which I am

aware that should be capable of frequency restoration:

PRO-2004 BC-855XLT *3 Regency 4030

PRO-2005 BC-200XLT Regency 1600

PRO-2006 BC-205XLT Icom IC-R10 *7

PRO-2022 BC-760XLT *4

PRO-2026 *8 BC-700A *3

PRO-2027 BC-890XLT *4

PRO-2030 BC-950XLT

PRO-2032 BC-2500XLT *3

PRO-34

PRO-37

PRO-39

PRO-43 *1

PRO-46 *2 *5

PRO-51 *6

PRO-23 *6

Note 1: Date code of 2A4 (Feb94) and prior, any xA3, any xA2 (label in
battery
compartment), or no "A" in the serial no. (Date code 3A4 (Mar94) and after
WILL
NOT WORK !)

Note 2: Date code of 2A4 (Feb94) and prior, any xA3, any xA2 (label on
back).

Note 3: Date of mfg code must not end in the letters "ID" or after. (ID=94),
except for OAID (Jan94). (On BC700A some "OBID" (Feb94) work)

Note 4: Date of mfg code must not end in the letters "ID" or after. (ID=94)

Note 5: Units with date code of 5A4 (May94) can tune the restored
frequencies
in 30 kHz Steps using a keyboard entry sequence after a wire on the "newly

attached" daughter board is snipped.

Note 6: Units with date code of 6A4 (Jun94) and prior (and some 7A4) can
tune
the restored frequencies in 30 kHz Steps using a keyboard entry sequence.
After
date code 7A4 (Jul94) no mod can be done.

Note 7: The current 1998 models are. New reports say Icom is now only
importing non-modifiable versions.

Note 8: Model (catalog) number with "B" at the end not modifiable. (Reported
no
L201 jumper on the circuit board)

The below list are those scanners that were capable of receiving the full
800
MHz band,

without modification:

J.I.L. SX-400 AOR-950 Icom R-7100 *

Regency MX-4000 AOR-1000 Icom R-1*

Regency MX-5000 AOR-1500 Icom R-100

Kenwood RZ-1 AOR-2500 Icom R-9000

Uniden BC-800XLT AOR-3000 * Icom R-7000

Yaesu FRG-9600 AOR-8000 *

* pre-1994

had a cituation on America West this past Sunday..... WAs told flight would leave in 2o minutes.. you'd beter hurry and get to the gate.... I ran like OJ Simpson through the airport and got to the gate.... I was at gate 40... Then America West does a gate change and sends everyone a mile back to gate 10..... Then at gate 10.. they load the plane with people but there was no ground crew to load the plane with cargo, baggage, or even fuel.... plane did not leave til almost midnight.

I have a scanner and was monitoring the America West ground operations frequency..... what a mess.. but what fun listening

America West PHX was using 935.175 and 935.1625 for ground operations. I bbelieve thir ramp tower was 128.175mhz The regular clearance delivery is 118.1 and ground was either 119.55 or 132.55

I find monitoring hte airlines ground operations frequencies can sometimes be interesting.
America West in Phoenix was heard this week on 935.175 and 935.1625

Delta use 460.75 I think they use this frequency system wide.

This is exactly the procedure they used on me, they must have about 20
excuses for why they won't be paying your claim. Sad thing is old folks and
many nice people just say, "Oh, too bad, I don't get paid," and go away. UPS
wins. Sad story. And what about the crime of charging for insurance then
only paying for whatever UPS says it is worth? If you paid for $300
insurance you should have $300 if they destroy or lose the package. The
package should be marked "$300 insured" and it should be treated like UPS
has $300 invested in it.

Dear Joe:
Thank you for your inquiry. We sincerely apologize for the condition in
which your merchandise arrived. We will be happy to enter a Damage
Inspection Report. Please forward the following information in addition
to that which you have already provided:

- shipper's name, business name, address, ZIP Code and phone number
- receiver's name, business name, address, ZIP Code and phone number
- shipper's UPS account number
- tracking number
- ship date
- weight of package
- invoice number, purchase order number, package ID number (if applicable)
- value of damaged merchandise
- a detailed description of the damaged item (including model number, color, size, etc.)
- discovery date
- disposition of the package (whether it is with the shipper or the receiver)

Probably the best buy right now is the RadioShack Pro 92. It's a 500 channel multi-trunking scanner with cloning and PC interface abilities.
Multi-trunking means that you can scan up to 10 different trunked systems at the same time or mixed trunk and conventional banks. It's got 10 banks of 50 channels. They're on sale now at RadioShack stores for $249 (normally $349).
It can track Motorola type I and II, EF Johnson, and EDACS (GE/Ericsson) systems.

> into my Radio Shack PRO-92 scanner. Can anyone help? Post or e-mail me,
> please.
>

Just pick a channel bank start entering the channels. For example start at 500 (bank 5) and enter the frequencies one by one. For the first one, you'll have to hit the MODE button after entering the frequency to indicate what type of system (MOT, ED, etc) but normally it'll automatically change to that on the succeeding channels. Then when you're done you enter the fleet maps (for type I) or just set it to scanning and when you hear it stop on something interesting hit the TRUNK button to store that ID. After you have some IDs stored, you can CLOSE the bank (FUNC/2 will toggle that off and on when you are sitting on any of the trunking frequencies in that bank by using the manual or prog buttons). If it's closed, the scanner will only stop on the IDs that you have stored. If you leave it open, you'll have to lock out the data channel (the one that makes all that noise!)

It takes a few days to figure it all out if you haven't done it before, but after a short while it all becomes clear. Feel free to email me if you have any further questions. http://trunkscanner.com/ is an excellent source of trunking channel info and also ID info..

Have you checked at http://www.trunkscanner.com/states/ar.html ? The
control frequency for trunking can change from time to time (anything from
several seconds to several hours). What I mean is that among the frequencies
used for the trunking system, one is usually used as the 'control channel'.
Which one is used at any given time can very....

: home? :)

By the interpretation apparently being followed, it has to be
hand-carried, on foot. If you mail it, it's on a vehicle for at least
part of the trip. Yeah, it's crated up for shipping and all, but what
difference does that make? Locked in the trunk isn't acceptable either,
apparently. How much more accessible is it when it's sitting next to the
delivery driver 'cause (s)he's about to pull up at your mailbox to make
the dropoff?

714. *F.S. Uniden Bearcat BC 200XLT

Newsgroup: rec.radio.scanner
Date: 2000-07-14 00:00:00 UTC
From: Gary <gbaker@pacifier.com>
Message-ID: <396ff820.0@news.pacifier.com>
Source record: 84978

One of Uniden's all-time most popular scanners! Hasn't been manufactured for over 6 years, but still a favorite today. Features 200 programmable channels plus one-button weather to quickly access NOAA weather frequencies active in your area. Frequency coverage: 29-54Mhz, 118-174Mhz, 406-512Mhz, 806-823.9875Mhz, 849.0125-868.9875Mhz, and 894.0125-956Mhz. This unit has not been modded but I understand that there are some interestesting mods for this one. This 200XLT is in very good condition for it's age, I has normal wear but not all beat up and has been in it's protective case most of it's life. Comes with stock rubber antenna, Bearcat AC adapter/charger and carrying case. I do not have owner's manual with this but not much to it and i'm sure if you really wanted one, you could find one on the net!!.
I will take $160 plus some help with shipping.

I have 2 six foot satellite dishes with mounts I am trying to
get rid of. They are free to anyone who wishes to take them
away. One dish is fiberglass and the other is metal. Both
are in good condition but need a little cleaning. I might even
pressure wash them if someone is willing to take them.

They were supposed to be used at a 2M repeater site for
relay of the NASA TV feed but the plans have been scraped.

Dear Deja board;

Michigan law MCL750.508 prohibits possession of a scanner in a vehicle
(1 yr in jail plus a $500.00 fine.)

Michigan residents may apply for a permit from the state police
Tourists Cannot, and will be considered a criminal as soon as you drive
across the border.

The Michigan state police say you cannot even have a scanner in your
luggage in the trunk....over 35 county prosecutors agree.
NO SCANNERS in CARS.

Hams are exempt for this law.....(Better have your FCC license)

I was nearly arrested for this law, Frisked , locked in a police car,
while my car was searched for further contraband.

A protest of this law has started,,,,,YOUR help as radio
hobbyists...tourists is NEEDED....!!!
please got http://www.trainwatchers.com/index.html

the law is on this site, as well as a plea for support (letters) to be
written to Michigan's govt. and tourism industry.

After you read the post if you agree with the sentiments contained,
please warn your friends, and if possible HELP.
EVERY letter counts.

Thanks for your time
Mark Bajek.

The guy has a right to ask whatever he feels like asking for his property. He isn't depriving anybody of the necessities of life, just trying to (legally) profit from their stupidity. As P.T. Barnum said: "There's a sucker born every minute." You have a right not to bid on his auction. His listing may be misleading, but on the other hand, when was the last time you bought gasoline at a station on the Interstate? Ever had one of the attendants tell you "We're getting more for our gas than the guys in town. There's a price war going on and everybody else has dropped their price by 15 cents." You going to get on the newsgroup and complain about the a**h**** at Love's selling their gas for more than the 7-11 store? I saw the auctions also, laughed, and went on with my life.

738. FS Pro-2026 scanner

Newsgroup: rec.radio.scanner
Date: 2000-07-14 00:00:00 UTC
From: Scott <phazer@lni.net>
Message-ID: <JcCb5.28$aa.6639@news.direcpc.com>
Source record: 85032

I have a used pro-2026 mobile scanner for sale. It works great! The display is nice and bright, and not all scratched up. It has the wiring mod done to it to be able to accept a 9-volt battery to hold memory, and a 12volt dc plug added to the back to power it. The top and bottom sections have 4 small holes(covered w/ tape) that I assume had some kind of mounting plate hooked to it but not sure. It has the mounting bracket w/ the finger screws on both sides. I'll have to find the ac/dc adapter for it(hoping I still have it). It does have an antenna(for in house use) which is not bent. It also has 4 rubber feet on the bottom of the scanner. I also have a photocopied manual for it somewhere.

The date code is 8A2 also!!

If needed I could take a few pic's of it. If I don't sell it on here then it's going on ebay. I figured i'ld give you guys/gals a chance first. I'm asking $120 shipped to your door. If you don't want to pay that, then make me a good offer. I'ld be willing to take paypal as payment method or money order. I have good comments on ebay if ya would like to check. Just go there and find the place where you can check users comments and enter my email which is phazer@lni.net .

Thanx,
Scott

Bill,

If someone offered you a $3000 computer with dual 700 MHz processors, etc. etc. today for your $500 R8 you'd still regret it 5 years from now when the R8 is still worth $500 and the computer is worth about $150 to $300 or so! Keep what you have. Buy a computer! But like I said before, if you insist on getting rid of it, I'll find you a computer that I'll trade you for it! I might even have an old RS TRS-80 Model III that cost me about $1200 + -- by the time I bought the data cassette recorder and some program (singular) to go with it. Plus it later had over $1500 "extras" added to it, such as a serial port, dual floppy drives, etc. That's about a $3000 machine, not counting the sentimental value. :-)

Of course, if you're "lucky" enough to get it, you still won't have a hard drive, color in the monitor, etc. That was only about 20 years ago. Oh, I think it ran at a break-neck speed of about 5 MHz. Can you imagine trying to keep up with something running a blazing 5 MEGA hertz? WOW!

Keep your radio. It won't loose any more value. It's probably old enough now to start increasing in value. <g>

Al

AL!

A brother of the breed!! I had the second Model I sold in the state and it ran a 1.717 mHz.
Owned several Model IIIs... MOF: still have a service manual around here for it.

BUT the intent of my oringinal post was in agreement with all .... been doing radios and
computers most of my life. I can think of several classic radios that I regret parting with...
BUT not a SINGLE computer.

Bill, you can buy a state of the art computer with the trimmings for 700 to 1000 bucks...
Buy one.. keep the R8!!

Only one little additon, not only FM BCB uses WFM, but TV audio is also
WFM. And it is also good for snagging the polar orbiting WX satellites.
While it is TOO wide, too wide is better than too narrow.
Oh, and some STL [Studio Transmitter Links] use WFM on 26MHz and I have heard
some STL with WFM in around 900MHz.

I'm running a Gateway DX2-66 that I paid $3500 for in 1994, even though most
of the guts have been replaced. I'm retired and haven't had much spare cash
lately.
But looking on pricewatch.com it seems almost certain I'll be better off
buying a
new Celeron for about $350. It certainly would be a lot better than what I'm
using now.
Some of the people who have offered to trade seem to thing my R8 with VHF
conv.
and MS8 speaker in outstanding cond. is only worth about $100 - $200. I'm
not
going to let anyone steal this fine rig. But they sure do try don't they?

UPS left our new Icom IC-R-8500 and AOR 5000 sitting out in the rain, on the front porch. I was sitting in the office waiting for them to show up - they never rang the doorbell or even knocked - just dropped it and ran despite needing a signature. Both were ruined and that was another month of fighting with them to replace the items - not cheap items either. (They suggested I wait for the receivers to dry out - maybe use a hair dryer to dry them and then see if they would work) They finally did make good, but only because I and the vendor threatened to never use them again for our business and said I would have the rest of our NACSAR businesses boycott them too.

USPS is even worse - shipping to Canada recently they told me they did not offer insurance or any form of tracking to Canada. I knew this could not be but shipped the radios anyway - after they did not show up a week and half later I called the post office - the pinheads actually laughed when I asked to if they could trace the shipment and said "No way to do it - you should have purchased insurance and gotten delivery confirmation"...

Niether brains nor sleet nor snow....

Imagine singing or humming a constant note. Now try to send a simple Morse message to someone the other side of the room with your humming. Yes, you'd sound ridiculous, but bear with me!

You could either vary the loudness of your hum, or the pitch/note. If the loudness (Amplitude) varies, you have Modulated your humming by an AM method. If the pitch (Frequency) varies you have Modulated by an FM method - the amount of change of pitch determines the "wideness" or "narrowness" of the overall range of notes you produce. The constant humming (assuming you can circular breathe like a didgeridoo player!) is the equivilant of a radio Carrier Wave that carries the modulation. On the other hand you could hum the Morse and stop between each dit and dah. Then you would be sending the message using just the carrier wave, switching it on and off - like the radio CW mode.

Note that your modulation signal in these cases is just the on/off of the Morse you are sending. You can electronically modulate a music note with a microphone - the AM result sounds like an robot or something (an old E.L.O. vocoder effect for example), with FM you just get a splashy noise as you speak. (If you suppress the carrier note while you're not talking, using a balanced mixer circuit, you end up with a "ring-modulator" much more often used for robot effects.

An electronic organ will often have it's own way of applying a slow varying modulation - AM/FM is like the difference between vibrato and tremolo, adding interest to each note by varying it slightly a few times a second.

Any constant radio carrier can be modulated by a signal (such as voice, music, digital on/off) in either way (and more!) on any frequency. We just happen to have AM on the MW band and FM on the VHF broadcast band. FM has its advantages over AM, and wider Frequency Modulation allows for more HiFi sound.

An FM receiver will be responding to changes in frequency within it's tuned frequency range. When there is no signal the Detector circuit will track the background noise as a random waveform, the result is a loud hiss. With AM, the detector responds in sympathy with the received signal strength - so an absence of signals means very little noise produced by the radio. This makes a mobile AM station much more pleasant to listen to than an FM one. On the other hand, if you are getting a strong FM signal any interference lower in strength goes virtually unnoticed -

a strong signal overrides a weaker one (the Capture Effect)
whereas with AM all the signals combine and mix together, along
with a horrid noise produced by the carrier waves "beating"
together.

Clear as mud?

I've about decided on purchasing a Bearcat 120xlt but would like to hear if anyone has any really bad feelings about that unit. I have looked for reviews of that scanner but have found none and have been lurking here to see if there has been any mention of the scanner. I imagine it has been around for awhile and the news is now old.

My main use is listening to railroad communications. The local police, etc. hasn't gone to trunking so I don't really need the 245xlt. The 245 was my first choice, but I talked myself out of it in favor of the 120.

Any opinions?

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com |

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor

controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040

Monitoring ACSB (amplitude compandored side band)
Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and
MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner
Apr 2000 - Understanding Intermod,
(comparison intermod performance of several models)
May 2000 - Radio Shack PRO-94 portable
Jun 2000 - Radio Shack PRO-2052 trunk tracking base scanner
Jul 2000 - Electra Tiger Scan TSA portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO).

Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio,

otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke

sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the

ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier

vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder.

Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see

"The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more

than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has

some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod

immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners

have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they

were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock

out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal

case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated July 14, 2000 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

JULY 2000

Jul 8 (Sat): Oak Creek, WI - South Milwaukee ARC. American Legion Post 434, 9327 South Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info, call (414)762-3235.

Jul 9 (Sun): Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. I-57 to Peotone exist 327 (East). Free parking. Talk-in 146.94 MHz. http://www.w9az.com. Admission $5. Info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. Tel: 815-939-7548. Email: k9nr@juno.com

Jul 15 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Jul 16 (Sun): Orland Park, IL - Giant Computer Show & Sale | (see below). Orland Park Civic Center, 147th St. & Lagrange | Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

Jul 23 (Sun): Sugar Grove, IL - Fox River Radio League. Waubonsee Community College. Admission $5. http://www.frrl.org/hamfest.html Info: Maurice Schietecatte, W9CEO, 813 Cindy Lane, Sandwich, IL 60548. Tel: 815-786-2860. Email: W9CEQ@arrl.net (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2000

Aug 12 (Sat): Quincy, IL - Western Illinois ARC. http://www.qsl.net/w9awe. Info: Jim Funk, N9JF, PO Box 3132, Quincy, IL 62305-3132. Tel: 217-336-4191 . Email: jfunk@adams.net

Aug 13 (Sun): Peotone, IL - 66th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $4.00 in advance with double stub, $5.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Christine Mack, PO Box 2161, Oak Park, IL 60303. tel. 708-358-1786, email: christine1@mediaone.net. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 19 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Aug 20 (Sun): Orland Park, IL - Giant Computer Show & Sale | (see below). Orland Park Civic Center, 147th St. & Lagrange | Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

Aug 27 (Sun): Danville, IL - Vermilion County ARA. Info: Gary Denison, KA9SKS, 14704 East 2750 North Road, Danville, IL 61834-5610. Tel: 217-759-7389 . Email: gdenison@danville.net

Aug 27 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

SEPTEMBER 2000

Sep 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Sep 16 & 17 (Sat & Sun): Peoria, IL - Peoria Area ARC. Info: Ron Morgan, KB9NW, or John Coker, N9FAM, both c/o: PO Box 3508, Peoria, IL 61612-3508. tel: (309)692-3378. Email kb9nw@juno.com or n9fam@juno.com. http://www.peoriasuperfest.com

Sep 17 (Sun): Orland Park, IL - Giant Computer Show & Sale | (see below). Orland Park Civic Center, 147th St. & Lagrange | Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. http://www.chicagofmclub.org. Admission $8, good both days. Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best hamfest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000

Oct 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Oct 15 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

NOVEMBER 2000

Nov 5 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 11 (Sat): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 12 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Nov 18, 19 (Sat, Sun): Ft. Wayne, IN Fort Wayne Hamfest & Computer Expo. Allen County Amateur Radio Technical Society. 2000 Indiana ARRL State Convention. Allen County War Memorial Coliseum Exposition Center. Hours 9 AM - 4 PM EST Sat, 9 AM - 3 PM EST Sun. Admission $5 plus $2 parking. http://www.acarts.com

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see | below). DuPage County Fairgrounds, County Farm Rd. & Man- | chester Rd. 9:30 AM - 3 PM. Adults $6, children $2. |

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale | (see below). Orland Park Civic Center, 147th St. & Lagrange | Rd. 9:30 AM - 3 PM. Adults $6, children $2.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

For anybody else interested:

After checking it out, I guess Displex has a website:
http://www.displex.com It sells for about $7/tube
and is available here in the US.

Any other suggestions are still appreciated. Thanks.

Yeah, but what is it called? Is there a webpage? I think it is not out
yet.

Not much. But the consensus is, and has been for years, that what the
PRO-2006 does it does better. I believe the criteria used is overall,
rock-solid performance in a scanning receiver. Oh, and then there's the
Optoelectronics computer interface and Probe software. That's about it.

i think youre referring to Brasso, I use it on my scanner i bought mine at an Army supply store, but is available anywhere...Just rub some on a fine lint free cloth and rub it around on the surface be sure NOT to let any spill onto or touch the case as this will leave a dull finish on the plastic.Then just wipe it off with a clean lint free cloth.

When I was there at Thanksgiving it was a mixture of analog and digital.
The July issue of Monitoring Times has some information on the systems used
in Albuquerque. There was some information on Rich Wells Strong Signals
site a while back about an add on board that will demodulate APCO 25 digital
modulation. It may be available later this year.

Anyone know of a U.S. outlet for the Airmaster 2000 software
from Lowe in the UK? I've got the Lowe interface and an earlier version
of the software and I'd like to get something that would run in Win 98.

Yep, the 2004 is a pleasure in its own right. And the tuning knob and 1000 stock channels on the 2042 is great. I'm extremely partial to the GRE-made scanners because through their lineage they seemed to concentrate on what Bill Cheek termed the 'steak' rather than the 'sizzle'. It appears that the BC780XLT will continue what the BC245XLT started and do the same.

Aviation frequencies use the 108-136 MHZ range. Frequencies between
108-118 MHZ are used for VHF navigational equipment such as VOR recievers,
Localizers, and Glideslope reception. It is not uncommon for ATIS
(current airport weather and arrival/departure information at tower
controlled airports) to be broadcast on a VOR frequency (BWI broadcasts
their atis on top of the VOR frequency 115.1). Anything that requires
two-way voice will be broadcast between 118-136 MHZ. Here, you'll find
clearance delivery, ground, tower, approach/departure control, some ATIS,
and the enroute centers. You'll also hear the common traffic advisories
and uncontrolled fields (standard frequencies are 122.7, 122.8, 123.0
although there are others). You will also hear ASOS/AWOS which is weather
information only.

I don't know the FCC rules on band assignment, but you will not hear
general airline employees talking in the air bands.

I've just been recently introduced to scanners and listening to police and fire frequencies. A friend of mine mentioned that some of the Fire Dept's in our area are using digital transmitions more and more and that soon enough most transmissions would all be digital. Is there another device equivalent to the scanner that will pick up these digital transmissions? any help is appreciated.

John,

Your frustration with America West is not unique. A recent issue of
Airways magazine had a feature article on America West entitled; "Is This
America's WORST Airline?"

Hey, it's a free country and the guy can ask what he wants ... and
someone else can point out that the price is awfully high. The First Amendment
applies in commercial speech as well as political speech. There is such a thing
as "price gouging" even if it isn't illegal and consumer alerts are legitimate
and one of the valuable uses of these newsgroups. I don't get involved in that
kind of stuff but if someone else wants to - more power to him!

Dan

P.S. Did you mean "Has" or "As" in our opening line?

Yar <YAR509@worldnet.att.net> asked:
> what frequency does the family radio service operate on? thank you

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

FRS - Family Radio Service [95.627]

Ch	Freq	Ch	Freq
1	462.5625	8	467.5625
2	462.5875	9	467.5875
3	462.6125	10	467.6125
4	462.6375	11	467.6375
5	462.6625	12	467.6625
6	462.6875	13	467.6875
7	462.7125	14	467.7125

The FRS was authorized on 06 June 96. It uses FM with a peak
deviation of +/- 2.5 kHz. Maximum power is 0.5w ERP.
Channels 1 - 7 are shared with GMRS.

Motorola T289 Squealing Problem:

The majority of Motorola T289 TalkAbout FRS radios seem to be defective. Some units will emit a loud squeal when the push-to-talk button is released which is very disturbing and annoying.

Since I originally posted a message to this newsgroup about this problem, I have received multiple emails from people who have had this same problem. There is a message posted to the alt.radio.family newsgroup with the subject "T289 problem" that describes the defect in more detail.

Motorola customer service is aware of the problem.

STAY AWAY FROM THE T289s!

Regards,

Phil Covington

Searched deja news and can't find an answer to my question.

The radio frequency for monitor control used to be 461.075. Checked that frequency at the Denver races yesterday and they are not using that frequency.
Did a lot of scanning over a pretty broad range and could not find it.

They recently changed from Racing Radios to Radio Communications Inc. as a supplier of equipment and that might have changed all the channels.

Anyone know what they use now?

Thanks, Jim

Thanks For the Info!

Yar <YAR509@worldnet.att.net> asked:
> what frequency does the family radio service operate on? thank you

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

FRS - Family Radio Service [95.627]

Ch Freq Ch Freq

1 462.5625 8 467.5625
2 462.5875 9 467.5875
3 462.6125 10 467.6125
4 462.6375 11 467.6375
5 462.6625 12 467.6625
6 462.6875 13 467.6875
7 462.7125 14 467.7125

The FRS was authorized on 06 June 96. It uses FM with a peak
deviation of +/- 2.5 kHz. Maximum power is 0.5w ERP.
Channels 1 - 7 are shared with GMRS.

I also own an AOR AR1000. I happened to find an extensive operation manual on the internet. It is vastly better than the manual that came with the radio.

The website I found it on is www.designeq.com. You will need PDF Reader to download the manual. It contains about any information you could want about this scanner.

I hope this helps!

While needless damage can and does occur during transit, your bigger problem is the shipper. They should not be sending out anything of value with no-signature releases.

Even if you receive a damaged package on your doorstep, (1) call UPS before you open it or (2) call the shipper and have them initiate a claim. Then, too, the shipper might need to do a better job of packaging (like a fiberglass or cardboard sleeve around your antenna) so tell them about that.

Tell your shipper to NOT use the no-signature release. This used to be the only way UPS worked, but they opt for (or default to) no-signature because hardly anyone is at home during the day.

UPS is very service-oriented and if you ask, they will make good on every legitimate claim. The drivers will bend over backwards for you too, if you ask them for help,

(No, I don't work for them)

Dan,
I think the only complaint most of us had was the way he phrased it: "This asshole ~ is really trying to rip people off." If he had said something like: "Can you believe it! Some guy is trying to sell xxxx scanners on ebay for more than they sold for new and claims he's giving a discount. Lotta nerve!!" then the posting wouldn't have stirred so many people up. I've got no problem with free speech, I just like to see people display a little manners while doing so. (I know, vain hope!)

Don't know if you are refering to my post. I use GS-27 or a similar product. GS-27 is the product that is on the infomercials that claims to take out scratches from auto finish. Use very little and swirl over the LCD. Do this for about 10 seconds, and see if there is any change. You don't want to rub too much at one time. I use a diaper or 100% cotton cloth.

I have a PRO 2004 for sale. Electronically a 10, cosmetically a 7.
No damage to case, but it has two holes drilled in the side, and
one small hole in the front panel (I think it was for the LED
squelch mod) for some mods, which were taken out when I bought it
last year. The panel light is still bright, but I modified the
switch to go OFF or DIM. I also did the mod to add an additional
100 channels, and it already had the (GASP!!) cell mod. Works
perfectly.

$200.00 plus shipping from 90706.

Thanks much

Norm/KQ6SD

Yeah, I guess so.. And the new Pro 2067 mobile scanner looks like it's
identical to the Pro 92 but in a mobile form factor, etc.. I wonder if
cloning will work between a 92 and a 2067 though..

And I discovered that I can even mix trunking and non trunking channels in
the same bank on the Pro 92 and it'll work!

which airport was this at? I'm sorta surprised that they're
using frequencies that high. I'm not too well versed on scanners, but
from an old cell phone and pager I have, 900MHz is around the analog
pager/cell phone range.. wouldn't they be more opt to use something
close to ramp and ground control?

group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120

Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the

scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models

are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://www.fordyce.org/scanning/ and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or

anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the

channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have

the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus

service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com |

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

I tried taking out all four screws this time and removing the belt clip (thought there might be a fifth screw), but it's still attached by something near the top. I hope it's not glued like the battery packs.

Using the DATA key you can toggle between three display modes. One of the modes is for scan lists. From there you can turn any scan list on or off. A more complete explanation can be found at www.strongsignals.net. Search for BC245 FAQ and read the whole thing.

Try 310 - 320 Mhz, the remote unit puts out about a 1/100th watt signal. The receiver in the vehicle is a superregen design.

The 5th screw is under the label. You have to destroy the label to remove the 5th screw. That way Uniden knows you've been into the radio.....the BC2500 is the same case.....

enjoy

> WILL
> NOT WORK !)

That's not quite true. I believe *all* PRO-43s without the "A"
in the serial number are cell capable. For example, I have one

that is date code 10A4 (no "A" in the serial number) which is cell capable -- it bears the "Realistic" name, not "Radio Shack". However, this unit was distributed by Intertan Canada (i.e. at the time, this was the Canadian subsidiary of Radio Shack). It seems that around April 1994 Radio Shack stopped selling the cell modifiable PRO-43s in the U.S. but continued to sell them in other markets (until they were all gone).

IF he were searched by customs and they found the scanner, they would look for the FCC ID number which an unapproved scanner would not have. Then they would confiscate it as contraband. No receipt - nothing....and you have NO recourse....

I was on the ground at Memphis for 4 hours while they fixed a water
problem on the plane. Fortunately I had a scanner with me and found
the ground crew frequencies. It's amazing that what they tell you
over the intercom on the plane has no resemblance as to what is
actually going on.

By the way, I hope the persons on the ground for 8 hours waiting
to get off the plane (I don't remember the details) win their lawsuit.
I know what it feels like to be a prisoner of the airlines.

They are totally correct. When shipping delicates such as
electronics, UPS can and does insist on new packaging inorder to
accept a declared value amount.

Notice I said "declared value," v/s "insurance." Its not insurance.

If the package becomes lost, the declared value amount sets the
maximum amount UPS will reimburse. If it is damaged, UPS is under no
obligation to pay unless the box is physically damaged such that the
contents are also damaged. EG: The forklift blade through the box
qualifies for that.

Think UPS is "bad," check RPS or FedEX. IMHO, RPS is the worst.

I am in need of a Widows CE 2.0 or better hand held computer.
I also need to have that computer sync with my desktop for file
transfer.

I have a 2006 with cell mod and discriminator tap that leads to a
Hamcomm interface or simply a RCA phono jack. The radio is in good
physical condition with some surface wear minor scratches and mars.
The radio works just fine except that the back light is real dim.
Comes with manual and antenna. Would sell for $225 plus shipping
I also have a Trident TRX 100xlt in like new condition with manual
antenna and a Radio Shack battery charger for it. Would sell for $240
shipped

If you want to buy one or the other or both I take Money Orders
or Paypal
Email me with offers

Greg

845. Has Mackey been convicted yet?

Newsgroup: rec.radio.scanner
Date: 2000-07-16 00:00:00 UTC
From: John Mackey Sucks <anonymous@cotse.com>
Message-ID: <200007162001.QAA04392@anon.cotse.com>
Source record: 84755

Does anyone have any information on the status of Mackeys
legal troubles with the FCC?

Specifically where he was investigated by the FCC about his
selling of ham tickets? How about where he was
investigated by the FCC about his criminal impersonation
of an FCC agent?

Shit, with all his legal problems right there in
Oregon for molestation, you would think he would try
to keep the feds out of it.

Source record: 84769
Cross-posted to: rec.radio.shortwave,rec.radio.scanner

You take your chances with any shipper. Whoever shipped it to you should have required an adult signature, otherwise they are free to leave it at your door. It was downright stupid of them NOT to do it. Of course, it means maybe making a trip to UPS to sign for it, but I wouldn't have it any other way on an expensive piece of equipment. They pay no attention to "fragile" labels and treat the package same as any other piece of freight...that includes tossing it around in a truck, dropping it from a loading dock, you name it. If it's damaged and they can prove it wasn't packaged bullet proof, then it's your baby once you sign for it. I've had to refuse packages before that had the ends blown open or rattled, and let the shipper deal with the claim. Ditto for FedEx, RPS, AirBorne, and other services. FedEx managed to lose an $18,000 bank draft that was sent to me a couple of months ago for a car loan. Some woman in the apartment complex found it laying in the street and was nice enough to turn it into the rental office here, who in turn, called me. I called and filed a complaint anyway, and the driver caught a boatload of hell over that one.
I ship with UPS and FedEx where I work, and 99% of the time, there's never a problem, but there are no guarantees with any of them. Good luck with claims...they HATE paying them, even if it's only a few bucks.

I would like to think aloud for a moment. In my county we live in a near police state even though many will deny this and ridicule me for saying so. I know the prosecutor, many police, the judges, CPS, etc. I know personally victims of severe government abuse. I guess I am asking myself that even if all of the citizens of the USA banded together to resist the Federal Government and state governments, would it really be possible? Are the citizens powerful enough to stave off an all out government assault on freedom? Am I the only one who thinks on these things? I guess I keep wondering how long we will wait. The Waco tragedy really bothers me. Those children didn't have to die. Even if the adults were guilty of all they were accused of, the children didn't have to die. What kind of government do we have?

But not everyone.

> I know the prosecutor, many police, the judges, CPS,
> etc. I know personally victims of severe government abuse.

Many of us do.

> I guess
> I am asking myself that even if all of the citizens of the USA banded
> together to resist the Federal Government and state governments,
> would it really be possible?

Yes. It wouldn't be easy, and require a commitment far more than
most people are prepared to make, but yes, it would be possible.
Remember it only a third of the Colonists made Independence happen.

> Are the citizens powerful enough to stave
> off an all out government assault on freedom?

That's an issue of much debate. Most believe that the citizens are
no match for the extreme technology of the US military. But they do
not take into consideration the element of human determination. A
poorly equipped and even more poorly supplied Great Britain
successfully held off the Wehrmacht. Poorly equipped, even more
poorly supplied Continental Army held off the best the Brits could
supply. The advantage of home turf and determination made the
difference.

If the government made war on the people, many would surrender in
the mistaken belief that things would go well for them. Other's
would make their stand. The remainder would cheer on one side or
another or shake their heads in disbelief. It only takes the
determined to make a stand.
And remember that the military is made up of citizens. There would
be those who also would be willing to make a stand. And the military
divided, is not such a formidable enemy.

It's not a certainty that the citizens would prevail. But there is
a slim, fighting chance that they could. That, and determination is
all that is necessary to make things happen.

> Am I the only one who
> thinks on these things?

No, you're far from alone. And the bitterly acrimonious firefights
on these newgroups that erupts from such a question and any response
is more than sufficient evidence that these self same questions are
being asked from sea to sea. And the ever increasing attempts to
disarm teh public would suggest that it's not only citizens who are
thinking along these lines.

> I guess I keep wondering how long we will wait.

If history is any indication, "WE" will wait until "We" are
directly threatened. Things that do not affect us, do not trigger
the defensive imperative as a direct assault would. So the
Government makes it's assaults against the few in number, after
dubbing them the radical fringe. The Branch Davidians, the Mormons
at Nauvoo....amazing how history repeats itself.

> The Waco tragedy really bothers me. Those children didn't have to die.
> Even if the adults were guilty of all they were accused of, the children
> didn't have to die. What kind of government do we have?

One that has taken up where the apathy of the citizens has let
vigilance slide.
>
> Bill K9KZ

863. 895 XLT Dead Buttons?

Newsgroup: rec.radio.scanner
Date: 2000-07-16 00:00:00 UTC
From: V65MagnaFan <jsturm@home.com>
Message-ID: <Aerc5.70713$7I1.1114690@news1.rdc2.on.home.com>
Source record: 84773

Hi,

I have an out-of-warranty, repack unit. It's been dropped a couple of times from about two feet onto a padded carpet floor--don't flame me---I know.

Anyway, button "J" and the rotary control lock stopped functioning one day.

This was not coincident to a dropping.

Then, button "E" and number "1" became intermittent.

I opened the unit and looked for cracked boards, broken solder joints, solder or plastic crumbs in the case, anything weird. I didn't get to removing the front control assembly, but I did get to inspecting the ribbon connectors (which connect the front control panel to the main board). I made sure that they were fully engaged on both sides and tested the unit. Now, E, J, 1, 2, 3, and the control lock do not function.

Looks like it's the ribbons, doesn't it?

Now for the question: Have any of you had keyboard problems with the 895xlt? If so, what caused them?

Are the ribbons proprietary or are they or similar ones available at Radio Shack?

And, is this a widespread problem?

Thanks in advance.

Joel Sturm

>Bill K9KZ

I consider myself a loyal American and proud to be a citizen of this
republic. At the same time, I recognize that it's the *principles* upon which
it's founded that generate most of my loyalty. The leader of the Branch
Dravidians was a sick man, even worse for putting women and children in harm's
way. It was a no-win fight and a waste of human life. Even the Founding Fathers
weren't above fleeing the British when there was a price on their heads. If Geo.
Washington had, " made a stand" like Koresh did there wouldn't BE an America
for you to love or revile. Koresh's lack of discretion proves his insanity.

At the same time, Who appointed the ATF as the guardians of liberty?
I think there's a lot to take them to task for. Their actions were ill-advised,
over-reactive and stupid.

Jefferson said, "Eternal Vigilance is the Price of Liberty." I know,
because I drive by the Archives Blding. in Wash.,D.C. every day I go to work.
It's written on the stone there for all to see.

The system they set up *will* work, but only by a concerned and involved
citizenry. Decrying your "lost freedom" won't cut it. What are you prepared to
do? Apathy and the narcotic effect of rampant consumerism are the shortest
paths to tyranny. I'm no liberal, but I'll give credit where credit is due. Read
up on the lives and work of Mahatma Ghandi and Rev. King: No matter what
you may think of them, they took action, organized thousands, and got results.
Grabbing your S&W and heading to the commune so you can bitch and moan
on the USB about them "Gum'int Boys" will get you no where but in some agent's
crosshairs one day. It's your country too, make of it what you will.

Respectfully,

] Andrew

What we need is a powerful citizen's lobbying group (like the ACLU, only even more powerful), composed of ALL the political factions (right, left, middle and independent). Part of the problem is that people are so highly divided along political lines.

If citizens could overcome their political differences enough to form a group as or more powerful than the ACLU but composed of all factions, with members from all races, colors, creeds, sexual preference, ad infinitum... and if such a group could manage to gain power in Washington... it might be a good start.

But I'm not looking for it to happen. People are too divided along the lines of specific issues... gun control, abortion, the death penalty, and others... to be able to unite to form such a group. There would be too much in-fighting for a group like that to gather any power (political or otherwise), and (excuse the cynicism) but I don't believe it would last a week.

I agree, but we don't have that. We have criminals in government.

20 channel base scanner that covers from basically 30 mhz to 512 mhz with
gaps. It does cover the air band but doesn't cover the 6 meter (50 to 54mhz)
ham band!

There is only one mod I know of and its a bugger! Memory channel expansion!
I'm pretty good with electronics and I wouldn't even consider trying it.
http://w5gb.nmsu.edu/kc5kto/mods/pro2020mem.txt

I don't think that was the real John Mackey.
If it was then he wouldn't be joking about sex with 16 year old boys.
No one in their right mind would joke about something like that, esp in public where he is destroying himself.

Are IC-R10's still modifiable?
I heard that ICOM caught on that people were soldering the two resistors and enabling the cell frequencies.
I'm getting so sick of this cell frequency block shit. They need to either encrypt their oh so "important" communications or get up in some frequency range where we will never be anyhow, like 4-8ghz.

881. WTB FRG 100

I would like to buy an FRG 100 or trade other equipment. I have a variety of Zenith TO's in great condition, both tube and transistor, plus a few handhelds (scanner and widebands) Icom, RS, and even a Sony Air 8 in great condition with a lot of extras. I would be willing to trade any of these plus cash if necessary for a FRG 100 with keypad in good condition.

Thanks

The Trident receives cell as it is no mod needed, it is not made for the
US market. Rich Wells has a first impression on it over on
http://www.strongsignals.net

Does anybody know the frequency the vtech cordless phones (900 mhz)
operate on?
Thanks

Fireground Photos.net, one of the largest online photo based websites dedicated to the fire service, has expanded to include online auctions.

Daily growth since the auctions went online at 5:40 PM on July 12, 2000 has exceeded 100%. There are now over 40 items listed, and there is a category specifically for Two-Way Radios, Pagers and Scanners.

Stop by and check it out today!

easy, it is called TOOTHPASTE! really, works great -- toothpaste is a mild abraisive. just put a dab on and gently rub the lcd with a cloth for a while in a circular motion.

cheers

Price gouging is when some ask a higher than normal price for something that is essential, like gasoline for your car so you can get to work, food, or other essentials. I hardly think owning a scanner is essential. If the price is too high, don't pay it. No one is being forced to bid.

No, I "threw in" a $20 manual for $20.00, and raised the total
price $5.00. Now, are you making me an offer, or are you just
being a butt head? If it's the first, what is your offer? If it's
the latter, we're in agreement.

I have for sale the following two weather radios:

-- Radio Shack WeatherAlert desktop radio, CAT #: 12-240
-- Radio Shack portable Weather radio, CAT # 12-242

I'm asking $30 + shipping for the two radios. The desktop radio with the alert is in excellent condition. The portable is is good condition - has scuff marks on the back.

Thanks in advance!

P.S.: Neither of these radio have SAME technology built in...

I am NOT a HAM, I do however, Now have a permit from MSP.
(at the time of the stop Jan 2000. I was unaware of the law.And did not
know I needed a permit.)(Ignorance is NO excuse)

I did not have the opportunity to present any proof of exemption.
(since I did not have any). The officer did not ask for proof either.

Hi Guys!,

Seeing your post prompted me to pull a message from my Trunkcom archive comparing the PRO-92 and BC245 on a busy Motorola system. Scannerdude did a good piece of work and the results speak for themselves! The 92 has problems dealing with these systems!

For Motorola and EDACS, the 245 takes some beating. The 92 has better conventional scanning features including CTCSS and DCS and LTR trunktracking. Depends what you want out of your scanner! I've been very pleased with my 245 which I've had since July 1999. It tracks my busy local system in London, UK like a dream but I own better conventional wideband scanners too (although these don't know what trunktracking IS!)

Since the 92 doesn't come with a computer lead or other accessories, it's also significantly more expensive!

The bottom line is that it depends what systems you have locally. On the evidence I have, a PRO-92 would be a disaster on my busy local Motorola systems but if you need LTR, the 92 is your only handheld option,

Regards,

JohnC.

Bill,

Just be glad you got your Drake back and it worked. Like to share my latest communication with the USPS regarding on going claims and have to agree with the Class Action Advocates.

This is my last hurrah.

Sent last month, hope the address helps someone.

Consumer Advocate,
U.S. Postal Service, Headquarters
475 L'Enfant Plazas SW
Room 5821
Washington, DC 20260-2202

Dear Consumer Advocate:

The attached documents for the most part document my case Article V650285259. I have no great expectations, as I don't believe there is the slightest chance of any real concern for the end user left within the United States Postal Service. For what it is worth, I have before photos of self test screens and witnesses that can attest to the condition of the 1240 immediately prior to shipment. Copies were submitted with claim. It is sad that the biggest singe impediment to the success of a start-up company turns out to be the United States Postal Service.

Ms. Nancy Pleimann
Supervisor, Claims appeal
Claims and Inquiry Section
Postal Data Center
Post Office Box 80141
Saint Louis, MO 63180-9431
Dear Ms. Pleimann:

I am so totally disappointed, upset, and mad with the United States Postal Service that it is difficult to respond to what I see is only so much window dressing for an agency totally out of control that answers to no one when it comes to customer claims. My family business spends over $8,000 a year on just shipping charges. Our first year in business the United States Postal Service destroyed over $600 in merchandise and denied every claim for improper packaging. We learned a hard lesson but learn it well we did. As a growing auction business, we are approaching a 500 positive feedback milestone. Many buyers specifically mention our superior packaging. We learned how to deal with your cavalier attitude regarding handling packages. Now when you dropped our Tektronix 1240 Test System so hard as to damage the internal circuitry

rendering it useless, you deny the claim citing lack of damage to the packaging. Why not be honest and take the money and tell us any claim won't be honored?

Your agency abuses its position and public trust at will to avoid dealing directly with anyone. I cite for example the attached letter of March 8, 2000. The original was sent March 8, 2000 registered return receipt signature required. It, like my claim, remains ignored. Mr. Mixon is there as I called the office and talked to the office clerk who offered to put me through to his voice mail before sending the letter. As of this writing, I have yet to know the status of this letter. Here is just another case of your agency taking my money then doing nothing.

Just preceding the receipt of your letter, my Tektronix 1240 was mysteriously returned to me. I don't know what your agency did to it but I do know you took it apart as you could not get it put back together again. It was returned missing chassis screws, incorrectly seated circuit boards, and sans A.C. power cord and manual, just another service of the United States Postal Service.

Honestly, Ms. Pleimann, I would like to get the meanest, nastiest tort lawyer I can and have my day in court. I cannot believe you can dictate the terms and conditions at will against no measurable or identifiable criteria, take my property, refuse me a receipt, ship it all over the country; take it apart and damage it further beyond repair; return it, and tell me I'm plain out of luck because you are the United States Postal Service and you do what you want.

One totally disappointed and upset Postal Customer,

Thomas E. Scott III

Hola, alguien me puede aclarar algo sobre frecuencias?
A ver, con un scanner que tiene modo AM/FM y WFM, cual es el mas comun
a utilizar, la FM no?
Se puede escuchar a los radioaficionados o no se puede?
Cuales son los rangos de las frecuencias? Me refiero a que la publica
esta sobre la 27 y la 31 no? y el resto por donde oscila?

913. Quick Trunk Tracking Question

Newsgroup: rec.radio.scanner
Date: 2000-07-16 00:00:00 UTC
From: tede911@aol.com
Message-ID: <20000716105026.04220.00000609@ng-fy1.aol.com>
Source record: 84887

Hi all,

I am programming a PRO-92.

When I am programming a set of frequencies in a trunked system, do I need to program a fleet map for EACH frequency in the system?

Example...

Channel 501 - 857.2125 I set it to track in MOT mode and then set the Block/Size

Channel 502 - 858.2125 I set it to track in MOT mode and then set the Block/Size

so on and so on....

* OR *

Do I simply set the block/size info for a bank. In other words, I set it once within a bank and it makes no difference what channel I'm on within that bank when I go into the mode to program the block/size?

And, if the latter is the case, does this mean that I can only scan one system (whether Type I or Type II) within each bank?

Thank for you time,

Please CC my email with your reply

Ted
Boston/MA

Frequency Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

I will go with the" LETS SUE THEM"

I also have had CRAPPY service with UPS. If any one wants to see my pics. of a duplexer that I received around the first of the year, let me know. It came in THREE pieces. It was a DB Products, 4 cans, in a heavy metal cabinet. Can you believe they tore it up !!! Left it on my doorstep while I was away. Did not even leave a note as to whom to contact for damages.

I just went by Fed Ex this morning, and to my surprise, they are now shipping GROUND. They were cheaper than UPS and I have have NEVER had a problem with them.

Of course. It's the American way. Legalized extortion of anyone with assets, courtesy of the trial lawyers.

Like to smoke? Go ahead. Despite the common knowledge that cigarettes will likely KILL you eventually, you can sue the tobacco companies for $145 billion when you develop emphysema or lung cancer.

What a junk society!

Pappy,
You are right I should have said something about that. I do enjoy making a difference. I look at the job like this, it is a ministry, one where God uses me to meet the needs of His people, and I am thankful for the opportunity. My reply was to state a point of view about the job, the point being that it is just a job, nothing more. I dont identify myself by it, no fire department hats or t-shirts off duty, no stickers on my car, my house isnt full of memorabilia. Thats just not me, I leave all of it at the station until next shift.

I fail to see how the government has anything to do with it when a group of wacko parents barricade themselves in a building and set themselves and their children on fire, even if the FBI is outside on the other side of the barricades at the time. If the parents had walked out the door the day the thing begin instead of deluding themselves that a trivial criminal investigation was the harbinger of the Apocalypse, they'd all be free today, their cases tossed out of court and their children safe and sound in their beds.

Adherence to superstition is the only invariably fatal mental illness.

Interesting how you forgot to mention that the children were totally
innocent
and had nothing to do with the situation. Your opinion that the parents were
responsible for the childrens' deaths is only your opinion. How does that
help the kids?

938. What do you do with your OPTO 456, anyhow?

Newsgroup: rec.radio.scanner
Date: 2000-07-17 00:00:00 UTC
From: me@me.me
Message-ID: <397398de.22991033@news.corecomm.net>
Source record: 84712

I got bitten hard by the scanner bug... this was about 4-5 years ago. I got a pro 43, I got my wife a pro 46 when I couldn't get her to give me my 43 back, I got a RS 2006, then I upgraded it to the OPTO 456.

Life has a way of getting in the way of my obsessions, and scanning was no exception. Anyhow, I dragged out the old scanners, with the notion of selling them in mind, but maybe there's something worth doing with 'em besides listing them on Ebay.

Any suggestions?

Attached are the freqs for Sayreville transmitters, as taken from a
PerCon search.

While it doesn't list an "Off Duty Channel", it does give you all
current frequencies.

Hope this helps.

Happy Scanning!!

I use "Bon-Ami" it is available from your local grocery store. It will cost you about $.79 for a lifetime supply. Apply onto a wet cotton cloth or paper towel and rub gently on the display. Rinse with another wet cloth.

It was modified by the dealer (Durham Radio) and it did not void
the warranty. If you're thinking of doing this, forget it -- the
current Radio Shack models cannot be modified. I'm somewhat
confused by your question about the NETSET brand. Most Radio
Shack scanners currently sold in Canada carry the "Radio Shack"
label -- a few carry the "Realistic" label (PRO-2037 and the
PRO-2040 -- old stock?). In the past, *all* Radio Shack scanners
sold in Canada (through Intertan Canada, at least) had the
"Realistic" label. I have never seen anything with the "NETSET"
label.

948. alignment of scanner

Newsgroup: rec.radio.scanner
Date: 2000-07-17 00:00:00 UTC
From: beehunter1@webtv.net
Message-ID: <27226-3973A1BE-19@storefull-126.bryant.webtv.net>
Source record: 84722

I have a Bearcat BC800XLT and a friend of mine told me it should be "aligned" to the 160.000 to 162.000 mhz band as I listen to railroad frequencies mostly. He said they all come pre-aligned to the 155.000 mhz band for police monitoring, which I never listen to. He has an ancient Regency Touch Scanner (lucky him) that he bought in 1975 and had it aligned at the factory in Cumberland Indiana when he bought it. Does anyone know how to do this or where I can send mine to have it done. Thanks for any information on this topic. Also, is this a "dual conversion" or "triple conversion" scanner? I assume it is "dual conversion" as it is about 12 years old.

I fixxed that. Not sure what I was thinking before I wrote that. It's got to be mod'd to even pick them channels up, a regular non mod'd one won't. Was lame on my part. But then again most stuff I do is stupid/lame so its nothing new.

Sorry for the lameness,
Scott

I just did a search for ICOM R10 or ICOM R-10.
There is one page out there that has detailed pictures.
I don't know the exact site.

Low band skip is active with the solar flair activity. Sunday and
Monday, I've monitored other states. Here is what I captured.

42.06 1854 Est. Carassousa? County APB on a guy who tried to
run over a Conservation Officer, license out of KC. 'Christian Cty'

42.38 1855 Est. KAA203; male dispatcher. '10-47 south of 44';
gave time of 1757 to 161. '532, 10-9 1759'

42.6, 42.34, 42.52, 42.54 were others. Monday heard North
Carolina well.

I'm taking a serious look at the pro-94 but I have a few
questions....can you scan multiple trunk systems
(either of the same or different types) at the same time...can you scan
multiple trunk systems and conventional frequencies at
the same time....what is the khz step size?
Your help would be very much appreciated.
Thanks

The BC800XLT is dual conversion and your radio probably does not require
alignment. I recommend you don't adjust it unless you:

1) have a schematic and the proper test equipment, which includes an
FM signal generator with accurately calibrated amplitude and frequency

2) first measure the sensitivity at various frequencies and determine
that it actually requires realignment (unlikely)

You seem to have a lot of blind faith in wackos who try to use their children as human shields. Whatsa matter - you don't like it that the government shows it won't let people get away without paying the price when they use this ploy if agents come for 'em? Wackos got their roles to play in this sort of thing, government's got another. Go ahead and be a dead idiot. Just don't come crying to me about it. You're right that the children didn't have any choice. But their parents did. And they made it.

Thanks for that moment of sanity. The
American system works very well, thank
you, as long as voters are informed and
involved.

Bottom line is, an apathetic and lazy
(or alienated non-voting) electorate
gets exactly the kind of government
they (we) deserve. If you re-elect
immoral and corrupt scoundrels like Bob Barr,
Newt Gingrich, etc., it's no wonder
we're so messed up.

I wonder if this topic drift has to do with the
terrible reception lately?

Anyways,
I don't know where you get the idea the White House
is the majority of the problem. Most every law you
live under came from your local, state, or Federal
legislature.

It puzzles me when people use terms like "Liar in Chief"
as if they think lying or affairs is anything new to
the Oval Office. Get real, folks. Time to leave those
comforting illusions, read Machiavelli, and face the truth
about what sort of person rises to power.

Any historian will tell you there have been far more
corrupt administrations: Grant, definitely. Reagan,
definitely. Kennedy: definitely.

Clinton's a liar. So is GW Bush, and Al Gore.
Take your pick.

NOW we're back on topic. :)

I can think of many independent sources of news,
which are much better IMHO.

See, shortwave radio is relevant here.

Hello,

I'm new to the radio world, and just got a Pro-2020 scanner. I have no manual for this scanner, and I would like to know what is the frequency ranges for this scanner. I would also like to know if I can apply some mods on this scanner.

Thanks a lot,

969. FS: RS Pro-51 Scanner

Newsgroup: rec.radio.scanner
Date: 2000-07-17 00:00:00 UTC
From: curbdoc1@aol.com
Message-ID: <20000716222525.17159.00000600@ng-cd1.aol.com>
Source record: 84806

I have bought a new Pro-91 and wish to sell my old scanner. The Pro-51 is a 200 channel 800mhz direct entry scanner. It works fine and cosmetically I would grade it a 7-8. No corrosion in the battery compartment and no dings from being dropped.
It is a model # 20-308, ser # 4590xxxx, and "1 1 A 3" is on a plate under the belt clip on back. It has a short "rubber ducky" style antenna. I will sell the scanner for $110 and that includes the insured shipping. I have a few feedbacks on eBay for items I have bought over the internet. Payment can be made by USPS money order or I have a PayPal account to accept a credit card payment. If you're interested please email me "curbdoc1@aol.com" Thank you, Ted

If you sell it to someone who doesn't know how SLOW it scans, over $100
but for $100 lately even on ebay you can get pro 37's that scan much faster,
and since you are trying to search the cell bands, cause that is about all
it is good at, searching at 50 frequencies per second on the pro 37 or pro
43 is like day and night when you have over 800 frequencies to search. Just
my humble opinion, I have no idea what a scanner is or does.

Just recently I heard that the state patrol in Iowa where I live at was going digital and that they are still going to use the same frequencies numbers as before, and I was wondering if I will still be able to hear them? I have been away from scanning for a year and a half and I am now getting back into it, so I am out of the loop on all the new technology that the state agencies are now using, I have also notice that when I listen to weather info. on my scanner it sounds computer generated would that be digital that I am hearing? I would appreciate any info to get me back up to speed. thanks.

How did YOU get informed, Bill ? You've spoken in a lot of
generalities here. How about some specifics? What exactly was this
abuse you witnessed? If it was by local gov't flunkies, then what was
the reaction of the state Attorney General's office when you informed
them? If the local newspaper's not in cahoots with county gov't why
not try approaching them. Do lots of other citizens feel the same in your
county? Try standing up at the county board of supervisors meeting and
calling these guys out. Bad men always fear exposure. Etc, etc, etc.
Come on, Bill. You already know this.

It's my experience that there's a certain sort of person who's always
belligerent, surly, and obnoxious towards authority figures, who usually
finds a way to provoke them and get into trouble, and who therefore
accumulates a litany of stories about how he's being oppressed by "the
man",
whomever that turns out to be -- government, police, or whatever.

For example, there are the delusional Posse Comitatus folks, who won't
register their vehicles or pay taxes, and have the audacity to call
enforcement
action against them "persecution," as if they alone deserve to opt out
of their civil duties. Or the crazies who get directly in the face of
people
trying to get into a Family Planning Clinic and try to intimidate them
into
leaving. It's stupid they should think
we (society) would allow that to happen without consequences, and we
don't.

Venture a guess: 90% of such complainers did a lot to create their own problems.

If you look around the world, comparing this Government to (Any group of
other governments)
- This one aint too bad!

986. Speedtrap Registry - Remove my link, please!

Newsgroup: rec.radio.scanner
Date: 2000-07-17 00:00:00 UTC
From: "Todd L. Sherman/KB4MHH" <afn09444@afn.org>
Message-ID: <8kupa4$r2g4$1@spnode25.nerdc.ufl.edu>
Source record: 84823

I've had it with all the "thank you Speedtrap" notes sent me from people who think that my _Mobile Scanner & RADAR-Detector Laws_ web page is the work of The Speedtrap Registry. It is not the fault of the visitors to my site, though. It is the fault of The Speedtrap Registry for refusing -- for five+ years -- to acknowledge my request that they correct the link back to me so that people understood that my work was _my own_ and not thier's.
I am therefore removing all links to them, and have requested they remove that _thing_ they call a "link" to me. See attached, below.

BE ADVISED then, that if you've been getting to my site from the Speedtrap Registry, my link will soon be removed from there, per my own request. So you will need to provide a direct link to my site, or your users will no longer be able to reach it; and/or add a link to your "Favorites" folder in your browser.

This is gonna cost me many hits, and I'm sure I'm gonna lose my current high average counts, but I have to put my foot down and do something, here. I'm willing to sacrifice them for the point of this. Besides, I'm sure they'll slowly creep back up there again when people realize that they suddenly can't find me and go a searching and people start adding _direct_ links to me, rather than going through Speedtrap.

Todd

From: Todd Sherman/KB4MHH
To: The Speedtrap Registry
Subject: Scanner & RADAR-Detector Laws In The U.S. link
Date: Sunday, July 16, 2000

To Whom Concerned at [The SpeedTrap Registry]:

You know what? Go ahead and remove the link to me, please. I think I'm doing okay on my own with 7500 hits a month, thank you.

I'm tired of the five years worth of pleading with you to give proper link credits. For five years now, I've given the FREE link back to you as "SpeedTrap.com - by Andrew Warner", WITH a full description, PLUS that fancy little animated web graphic with the rotating flasher light. I did that because I'm a courteous type of person, and I think about the other guy.
But for five years, all I've got are nasty e-mails meant for SpeedTrap.com from people who think my site is part of your's, because you refuse to make that clear to them in the link -- i.e., they think my work is a sub-part of your's because you chose to go the route of "generic names." (Forget descriptions.)

My site is not called "Scanner Laws." It is much more than that. And it is not made by a company, but an individual.

For five years, I've pleaded, and been ignored. For the next five, I think I'll try it on my own, based just on my name alone.

That five year old, un-updated list of laws made by someone _else_ got proper credit; but my hard work at the law library just got a generic title for the longest time of "Another scanner laws by state." If you need a replacement link, I think that list is still out there somewhere. But, the user is hard to find. Good luck. Still, I think it should do for you guys. Either that, or you can hire a lawyer and have him sit in a law library for days and some-odd hours and do the research for yourself every year just like I do.

Meanwhile, I'll take my chances that the rest will come to me looking for my hard work and good name.

Besides, I don't think my so-very-long web page title would fit all too well on your fancy new web page design format. You know..."Mobile Scanner & RADAR-Detector Laws In The U.S."

So, thanks but, just remove me; and I'll go ahead and remove the links back to you, as well.

I gave you free advertising for five years. I guess now you've progressed to the point that you don't need the possible additional 7500 hits a month from my site, either.

For future reference though, it is considered polite protocol to list the full and proper name of the site you are linking to, as well as to mention the name of the author, so that people do not confuse any work someone else did with your work. You'll make more web authors happy that way. And when they send you e-mails, it is also considered polite protocol to answer right away, and then to accomodate. You fulfilled Part-1; but you forgot Part-2, with me.
You need a new policy regarding handling of your links to others, I think. I hope in the future you'll treat other webmasters differently so that you don't offend them as you have me.

Sorry, but I'm past tired of it, now. I think 5 years (actually, closer to 6 now) is plenty of time to allow for someone to react. And after e-mail after e-mail being ignored in all that time, I think I was more than patient. You have no excuse around this.

Thanks for all the respect, and for all those immediate responses over the years...

Nothing is currently available on the market for digital reception that i'm aware of Jim. If you believe any of the rumors in the air about that kind of receiver, sounds like some might be in the works by the time your p.d. gets on line. Its only mere speculation, but its something to hang on to !!!

>house...the White House that is!

I don't think that cleaning out the White House, attractive as it is for other reasons, will be that great a remedy. This is larger than partisan politics. The Ruby Ridge affair was purely a child of the Bush Administration, The Waco incident happened when administrations were changing and the Elian thing purely belongs to the Clinton Administration. What's common to all three is the notion that Big Government can't leave people, particularly those out of the mailstream, alone. Look for this to increase...

> Poorly equipped, even more poorly supplied Continental Army held off the >best the Brits could supply. The advantage of home turf and determination >made the difference.
My wife is a history buff. Majored in history with special attention to military issues.
The English were occupied in Europe and never really brought the force that they could have to "subdue" us. They only had X number of troops, Y number of transport ships, and just did not think we were worth it, or that they could not correct the condition later. She also pointed out, and her brother in law, a West Pointer, agreed that we did not so much as win, as they lost. Our peasant troops where at least as likley to run as to fight. I am not saying our guys where cowards, but it is hard to fight organised troops, firing from formation in batteries with a small number of poorly trained and equiped troops. I used to laugh at the way the British troops lined up. But after they [my wife and BIL] explained how it actually worked, their tactics where pretty good. By concentrating your men, you could maintian control and focus fairly powerfull fire on your enemy. And given that even today, with very accurate weapons very few shots "connect" with the tartget, it was not nearly as insane as it looks.
You might want to take a look at James Burkes "Connections" PBS video series. Most public library have it and it has some very good detail on the how and why armies did what they did.

Yes, you and she are correct. But you underscore my point.
Colonial determination was underestimated by the Brits. And their
best, even though under deployed, fell.

> She also pointed out, and her brother
> in law, a West Pointer, agreed that we did not so much as win, as they lost.

I've heard this before, applied to seminal battles in the world
wars. But again, determination of a few made the difference.

If the government in this country made a full scale assault on the
American people, victory on either side is far from assured. The
military, fighting citizens on American soil, would also be
underdeployed. It's not likely they'd lay waste huge tracts of
American land as we did in Vietnam. In that alone, advantages for
the citizens, would lie. Granted they'd have to be exploited to
maximum, but there would be advantages.

> Our peasant troops where at least as likley to run as to fight. I am not
> saying our guys where cowards, but it is hard to fight organised troops,
> firing from formation in batteries with a small number of poorly trained and
> equiped troops.

Absolutely. Running before superior advantage was solid tactic,
waiting till solid advantage was available was smart. But you're
making my point for me. A direct assault was not effective against
the Brits, but guerilla tactics were. Determination of a few.

> I used to laugh at the way the British troops lined up. But

I loved that show. And I have the series.

Being poorly equipped, and being out gunned, the Colonists made up
for their shortcomings in ways the Brits underestimated. Again,
determination prevailed. Which was my point.

998. FS: Scanner/Radio Gear

Newsgroup: rec.radio.scanner
Date: 2000-07-17 00:00:00 UTC
From: oldgear@aol.com
Message-ID: <20000717113354.22667.00000669@ng-fy1.aol.com>
Source record: 84835

All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address.
Thanks

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation. I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

Often this is deliberate because the least common denominator of
white-knuckled airline tourist doesn't want to hear about anything
being wrong with the aircraft.

>By the way, I hope the persons on the ground for 8 hours waiting
>to get off the plane (I don't remember the details) win their lawsuit.
>I know what it feels like to be a prisoner of the airlines.

Yeah, eight hours is quite excessive. I would think that if they
can't get things right after 1 hour, that everyone ought to be offered
the opportunity to walk away.

And they ask me why I pilot my own airplane...

Get some Novus, Meguars, or Blue Magic plastic polish. They all are marked
as being able to polish out fine scratches.

Failing that, the "fine cut" paint polishes sold in auto stores, for
removing swirl marks and fine scratches on clear coat finishes will be a
good substitute.

Finally, any fine metal polish (as sold for polishing soft metals like
aluminum mag wheels) - Blue Magic, Meguiars, Mother's, Eagle One, Flitz,
Wenol, Nevr Dull, Happich Simichrome, etc - will do the job.

Be careful about recommendations for using toothpaste or more coarse
abrasives like Brasso and Noxon. These may take out the scratches but
leave the surface less than optically clear, as they tend to use harder
and more coarse abrasive particles.

For years before they started using the 500 MHZ trunk system Sayreville has used what they refer to as the "Off Duty Channel". Their old dispatch frequency used to be 460.250 and I assume it is somewhere near this frequency. The frequency is not listed in Scanner master or Per conn database unless it's listed in a newer version. Does anyone out there know this frequency ? your help is appreciated.

>The Waco tragedy really bothers me. Those children didn't have to die.
>Even if the adults were guilty of all they were accused of, the children
>didn't have to die. What kind of government do we have?

Now here is a classic example of why the SW stations in the USA sound
as outlandish as they do.

Bill's concerns are not misplaced. I agree, these are concerns.
However, there are ways within the system of addressing these
concerns.

And as far as the Waco case, let's get one fact straight here: Yes,
the ATF was being big and bad when they tried to take down a place in
Jackbooted thug style. However, we should not forget that the Branch
Davidians had harassed and threatened many neighbors and even local
officials. They were not the kind of neighbors I would have wanted.
And finally, they did not have to fire one shot at the ATF. THEY KNEW
THE ATF WAS COMING! The use of excessive force could have easily
become a federal case just as it has in Philadelphia.

So, yes, the use of force against the Branch Davidians was excessive.
However, in my opinion, given the reports I've read, it was within the
bounds of several (very) poor judgement calls.

I want to reiterate: All cops will use excessive force. They will do
so at almost every opportunity unless they have the fear of
prosecution hanging over their heads. Further, the sorts of folks who
often join law enforcement organizations aren't usually model examples
of intelligence and independent thinking. It's really too much to
expect them to be both regimented and smart at the same time.

And while no police brutality is "acceptable," no crime is really
"acceptable," either. What we need is to ensure that those who cross
that line are prosecuted. That's all we can do as a society. If we

throw off the "gumint" and descend in to anarchy, will we really be any better off for it?

Yes, I believe in personal responsibility. Yes, I believe in rights. Somewhere in the middle of this is a very fine line that we try to make laws with. It is an imperfect system. It always will be an imperfect system. Welcome to real life.

But back to SWL: Bill's post is a moderate opinion in this news group. The real right wingers are so right, they're almost left. Folks, these are the listeners. Is it any wonder that SW sounds like it does?

After spending about two years in a drawer I brought out my RS 2006 which is modifiedI to an Opto 456. Everything seems to work fine, except the memory was cleared, and I get a LO BAT alarm, which is very annoying. The opto 456 modification required me to remove the 9volt battery connection, but the alarm was never a problem in the past, so I'm assuming that there's annother internal battery in there someplace. Can somebody please shed some light on this problem for me?

Fairbanks, AK

The Waco event also symbolized something about the
present state of the Constitution: instead of the
balance of power, we live under a de facto executive
dictatorship. The White House never felt the need to
ask permission of the Congress before it undertook
the raid, and the Congress never raised a serious
challenge to the White Houseï¿½s assertion of complete
sovereignty. Our elected representatives provided the

illusion of participatory government, while Reno and various anonymous and unelected underlings held the reins of government in reality.

Ignore the local media. Obviously you have access to the Internet.

Rapid Media can help citizens to know what certain government services are doing on a moment-to-moment basis. It will not be terribly useful for informing oneself sufficiently to cast a meaningful vote in a national election, but it's a start.....

So tell me how they got inside and back out again to shoot the kids at close range after the fire started. And all without anyone noticing. I'd be really worried about messing around with the Feds if they have those sorts of supernatural powers.

>If the FEDS
> didn't have so many employees there would be a much greater outcry.
I doubt it. I'm not a government employee and I still don't see that the Feds did too much wrong. As far as I'm concerned, the only thing they might have done wrong was to let those wackos sit for too long berfore they stormed the place. And afterward, stupid right-wing Republicans wanting to score quick political points gave other wackos the idea that if it happened again, they'd give 'em a get out of jail free card. Just hold up your kids as shields, guys. What crap. The I guess us law 'n' order types are just outa fashion these days with the radical right.

>I mean

I know you are too lame and inept to search DejaNews for confirmation
and proof (it's there for the reading), so here is the list of your
lies to remind you. The twenty seventh lie is the one I just caught
you in. I think I'll add your above lie as number 28.

Toilet Boy, you're still a liar and a fraud.

1. I proved you lied about the first date of your appearance on the
Internet.

2. I proved you lied when you denied making the claim about
patronizing under age child prostitutes.

3. I proved you lied when you claimed to have written "several
technical articles" for the ARRL and other technical publications.

4. I proved you lied when you claimed to have adopted your dead
sister's children.

5. I proved you lied when in the span of two weeks you claim to
be married in one forum and single in another.

6. I proved you lied about having college degrees.

7. I proved you lied when you denied you were identified as a
known Internet abuser by Joe Greco on his published lists of
spammers and idiots.

8. I proved you lied when you claimed you weren't stealing
Internet access and your employer terminated you for theft
of services.

9. I proved you lied you claimed you've never used fictitious
or illegal Internet address.

10. I proved you lied when you claimed you were not the most
prolific poster of off topic messages.

11. I proved you lied when you said WD-40 was unsuitable for electronic use by posting another endorsement from Roy Lewallen, w7el@teleport.com, which you ignored.

12. I proved you lied about your place of employment when I posted your work telephone and related data. I also proved that *you* worked at that office and not your retired father.

13. I proved you lied when you claimed that Bill Cheek had never been a member of Mensa.

14. It's been proved by others that you lied when you claimed to have never lost an ISP for your forged cancels.

15. It's been proven by others that you lied when you denied using numerous fake identities on the Internet.

16. It's been proven by others that you lied when you denied you've never blown up a repeater system through your incompetence and total lack of technical expertise.

17. It's been proven by others that you lied when you denied trying to break into other computer systems using Back Orifice.

18. It's been proven by others that you lied when you claimed you had "acquired MORE FCC licenses ... than could be counted on one hand!"

19. It's been proven by others that you lied when you claimed you have made your "lioving from the Radio Communicatoins Field for most of the last15 years."

20. It's been proven by others that you lied when you denied having stalked Bill Cheek for over three years.

21. It's been proven by others that you lied when you denied being kicked off Fidonet by Bill Cheek.

22. It's been proven by others that you lied when you claimed Bill Cheek had been kicked off of Fidonet.

23. It's been proven by others that you lied when you claimed a police had been filed supposedly about harassing phone calls made to you at your place of work.

24. It's been proven by others that you've emailed death threats to your detractors on the Internet.

25. It's been proved by others that you lied when you claimed to "have helped resolve" the problems of the scanner newsgroups and have "rid this NG of trouble makers."

26. It's been proven by others that you lied when you denied sending bogus complaints using aliases to the Internet providers of your detractors.

<wa7twi@primenet.com> who is the author of the original version of this

story. It was first posted on October 30, 1996 in alt.radio.scanner and
rec.radio.scanner.

"All Hail King Mackey The Great Liar"

Behold brothers and sisters, I bring you the profound story
of how King Mackey the Great became so. It is an exciting
tale filled with wonder, awe, and heroic deeds. Come closer,
as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was
plagued with a terrible injustice. The evil mercenary force
from Capacitor held the people of Smoke prisoner. Repeater,
the ruler in exile of Power Supply, offered a rare and unused
Radio Shack battery card to anyone who could free the people
of Smoke from their Capacitor prison. A young and fearless
warrior stepped forward to take up the gauntlet. Repeater
told him of the dangers but the young man was undaunted and
resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the
fearsome guardians, Positive and Negative. So terrible were
these mighty sentinels that even the renowned guardian Cerebus
trembled when faced with Positive and Negative. Armed with
his trusty screwdriver he didst battle with them. In the hands
of a true warrior the screwdriver is no common weapon. Our
hero, battle tested and proven in the labs and urinals of
Technical School, was much more than a professional. He was
a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded
razor sharp quartertwenty threads. Again and again, using
every feint, lunge, and parry the guardians had learned in
centuries of defending the cabinet, but to no avail. Mackey
maneuvered himself and with one swift strike, he ended it. He
had touched both guardians in the only way to kill them. He
bridged the gap between them in a move only a Master Bladesman
could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the
Smoke from their electrolytic bondage. Afterward, the Smoke
rewarded Mackey with their highest honor, the Diddler of the
Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay seige to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repeled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybodys kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great Liar.

WHERE, oh where, do you get this idea from?

So, E-bay goes overboard and confuses scanners
with shortwave radios. How exactly is that the
same as a government conspiracy to deprive its
citizens of news????

This thread has been steadily descending into
ridiculousness and lunacy.

Hello,

Can anybody help me with information about an old Bearcat UHF scanner?
It is model "BC-ONE-FOUR U" and has 4 crystal controlled frequencies.
The crystals I have are marked "131", "132", and "154.810".
What I'd like to know is what is the frequency range of the scanner
and how do I figure out what frequency is being received or, conversely,
what crystal to use to receive a particular frequency.

Any information is appreciated.

Thanks, Don

This thread has been steadily descending into lunacy.

E-bay is private, entitled to sell or not sell items as they choose.
Banned items cannot sue E-bay for damages or discrimination.
If E-bay decides tomorrow that Beanie Babies will not be
auctioned on their site, (as far as I know), it's perfectly
within their rights to pull them. It's also perfectly within your
rights
to complain about it to them if you wish.

The real story seems to be that E-bay was pulling
merchandise from a particular seller for some infraction,
not imposing a blanket ban on SWL receivers.

At any rate, there's no government confiscation of SWL radio
at work here. I swear, some people can see a conspiracy in
the cloud patterns or configuration of stars in the night sky.

What are the PL tones and frequencies (e.g. transmit PL & freq. and receive PL & freq.) for Orange County's (CA) EMS services (base hospital to paramedic unit radios)?

Thanks.

1023. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.scanner
Date: 2000-07-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8l11sm$h1b$1@news.hawaii.edu>
Source record: 84654
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Source record: 84657

Incorrect. The City of Bloomington, MN utilizes an analog (not digital as stated below) EDACS systems. The BC895 will not track the system, but the current scanners that will do EDACS (BC245, PRO-92 etc) will do a very good job. Bloomington has their talkgroups setup quite well and they are easy to monitor.

Well, I'm new to this group but familiar enough to say it probably recieves 406 to 512 mhz frequencies, that is the UHF band. Some older ones though only received 440 to 512 mhz frequencies. I don't know the exaxt specs on that model, but I'm sure it's one of the two. The "-U" on the end of the model number designates it as UHF. I know the 154.??? crystal you mentioned shouldn't pick uin that scanner. I don't know about the others.

To answer the question, by using appropriate software (Probe, etc.)
you would create an unlimited ability to scan available frequencies.
You could combine various types of transmissions to only be activated
if a particular frequency transmits. You could know where the
transmitter was and who the licensee is. You could decode dtmf
characters.

All that and more if you have the time to do it. If not, the radio and
the board if in good condition IMHO is worth more than the $450 that
someone else mentioned. Go to ebay and do a search on the 2006 and an
Opto board (if available). Then watch the auctions for awhile. You'll
get a feel for the appropriate price.

Good luck!

If you have a better idea, then by all means try it. However, I would try talking it up first, just as the founding fathers of the thirteen colonies did over 200 years ago, before taking up arms.

>>make laws with. It is an imperfect system. It always will be an
>>imperfect system. Welcome to real life.
>
>I think that is what they call fatalism.

I'm not suggesting fatalism. You are. I'm suggesting practicality. In other words, fight the battles that are worth fighting. No, our government is far from perfect. Yes, injustices will be perpetrated. But tear it down? Only if you have some way of building it better. The founding fathers decided that a remote monarchy was not a good way to run things. They had a better idea.

WHERE IS YOURS?

The very least you should get is a 900MHz Digital phone. There
are many out there for very reasonable prices. Of course, there
are bigger and better features, but the price follows the
features.

I'm looking at a Panasonic KX-TC1870 B 900 MHz GigaRange&#65533; with Digital
Answering System $128.99

Would this fit the privacy requirements? It says that it has digital spread
spectrum. I don't know about scrambling.

I purchased a Panasonic KX-TGM240B and found that it is indeed spread spectrum but NOT DIGITAL. I could monitor the phone very easily over a broad range of 900mhz freqs. Needless to say the phone was quickly sold. I now have a Uniden 2.4gig model. Since only a couple of scanners hit 2.4 I feel pretty safe.

Any discussion of global domination is still left to my hardwired phones.

I have a BC 220XLT, which is powered by a BP-120 (4.8V rechargeable NiCd). Does anyone know of a battery holder whereby I can use regular alkaline batteries in a pinch?

The NiCd's are 1.2V each, so I guess we're talking about three regular alkalines at 1.5 each plus the holder to cram into that small space.

Thanks,

Paul, KC2FNC

When when you look at gate agents, they often use walkie talkies to communicate with others (probably ramp rats and the crew on the plane). What frequencies would those be, and how are they assigned ? Would there be one frequency/channel per gate per airline at one airport ? Or do airlines get given a number of channels thay can use as they wish across a nation ?

And when a plane travels to a foreign country how is that handled ? Do they re-use the same frquencies for ground handling ?

> > general airline employees talking in the air bands.

Depends. Ramp employees do have access to the air band since that's where
operations is. And the ramp employees do need access to ground control
when empty aircraft are being towed(aka "tugged").

> When when you look at gate agents, they often use walkie talkies to
> communicate with others (probably ramp rats and the crew on the plane). What
> frequencies would those be, and how are they assigned ?

Gate agents and most ground ops use business frequencies at low power (5
watts) primarily between 460 and 461mHz and also in the 800 and 900mHz
business bands. They don't typically require direct communication with
the flight crew since the aircraft is right there at the gate. Otherwise
the crew communicates over the airlines assigned operations freq (129-
132mHz) with the operations office (or FBO, etc.).

> Would there be one frequency/channel per gate per airline at one airport ? Or do airlines
get
> given a number of channels thay can use as they wish across a nation ?

Some airlines have several: one freq for maintenance, one for ramp, one
for operations; some make do with one freq for all needs. Depends on the
scope of that carrier's operations at that station.

> And when a plane travels to a foreign country how is that handled ? Do they
> re-use the same frquencies for ground handling ?

Same bands, but possibly and likely different freqs.

I'd forgotten about BonAmi - I know it works real well cleaning
car-wash spray wax from a windshield so water sheets off... Before
using it, I'd definitely check out how it works on something less
valuable than a display window. Maybe try a food container made from
clear plastic with a similar finish first?
By the way, I've used car wax/polish applied _carefully_ on some cheap
sunglasses with fairly good results.

I did. Right after I wrote that, my brain finally "got a clue" and there was this voice that said "DUH! ...ABCNews.Com, stupid!" 8^) I went there and found the info.

Meanwhile, I'm temporarily adding a new section called "Mobile Cell Phone Restrictions" at http://www.afn.org/~afn09444/scanlaws/cellphn4.html. I'll probably add the actual text of the laws if I can find them but for now, I _do_ have a list of online statutes for most states on my Links/Resources page, which people can in the meantime use to look them up themselves, if they wish.

Thanks, Doug.

Take care,

Todd

Steve H (sjhouse.foilspam@hotmail.com) on 17 Jul 2000 14:51:03 -0500 wrote:
>I fail to see how the government has anything to do with it when a group of

The government showed up with over 50 armed, armoured, jack booted
individuals who positioned themselves as if conducting an assault.

The people in the compound had been warned the government assault was
on the way to arrest at least some adults and confiscate the children.

If you knew your local law enforcement had investigated and cleared you
of any wrong doing on the alleged charges (they had), but still this
force gathered outside, would you really have walked out and given up
your children to them for brainwashing? Not if you loved your children.

>wacko parents barricade themselves in a building and set themselves and
>their children on fire, even if the FBI is outside on the other side of the

The court testimony says otherwise.

Many members of the government forces tried to prevent the final tank
assault, and were making progress "talking out" Koresh, but the
powers-that-be decided to make an example out of those who dared resist
the government. Guess you are sufficiently cowed.

Nope. Bloomington uses a digital system. The city officials decided they didn't want their taxpaying citizens to be able to monitor the activities of their municipality. To that end, they spent several millions of dollars of said taxpaying citizens' monies to ensure no monitoring could take place. Hence, the digital system which is now in place.

1073. FS : MHS-C806 battery charger

Source record: 84745

Donald wrote in message ...
>Why, WHY did you feel the need to post this drivel here??????
>
>Jesus.........

Don, et al,

Try to _help me out_, here. Okay? Pretend it's your _own_ site that people are mistaking for someone else's work, and that _you're_ the one who was getting all the "thank you, Speedtrap!" type notes for five straight years, and that _Speedtrap_ is getting all the laurels and attention and rave for _your_ work. Pretend now that they also ignored _your_ pleas to correct the link to you for five years straight, too. What methods would _you_ resort to, to get thier attention?
At the same time, how would _you_ alert your users that your site will no longer be referenced there, if they go there to find you, and if you want them to still be able to find you?

I tried to be kind and patient for SO long. I'm too tired of dealing with it now. It is hoped that this will at least spark some action on Speedtrap's part...by removing thier link to me altogether as I requested. I don't want thier kind of "publicity" anymore. It doesn't help me, obviously. It in fact hurts me, because the attention for all my hard work is bounced to them. I worked _hard_ on my site, going to the law library once a year and sitting all those long hours, searching, photocopying, then going back home and retranscribing for the benefit of others. (It's a long way from the thousands of books on the second level to the working photocopiers on the first level.) They didn't do all that work. *I* did. But yet, people THINK they did all the work for some reason.

Wouldn't that get you upset? What would you do?

I'm not mad at the people who write me those thank you's. It's not thier fault. They don't know. Speedtrap has a vague link. And they just follow along the obvious implier. I explain it, and I thank them for what they meant. But I'm _so_ sick of having to repeatedly explain who the real author is...over and over like that. God!

So I've removed my links to them, and requested that they remove that "generic" link to me - the one that so easily confuses people who the real author is. You probably would, too.

Anyway...I'd appreciate your help by not giving Speedtrap any MORE reason to just hold thier bellies and wave thier hands and laugh at me, as they're probably doing now that you've responded that way - especially with it

being the very FIRST response.

But just try to help me here, and next time, if it happens to _you_, I'll be right there standing next to you when _you_ need the same kind of help. Okay? Thanks.

To everyone else, I _would_ like to know if any other sites out there have had the same problem with them. Has anyone else got messages from users who think that your site also belongs to Speedtrap? Please contact me, if so.

Thanks,

Todd

(Author of what used to be that "other scan laws by state" site at Speedtrap, now just "scanner laws," as Speedtrap currently calls it - so that it fits within thier new, huge logo taking up half of the right side of the page, there.)

Mobile Scanner & RADAR-Detector Laws In The U.S.
by Todd L. Sherman / KB4MHH
http://www.afn.org/~afn09444/scanlaws/

- The FULL TEXT - not just a list - of the actual scanner and RADAR-detector laws (for those states which have such restrictive laws). I go to the law library and update these on a yearly basis. Always current. All in one place, so you don't have to spend hours trying to find them individually, piece by piece, using multiple search engines. I did the work for you, instead. Available to you for free, for your convenience.

1075. FS : Alinco DJ-V5T dual band HT - Brand new!

I am selling an Alinco DJ-V5T dual band HT. This radio is about 2 weeks new, in box with manual and all accessories. Used for about 1 hourt ops. For personal reasons, I have decided to put amateur radio on the back burner for a while and concentrate on scanner and SWL. This radio has been professionally modified for out of band RX and TX. it also includes the custom Alinco case, and the EDC-16B filtered cigar lighter plug. I will proivde receipt to verify above claim of age, and the warranty card is blank. If you have specific questions on the radio, or require a photo, please send me an E-mail.

$225.00 shipped via USPS Priority Mail, insured. I prefer shipping to U.S. lower 48 only. Pre-paid using a US Postal Money Order or VISA / MASTERCARD through PAYPAL, and it will be shipped immediately upon receipt of payment.

You can check my Ebay feedback, my user name there is OFFDAN. I have been buying and selling on these groups for years.

Please E-MAIL only if interested, do not reply to the group. NO TRADES...

From: dsteuber@my-deja.com
Message-ID: <8l39fntbk1@nnrp1.deja.com>
Source record: 84611

Hi,

Sorry to drop in out of the blue. I'm looking for recomendations on handheld scanners that can track police and other emergency frequencies. I want handheld because I plan to carry it about I also expect to use it in a car. The following site sells scanners and lists a model that seems to be at the top of my price range:

http://www.bills2way.com/equip/scanners.html

The model in question is the Uniden BC245XLT. This will be my first scanner. Or at least whatever scanner I get will be my first. I understand that the ``Trunk Tracking'' feature allows following police transmissions when they jump frequency. This is a feature that I want.

I live in the Philadelphia area and the Republican National Convention is comming to town soon. I will want to be proficient in the use of a scanner by then. I would like to get a scanner as soon as possible. I also want the best for my dollar that has the features I want.

Thanks for any input.

PS. If you feel you must copy me on the reply, please send the e-mail copy to mailto:nospam@david-steuber.com. I will be looking for responses here in the next few days.

PPS. Any feedback or recomendations on good mail order outfits for scanners would also be appreciated. That includes any feedback on Bills2way.com.

Thanks thanks.

Source record: 84613

I have yet to experience the 245,but have a 235 and it's great and easy to use.My newest scanner is the Radio Shack Pro-94 and I love it tracks EDACS and Motorola type trunking systems and any band of those systems.On the convetional side of things it has 1000 channels plenty for any area I think.Again easy to use scanner.Find out first if they have trunked radio systems in your area to find out if you REALLY need this feature.If not you could buy an older less expensive,and more simple scanner to get started with,I just hate to see you get discouraged about the hobby if your overwehlmed with "bells and whistles" you could have done without.Good luck and have fun.

1092. UBC9000XLT

>Can you back up that statement with facts?? I think that the Pro92 is a much
>better scanner (with 500 channels no less) that does multi-trunking with
>ease, and right now it's only $249..

The computer control features of the 245XLT are complete, while the pro92's are
somewhat lacking: only up/downloading of freqs.

Message-ID: <Vrfd5.16352$MS3.301565@news1.online.no>
Source record: 84618

Hello,

My CAMNIS HSC-050 does not scan or search on frequencies above appx 329.6MHz ...hmmm, why not ?? I have tried to reset the cpu the "easy way" (keylock-power on, bank-1-ENT, power off) but that doesn't seem to help at all... This is actually a new radio that was replaced with another faulty one that made a lot of feedback/self-interference on a lot of frequencies.

Does anyone have any ideas..??

Thanks,

FX

>Johnson, and EDACS (GE/Ericsson)systems.

The reason the PRO-92 is so cheap is because RadioShack acknowledged
the many bugs and flaws with the radio and are trying to dump them as
fast as they can. Even at this $249 price they are still sitting on the
shelves and not moving. Talk to any radio shops and they will verify
this. The price may even fall further just so they can get rid of them.
Go buy a Bearcat 245XLT....

The CHP aircraft use the Blue up SR101 all the way into the bay area.
I monitored 45.120 for over 12 years and have never heard a peep in
Norcal.

If you have 2 details working...say on interstate 10 in Ontario and
another on 101 in Golita...
the chances are pretty good both aircraft could hear each other and that
could just lead to confusion.

So they use 42.340 in the central and north part of the state...and
45.120 in the south part.
I don't know what they use in the central valley...I try not to go
there.

I built my own low band VHF scanner antenna by modifying a fiberglass CB whip. I simply added another identical whip to make a nice low-V dipole. All that consisted of was taking a mobile CB mount, connecting one whip like normal, and drilling a hole for the other whip. One side to the center conductor of the coax, the other side to the shield. Quick, easy, & worked like a dream. Oh yeah, the cost was pretty low, too, probably around $40 for all the parts from your local friendly Ripoff Shack.

Or, if you didn't want to do that, you could simply use or modify any CB antenna.

Hello,
I personally own the BC-3000XLT and the PRO-26 because I like the full general coverage. I program all my "trunk" frequencies into one bank and "hyperscan" it. If you want a good "trunktracker" scanner, I have heard a lot of good reports on the Bearcat BC-245XLT and the Radio Shack PRO-94, but have never owned them.
Bills Two Way is a very good company to deal with, as I have personally dealt with them. Another good scanner company is Scanner World, USA at http://www.scannerworld.com
You can also check out Uniden's home page for specials and closeouts on Bearcat scanners at: http://www.uniden.com/docs/store/
Some good scanner sites:
http://w5gb.nmsu.edu/kc5kto/
http://www.oz.net/~gmcavoy/sw_scanr.html
Rich Wells also has an excellent scanning site but I do not have the address handy...

This package has been sold...thanks to all who replied.

Dan

I am selling an Alinco DJ-V5T dual band HT. This radio is about 2 weeks new, in box with manual and all accessories. Used for about 1 hourt ops. For personal reasons, I have decided to put amateur radio on the back burner for a while and concentrate on scanner and SWL. This radio has been professionally modified for out of band RX and TX. it also includes the custom Alinco case, and the EDC-16B filtered cigar lighter plug. I will proivde receipt to verify above claim of age, and the warranty card is blank. If you have specific questions on the radio, or require a photo, please send me an E-mail.

$225.00 shipped via USPS Priority Mail, insured. I prefer shipping to U.S. lower 48 only. Pre-paid using a US Postal Money Order or VISA / MASTERCARD through PAYPAL, and it will be shipped immediately upon receipt of payment.

You can check my Ebay feedback, my user name there is OFFDAN. I have been buying and selling on these groups for years.

Please E-MAIL only if interested, do not reply to the group. NO TRADES...

Dan

If you have a antenna attached to the radio like a rubber duck
then you need to get a better antenna. If your mobile home is
all metal then you need to put a antenna near the window or
outside. Radio Shack sells a antenna that uses suction cups for
attaching a antenna to a car window, your best bet is to
buy one of these and put the antenna on a window in a room.

If the government made Bill's last days miserable, then the government sucks and should reconsider its stupid laws.
Hey Government, lay off us and force people to encrypt their information if they don't want it being listened to. Stop picking on us! There should be no laws at all on reception, only transmission.
This places the responsibility on the sender if he doesn't want his communication to be understood, not us.

I'm glad you were able to find the web page. I had a Netscape crash and
lost all my bookmarks. I did this mod a little over a year ago. I had
the R-10 for about a year before that. The mod worked just fine it
unblocked the cellular band, but of course I never listen there.
The chip resistors are tiny tiny tiny 30x60's that is .03" by .06
inches. The ordinary Radio Shack soldering iron won't do this job. I
actually had a co-worker do it for me as she worked with surface mount
parts a lot. So before you poke a soldering iron on the board, you
better practice on some scrap board that have surface mount parts.

Haven't been in the scanning-scene for a few years since I moved
and tool the old PRO-2006 out of the cardboard box recently.
I had heard something that Bill Cheek (author of the excellent
scanner modification guides 1 thru 3) was alleged to have inoperable
cancer. If Bill has indeed passed on, my condolences to his family
and XYL. What I do find incredible (and grossly distastefull) is that some
thread has apparently started linking this man's passing with some
off-the-wall ham radio war or some other such nonsense. Makes me
glad I never got a ham ticket. I've been to 10 or 11 hamfests in the
past 10 years and I have never seen a greater collection of misfits,
screwballs
and USDA Grade-A corn flakes in any one place at any one time.
The above thread only serves to confirm my observations.

Do you know if either station uses PL tones? If they use different PL tones, and your scanner can function with them, you should be able to isolate the 2 channels.

with something

So you change your ID to disassociate yourself with the previous one. I understand your reasoning.

But Wacky Mackey frequently changes it to obvious variations of his own name (JoHn MaCKEY, M.A.C.K.E.Y., John the
innocent, etc.) Do you see the difference? Such changes don't accomplish what you described, in fact, quite the
opposite. It's quite obvious he does it to evade filters. He's a little attention-starved screwball that can't
stand to be ignored. He changes his name to get in your face, not to get away.

> that they got offended over long before.
> BTW, I'm not John but it's his right to change his ID. Some people are restless and like
to change their ID alot.
> Look at Madonna. :)

Madonna? Mackey? Now there's a comparison to mull over. How long have you known the friggin' loon?

RanHefner <ranhefnerNOraSPAM@yahoo.com.invalid> writes:

' The very least you should get is a 900MHz Digital phone. There
' are many out there for very reasonable prices. Of course, there
' are bigger and better features, but the price follows the
' features.

It looks like I am posting sooner than I expected. I have a brand new
PRO-94 from Radio Shack charging right now. I also own a GE 900Mghz
Digital Spread Spectrum (who came up with that name?) cordless phone.
I have in the past made orders over that phone with my credit card.
So far, it hasn't bit me in the backside yet. But now I would like a
quick primer on testing to see if I can hear what is transmited by the
handset and base. The manual claimed that this was a secure means of
transmission. The handset is supposed to be placed back in the base
periodically to change the cipher key or something.

While I'm here, replying to a two day old post, is the booklet
entitled ``National Public Safety Trunked System Frequency & Talk
Group Guid'' _the_ frequency guide? Or is their another guide with
similar name that covers all the frequencies?

I hope that wasn't a FAQ. Give me a day or two. I'll read the
manuals as soon as I'm caught up on my correspondence.

REGARDLESS, he may very well have broken laws and certainly violated
net-ettiquite by
re-posting without permission. Retroactive premission hardly counts.

Plus, you have posted off-topic, Richard!

One fellow found that out the hard way.

I recall seeing a news documentary on that subject not long ago. IIRC
It seems a woman was murdered but the prime suspect had called via his
cell phone and left a message on her answering machine that he was
miles away in a traffic jam and wouldn't be able to come over that
particular night. The police got the phone records and Uh Oh, he was
only a few blocks away from her house according to the cell records
instead of miles away as he said. IIRC he's now serving a life
sentence.

I ordered a scanner HH antenna from CA and it was shipped July 11. I live in Indiana.
The antenna got to Illinois with no further activity reported for three days. Then it says
the antenna went back to CA. It was incorrectly routed and is headed back towards
Illinois again. Hope to see it some day.

I wish the local UPS terminal customer counter was open for 3 hours daily, they are open 1 hour in the morning and 1/2 hour in the evening at 5pm, then they lock the door at 5:20 so if you are not there by then just "tough s**t". Apparently they want to cater to businesses and couldn't care less about individuals. It is almost impossible for me to ever make it to the terminal on time. I'm going to look into FedEx ground shipping from now on, locally they are open 12 hours daily, PLUS Saturday hours. USPS is great for smaller packages, but as they get heavier the prices increase greatly.

The local office here in Fairbanks is then

1159. Pro-92 and trunking problems?

Newsgroup: rec.radio.scanner
Date: 2000-07-20 00:00:00 UTC
From: Tony Cellini <drksky@home.com>
Message-ID: <39770010.81C3D759@home.com>
Source record: 84536

Just bought a Pro-92 to use with my local emergency service's EF Johnson trunking system. Problem is that most of the time, all that happens is a channel will open, I'll hear a short bit of dead air, then the channel closes and it continues scanning. Plus, on the rare occasions that I do hear someone, 9 times out of ten, it doesn't display the LT code. I've double and triple checked the freqeuncies, even re-initialized the scanner and started from scratch. Did I get one with a trunking problem, or is this kind of behaviour normal?

I've tried a couple different antennas: The stock rubber ducky, a telescoping whip, and a Radio Shack 20-176 mounted on the roof.

Any ideas or info would be greatly appreciated.

In this area (Silicon Valley) for a very nominal fee, $1 or so, UPS will pick up. With gas prices so high and congestion on the roads to bad this is a bargain but you have to be home for the pickup and they don't even tell you morning or afternoon and can come as late as 7 PM.

jdm wrote:

Source record: 84547

Are there any handhelds/portables besides the Pro-92 that decode E.F. Johnson trunking?? From what I've seen so far, the 92 does a pretty piss-poor job of tracking LTR.

I know the BC2078? is supposed to have LTR tracking, but it's not available yet (damn FCC).

Source record: 84549

I am auctioning my PRO-2066 scanner on eBay. It can follow Motorola trunking systems. It has 9 service searches including CB. It is designed to be a mobile radio but can be used as a base with the proper power supply and the addition of an antenna. It is in excellent condition, includes the box and all original accessories, many of which are still in their unopened packages.

The link to the auction is:

Several of the battery powered handhelds at Radio Shack come with a dummy
battery for use when alkalines are used. Get the part number for the dummy
and you should be able to order one.

If you want one to also double as a broadcase for VHF/UHF
amateur radio, a discone is probably your best bet.

You can get them at Radio Shack for $60. There is a person who
sells some really nice ones on eBay for $40. Just go to eBay
and do a search on discone.

One thing you may want to consider. You may want to use a
seperate antenna for your amateur and scanner usage. Why? I
learned on this newsgroup that 75-ohm RG-6 coax is better than
50-ohm stuff you would have to use for amateur radio. There is
just very little loss in the higher frequencies with the RG-6
and it is much cheaper than 50-ohm stuff.

You can build a 2-meter J-Pole for under $5 that will perform
better than any DISCONE on 2-meter amateur radio.

If you do go with two antennas, you can use your scanner and
amateur radio at the same time. This comes in very handy.

Frizz:

If your area is subjected to high winds, skip the Radio Shack Discone look-alike, and get either the Diamond, or Comet, they are made much better! The Radio Shack discone elements are made of very thin, hollow stainless tubing, where the Diamond, and Comet discones use solid stainless steel elements. They cost almost twice as much, but will last forever.

> Digital Spread Spectrum (who came up with that name?) cordless phone.

Not sure what you mean. It is a digital rather than a analog signal.
Currently, there are no scanners available to the public capable of making
digital signals intelligible. Spread spectrum is the mode of transmission.
Instead of useing discrete frequencies, it scatters (spreads) the signal all
across the band (spectrum). If the band used is 902-906 mhz, then at any
given microsecond, the phone can be any any frequency in that 4 mhz range.
It then changes to a different slice of the band the next microsecond.

> The handset is supposed to be placed back in the base
> periodically to change the cipher key or something.

This keys the handset to the base so that both units are looking at the same
spot of frequency at the same time, i.e. synchronizes the spectrum-hopping.
Without this sychronization, the base and handset couldn't talk to each
other.

1186. Airline Ground Operations Frequencies

Newsgroup: rec.radio.scanner
Date: 2000-07-20 00:00:00 UTC
From: markinillinois@webtv.net

Source record: 84563

When near an airport, airline ground operational frequencies always
provide interesting listening. On UHF, the frequency range is
460.650-460.875 MHz with 25 KHz spacing.

Does anyone know the frequencies and/or frequency allocations in the 800
& 900 MHz area?

You can also consider the Nevada ANT-426 Double Discone (actually
a bicone) which will have a "flatter" pattern and a little gain over
a discone but have its broadband characteristics. I really like
mine.

Search on the web for the name and model number to find dealers.
approx. $100.

' > Digital Spread Spectrum (who came up with that name?) cordless phone.
'
' Not sure what you mean. It is a digital rather than a analog signal.

It says digital. If this comes out as white noise, I'll be happy. I
figure only the boys at Ft Meade will be able to listen in. And
anyone with a pair of aligator clips and access to the phone line! :-)

' This keys the handset to the base so that both units are looking at the same
' spot of frequency at the same time, i.e. synchronizes the spectrum-hopping.
' Without this sychronization, the base and handset couldn't talk to each
' other.

Ok, that makes sense.

The strongsignals.net website that was posted here recently is proving to
be a valuable source of information. I've been going through that.
It lists phone frequencies I can test. I live in a college town, and
it wouldn't surprise me if people are using conventional phones,
although the 900Mhz phones digital and otherwise have come down in
price since the release of the 1.2Ghz models.

Given the low cost of digital phones in the 900Mhz band, I would think
that it is a prudent thing to replace older style phones with these
things. It is so easy to use a credit card for mail order on a
cordless phone without even thinking about it.

I'm listening to the 2 meter band right now. I am getting good
reception considering the PRO-94 is a handheld with a little whip
antenna. Interesting stuff. I can see why this hobby is so engaging.

It sounds to me like HAM is even more fun. I can see my money running
away from me in that direction some time in the future.

I may be new to r.r.s, but I am not new to the laws of physics (not
that I am a physicist). I can assure you that the milliwatt output of
non-ionizing radiation from the handset of a cordless phone or cell
phone is no danger whatsoever. Your head radiates more heat than it
will ever get from the phone. The non-ionizing nature of the
radiation, even in microwave frequencies, means that there is not
enough energy to bust up any molecules in the vicinity of the
transmiter.

Now if you are talking about airport radar, that is another story.
That will cook you in on revolution! But only if you are next to the
antenna.

' Did you know that your cell phone is a tracking device?
' http://www.webdeals.net/celltrack.htm

Well, how else do you suppose a call is routed to your phone? The
phone _must_ send a signal out to notify the network of its location.
In fact, that signal can be used by portable equipment to find you
directly. This can be very useful for people who are lost in the
woods and need to call search and rescue.

All this only works when the phone is turned on of course.

The PA state police are installing a system for locating motorists who
make emergency calls but don't know their exact location. I don't
know how complete the system is yet.

I too have a RS discone and have never had a problem with it in the four years I have owned it. As far as using it to transmit on, forget it. I tried that route. It is just to broadbanded for decent transmitting. There are plenty of inexpensive 6m, 2m or 440 base antennas around($20-$60)that I suggest you buy both a discone and a ham UHF/VHF base antenna. You will be happier with the results in the long run.

> I too have a RS discone and have never had a problem with it in the
> four years I have owned it.

I have a friend that had one several years ago. He said some of the elements fell off it and wouldn't buy another one. But, on the other hand, I've heard from others that own them and say they've never had a bit of trouble. I've never had a Radio Shack discone, though, so can't speak from personal experience.

My discone is a military surplus AT-197/GR discone, originally designed for the UHF military air band. It works great on VHF/UHF, and marginal at Low-V, but will still pick up signals down there. Transmitting-wise, it has a decent SWR over the entire VHF-High band, as discovered with my antenna analyzer. Unfortunately my analyzer only goes up to 175 MHZ, so can't check it on UHF. However on 440 it works great. I did have to modify the connector as it had some sort of military connecter which was similar to an N connector, but larger. It was a simple task to remove it and attach an SO-239 barrel connector to the thick coax in the mast. Works like a dream, especially for listening to UHF mil air.

The best part about it is that it's built like a tank. It survived golfball-sized hail, which just shattered against the antenna elements. The bad side is that it wieghs close to 10 lbs. It's painted in that wonderful olive-drab green the army loves so much.

If you can find one, get one! No, mine's not for sale at any price!

Same reason these assholes weren't charged with child abuse. The bleeding heart right wing Republicans would rather turn it into a political clusterf**k rather than make an example of these jackasses. No different than Randy Weaver using his family as a shield rather then face up to the charges against him. Pointless actions by cowards hiding behind women and children. Period. Doesn't matter what the blundering Feds did, the Davidians and Weaver made the ultimate choice to hide behind women and children rather then face the courts like the rest of the society they live in does. Cowards!

> More guns means less crime. ISBN:0-226-49363-6

What North Idaho NRA sponsored Pep Ralley did you learn this at Sylvan? Did you even think about it for a second before swearing your aleagiance to Heston? If more guns mean less crime, then with the amount of guns in the USA we should have an almost 0% crime rate and empty prisions. The same logic dictates Canada and England being overrun by cime centuries ago.

Glenn

No, of course not. It's the government's new secret project to control propagation. They use HAARP along with the various mind-control satellites to modify the neutrino layer which polarizes the ionosphere in such a way to allow military radios to hear each other, but nobody else can hear anything. They do this so their black helicopters can communicate with the UFO's that are bringing greys in to work at Area 51 in order to bring about the New World Order.

I know it's true because I read it on the internet!

What you are saying then is that a cell phone KNOWS it's location?? Somehow
I don't think so. A given cell phone CAN be located by normal radio signal
location procedures (triangulation, etc), but the phone itself has nothing
to do with that, nor does it KNOW it's own location.

I think that you overgeneralized with your message. To my knowledge, there
are no laws against using a cellphone 'while mobile. There are a few places
that are trying to make it unlawful to use a cellphone while DRIVING though.
Big difference.

Bob.
I think that's what he meant, just not stated clearly. A more grammatically correct (GC??) way of phrasing it would have been "The phone_must_send a signal out to allow the network to determine it's location."

Having said that, I've recently heard of some new cellphones that are incorporating GPS receivers. The phones then WILL be able to tell the network their location.

Did it get 'stuck' at CACHE, IL??? I had a printer cartridge, ordered 6/30 end up there, then went to Menlo Park, CA before finally making it here to Chicago 7/18. When I received it, the main rectangular 'dot bar code' was partially damaged, so another one had been placed on it. I wonder if any 'unreadable' codes end up in California to be recoded?

Source record: 84422

I know why cell phones are trying to be made illegal while driving.
I've never tried a cell phone before in my car until about 5 months ago.
The rare times I use a cell phone while mobile, I realize that I'm so caught
up into trying to communicate with the other person, that I space out and forget i'm
driving.
I end up driving too slow, and deviating from a fixed center position in my lane.
That's bullshit and explains why people with cell phones are completely oblivious to
everyone
they are holding up behind them or the cars they get close to running into because they are
not
paying attention. Someday, I can see where Cell phones will be considered as bad as drunk
driving
as driving under the influence of a cell phone apparently gives similar results.

The ONLY validity is that it's just another classic
example of how ham radio has sunken down into the
gutter, scraping the opposite side of the bottom
of the barrel. (the part that lays on the bare
dirt that slugs and bugs live under) This is a
PERFECT EXAMPLE of why I feel that Commercial
RF Spectrum Interests should completely be given over
exclusive rights and re-assignment to ALL Amateur
Radio Frequencies above 144 MegaHertz.

Thanks for this piece of trashy ham radio guttersniping.

You can be sure that I will forward a copy of
this post to those business and commercial
interests I personally know, who are looking for
any evidence to present to the FCC, in justification
of the re-assignment of VHF/UHF ham radio RF Spectrum
to the exploding market for Commercial Wireless Services.

ST. LOUIS (Reuters) - An outside investigator on Friday
completely absolved Attorney General Janet Reno and the U.S.
government of wrongdoing in the 1993 siege and fire at the
Branch Davidian compound near Waco, Texas, saying the group's
leaders set the blaze and shot at their own people.

``There is no evidence of any wrongdoing on the part of Attorney
General Reno, the present and former director of the FBI, other
high officials of the United States or members of the FBI
hostage team who fired pyrotechnic tear gas on April 19, 1993,''
former Sen. John Danforth, a Republican from Missouri, told a
news conference.

Reno appointed Danforth 10 months ago to make the investigation,
under pressure from members of Congress who alleged there had
been a cover-up of government wrongdoing.

``I give you these conclusions with 100 percent certainly,''
Danforth said. ``They are, one -- government agents did not
start the fire at Waco; two -- government agents did not shoot
at the Davidians on April 19, 1993; three -- the government did
not improperly use the United States military; and four -- the
government did not engage in a massive conspiracy and cover-up.''

Danforth's report said, ``The tragedy at Waco rests with certain
Branch Davidians and their leader David Koresh who shot and
killed four (government) agents, wounded 20 others, shot at FBI
agents trying to insert tear gas into the complex, burned down
the complex, and shot at least 20 of their own people, including
five children.''

Hell no.
The FCC has no right to give up frequency to commercialism at all.
That's the whole frigging problem. The damned FCC sold off the 800Mhz
Cell band (which they had no right to do) and look what happened to us!
Now, everytime we buy a scanner, we have a big chunk of frequencies blocked on it.
Tell your buddies at the FCC, if they want to "sell out", tell them to make the commercial companies encrypt and decrypt their communications instead of crippling our equipment.

That's what I should have said. Each cell phone has an ID. The phone
is obviously listening for incomming calls. The phone also sends out
blips (I don't know what the cell guys call 'em). The cell will pick
it up and the network will know which cell(s) can hear the phone.

Anyway, the network knows where you are to route a landline call to
you.

>Same reason these assholes weren't charged with child abuse. The bleeding

Exactly. The government KNOWS they couldn't prove it. It is one thing
for the gov't to hide and fabricate evidence at the scene, and to
ignore expert testimony at the trial, but it is quite another to go up
against what the local law had investigated and found baseless just a
few days before the assault.

>heart right wing Republicans would rather turn it into a political

"bleeding heart republicans" ??? Wow, a first for everything!

>than Randy Weaver using his family as a shield rather then face up to the
>charges against him. Pointless actions by cowards hiding behind women and

How can you be so Clueless?

Don't you know that the BATF admitted to entrapment of Randy Weaver?

Don't you know that Randy was coerced into acting as a spy for the
BATF?

Don't you know that when he finally refused to spy any more, that is
when the BATF filed the charges against him?

Don't you know that Randy's original court date to face those charges
was pulled up WITHOUT informing him, and the first he knew was when he
found out a warrant had been issued because he missed the earlier date
(at a courthouse several hundred miles from his home)?

Don't you know that the first shot was fired by a federal agent,
killing the family pet on the family property, right in front of
the son, while Randy was nowhere near?

Don't you know that neither Randy Weaver nor David Koresh was "holed
up" before the feds came shooting?

Don't you know that both Weaver and Koresh made frequent trips "into
town" and were frequently away from home and family and could easily
have been arrested with no raid, and no family involvement?

Of course you don't, because you are a clueless idiot and don't even
know half of what the equally stupid media has reported.

>> More guns means less crime. ISBN:0-226-49363-6

Did you look up the ISBN? Do you know HOW to look up an ISBN?
Do you even know what an ISBN is???

>What North Idaho NRA sponsored Pep Ralley did you learn this at Sylvan? Did

Are you asking for a slander suit? Why don't you quit hiding behind
a legally anonymous usa.net e-mail address and send me your name and
address with a signed confession to making that kind of allegation?
Until then, you just keep on talking big from your little hole.

For the record, I support Jews for the Preservation of Firearm
Ownership, http://www.jpfo.org/ and encourage all to do the same. If
you do not support them, you stand against them as a racist coward. I
also support http://www.gunowners.org/ and the 2nd amendment sisters
(don't recall their website at the moment).

>you even think about it for a second before swearing your aleagiance to
>Heston?

I've never liked Heston. He is willing to sell his soul and mine to
keep a muzzle loader. Do you know what a muzzle loader is? The NRA
has always been willing to compromise liberty, but we are working to
fix that. Of course, I didn't join the NRA until well after Clinton
was elected and sworn in. I didn't buy my first gun for a year or two
after that. I may be slow, but I learned my lesson. Your time will
come. I just hope you figure it out before it's too late.

>If more guns mean less crime, then with the amount of guns in the
>USA we should have an almost 0% crime rate and empty prisions. The same
>logic dictates Canada and England being overrun by cime centuries ago.

The same broken logic, based on flawed premises. "less" has never
meant "almost 0" and never will. And as for Canada and England...

Just 55 years ago England was giving away WWII weapons to civilians.
Canada had even less gun restrictions than the U.S. Now that they have
both essentialy banned guns, both of them have soaring crime rates,
increasing far faster than the US which has been much slower at
adopting gun control. Also add Australia to the list.

>Glenn

Hi Jim,

Your question can be the catalyst for a great discussion.

You mentioned monitoring garbage men and taxis. Don't sell business and industrial monitoring
short. It's fun. I listen to security guards, army comms, low power frequencies, wireless
mikes, sports comms, FRS, hotel staff, and lots of other signals more than police and fire.

I avoided a major traffic jam yesterday because I heard a delivery truck driver warn other drivers about it.

Your PRO-51 can also monitor aircraft, VHF marine, and railroad signals. Don't confine your monitoring to authorized frequencies. Listen "in the corners"
of the spectrum.

Enjoy pilot-to-pilot chatter on 123.45 MHz, for instance (and 234.5 MHz if
you get a mil air scanner). I've monitored and located two bootleg repeaters in the 138 - 144 and 148 - 150 MHz federal bands.

Find the frequencies used by garage door openers, wireless doorbells, heart monitors,
electronic dog collars, wireless intercoms, etc. If a device emits RF, I want to know its frequency. Last night, I heard my new Logitech cordless
wheel mouse on 27.045 MHz.

How about DX? The 30 - 50 MHz band has been open in the mornings. From here in
Illinois, I tuned in New York City taxi chatter,
South American repeaters, southern highway workers, far away US military comms,
and lots of other DX during a 20 minute listening session today. Hearing
all those accents was entertaining.

Become a scanning "renaissance man."

I am in Ohio and had a radio shack discone less than 6 months before an ice storm took it down. The hollow elements did not stand up to the weight of the ice. So if you live in Florida they should be fine but anywhere there is a possibility of an ice storm or heavy snow forget it!

You are better off with a discone that uses solid elements in its construction.

I don't generally forward things like this, but in this Politically Correct world we live in, someone has to say "Alright, Enough Already"

For those who have any type of communications background- simply substitute the words "Scanner" and "ECPA" into the appropriate places.... scary, isn't it?

de Bill, N3DDY

Where We're Headed
By Robert A. Waters

****

You're sound asleep when you hear a thump outside your bedroom door.
Half-awake, and nearly paralyzed with fear, you hear muffled
whispers. At least two people have broken
into your house and are moving your way.

With your heart pumping, you reach down beside your bed
and pick up your shotgun. You rack a shell into the
chamber, then inch toward the door and open it.

In the darkness, you make out two shadows.
One holds a weapon--it looks like a crowbar.

When the intruder brandishes it as if to strike, you raise the
shotgun and fire. The blast knocks both thugs to the floor.

One writhes and screams while the second man crawls to
the front door and lurches outside.

As you pick up the telephone to call police, you know you're
in trouble. In your country, most guns were outlawed years
before, and the few that are privately owned are so stringently
regulated as to make them useless.

Yours was never registered.

Police arrive and inform you that the second burglar has died.

They arrest you for First Degree Murder and Illegal
Possession of a Firearm.

When you talk to your attorney, he tells you not to worry:
authorities will probably plea the case down to manslaughter.
"What kind of sentence will I get?" you ask.
"Only ten-to-twelve years," he replies, as if that's nothing.

"Behave yourself, and you'll be out in seven."

The next day, the shooting is the lead story
in the local newspaper. Somehow, you're portrayed as an
eccentric vigilante while the two men you shot are
represented as choir boys. Their friends and relatives can't find
an unkind word to say about them. Buried deep down in the article,
authorities acknowledge that both "victims" have been
arrested numerous times. But the next day's headline says it all:
"Lovable Rogue Son Didn't Deserve to Die."
The thieves have been transformed from career criminals into
Robin Hood-type pranksters.

As the days wear on, the story takes wings.
The national media picks it up, then the international media.

The surviving burglar has become a folk hero.
Your attorney says the thief is preparing to sue you, and
he'll probably win.

The media publishes reports that your home has been
burglarized several times in the past and that you've been
critical of local police for their lack of effort in apprehending the
suspects. After the last break-in, you told your neighbor that you
would be prepared next time. The District Attorney uses this to
allege that you were lying in wait for the burglars.

A few months later, you go to trial. The charges haven't been
reduced, as your lawyer had so confidently predicted. When
you take the stand, your anger at the injustice of it all works
against you. Prosecutors paint a picture of you as a mean,
vengeful man.

It doesn't take long for the jury to convict you of all charges.

The judge sentences you to life in prison.

This case really happened.

****
On August 22, 1999, Tony Martin of Emneth, Norfolk, England,
killed one burglar and wounded a second. In April, 2000, he was
convicted and is now serving a life term.

How did it become a crime to defend one's own life in the
once-great British Empire?

It started with the Pistols Act of 1903. This seemingly
reasonable law forbade selling pistols to minors or felons and
established that handgun sales were to be made only to those
who had a license. The Firearms Act of 1920 expanded licensing
to include not only handguns but all firearms except shotguns.

Later laws passed in 1953 and 1967 outlawed the carrying of any weapon by private citizens and mandated the registration of all shotguns.

Momentum for total handgun confiscation began in earnest after the Hungerford mass shooting in 1987. Michael Ryan, a mentally disturbed man with a Kalashnikov rifle, walked down the streets shooting everyone he saw. When the smoke cleared, 17 people were dead.

The British public, already de-sensitized by eighty years of "gun control", demanded even tougher restrictions.
(The seizure of all privately owned handguns was the objective even though Ryan used a rifle.)

Nine years later, at Dunblane, Scotland,
Thomas Hamilton used a semi-automatic weapon to murder 16 children and a teacher at a public school.

For many years, the media had portrayed all gun owners as mentally unstable,
or worse, criminals. Now the press had a real
kook with which to beat up law-abiding gun owners. Day after day, week after week, the media gave up all
pretense of objectivity and demanded a total ban on all handguns.

The Dunblane Inquiry, a few months later,sealed the fate of the few sidearms still owned by private citizens.

During the years in which the British government incrementally took away most gun rights, the notion that a citizen had the right to armed self-defense came to be seen as vigilantism. Authorities refused to grant gun licenses to people who were threatened, claiming that self-defense was no longer considered a reason to own a gun. Citizens who shot burglars or robbers or rapists were charged while the real criminals were released. Indeed, after the Martin shooting, a police spokesman was quoted as saying, "We cannot have people take the law into their own hands."

All of Martin's neighbors had been robbed numerous times, and several elderly people were severely injured in beatings by young thugs who had no fear of the consequences. Martin himself, a collector of antiques, had seen most of his collection trashed or stolen by burglars.

When the Dunblane Inquiry ended, citizens who owned handguns were given three months to turn them over to local authorities. Being good British subjects, most people obeyed the law. The few who didn't were visited by police and
threatened with ten-year prison sentences if they didn't comply.

Police later bragged that they'd taken nearly 200,000 handguns from private citizens.

How did the authorities know who had handguns?

The guns had been registered and licensed.

Kinda like cars.

Sound familiar?

WAKE UP AMERICA, THIS IS WHY OUR
FOUNDING FATHERS PUT THE SECOND

Actually, I believe they are on microwave freqs and their signal is shot up to a helicopter, then sent back down to the control trailer. That way line of sight is always maintained. This is why you see the signal break up when they go under a bridge or overpass. If any experts care to elaborate further, I would love to hear more, JK.

I would assume that people know what a "cache" is????

The dictionary says "A hiding place." It also says something "...hidden or stored in a cache."

Thus UPS has appropriately used "Cache", IL as a place to hide and store all our packages until THEY feel like doing something about finding out where they are.

Ironic, isn't it?

>woods and need to call search and rescue.
The FCC has mandated the ability to locate phones, and most are going
to use a system that is pretty simple.
Most Cells phones can be heard from more than one tower. What will
happen when required is multiple towers will be enabled to look for
the call. The difference in signal arrival times among the towers
makes it fairly easy to calculate the actual location of the phone
within 100 yards or so. in the case of GSM, the timing advance already
provides a good estimate of distance from the tower. The difference in
arrival times gives you distance from the second tower, and distance
between the towers gives you the 3rd side of the triangle.

>

Personally - I don't think you will regret buying/owning either... They are
both great brands.... What's the battery life in each?... I haven't owned
either but have toyed around with them.... I have an Icom IC-R10 as my
current handheld scanner. 4x AA batteries will only last a day at the most
(6 - 8 hrs).
I have owned previous models in both brands and as per expectation, they
both performed well...
I like AOR, they are always good value but expensive... They are well made
and sturdy and usually have many features. The only thing of question I
have found with their handhelds is that they take a pilots license to
operate (at least in their past models). Pretty hard at times...
The Yupiteru handhelds on the other hand always "looked" a little timid and
plasticky but have been a damned good package both strong and sturdy too.
Their latest models look like they are jam-packed with features too.

I like my Icom R10 but it too looks plasticky but it is very very
lightweight and sturdy and boy it performs well..
In the past, the only thing that was of a concern with AOR handhelds was
that they had a few synthesiser sounds (hums) every so often but I believe
they may have cured a lot of these lately..

In my opinion - If you want to own an AOR because of their majestic
performance - buy one...
If you simply want to upgrade from the MVT9000, you amy not notice too much
more performance in the AOR...
Your call......

You are so-o-o right! However, there is a vast base of 49mhz cordless
phones already out there, and they are still being sold at give-away prices.
Of course, the Communications Act of 1994, as amended, prohibits listening
to cordless telephones, so all those people are absolutely safe in using
them. (Ha-Ha!)

1288. 900 MHz Cordless Telephones

Newsgroup: rec.radio.scanner
Date: 2000-07-22 00:00:00 UTC
From: Green
Message-ID: <a0fc3@alt.radio.scanner>
Source record: 84252

I am a very law-abiding citizen and want to know precisely which frequencies are used by 900 MHz cordless telephones so that I may avoid them while scanning this band.

A list I once located indicated these phones use 902.100 to 903.870 for base and 926.100 to 927.870 for handset operations. However, I have accidentally encountered what appeared to be cordless signals in other areas of the 902-928 MHz band.

Is there a page on the FCC's web site that provides a master list of frequencies authorized for 900 MHz cordless telephone lists? (Or if anyone has created one, that would be equally as welcome.) Bottom line is, I can't use any lists drawn from 900 MHz cordless telephone manuals; those may only list *some* of the frequencies authorized for such usage, and by relying strictly on such data, I could possibly still stumble upon active signals. :-(

Any information would be appreciated.

1289. Re: Tell us where you've found the PRO-92A?

Well I don't have the new PRO-92A in hand, but.... it doesn't
take a rocket scientist to look around the web and find lots of
problems/complaints about the PRO-92.

For those of us in the market for buying now, it would not be a
smart purchase to buy a model whom Radio Shack has now admitted
(by producing an update) there are problems with.

For those of you out there that can get your hands on a PRO-92A,
I would be willing to compensate you with a finders fee!!

Todd I hate to be the one that brings bad news but they still haven't
gotten rid of your link. I would suggest either of 2 solutions.
#1. Check out who actually runs the site. Registered mail has to be
signed for and I would bet looked at as well.
It doesn't cost very much. A really strong worked letter usually is enough
unless they are complete assholes.
#2. Change your provider. That way the link will never work again no matter
what they do.

I'll second the poor reception comment. Sometimes I ride my bike around and I hook the scanner to it. It's so broken up and choppy it's almost totally incoherent. The Pro-91 does fine however.

There are supposedly no plans for a MultiNet receiver, either. I'm not sure why. In my area, MultiNet is much more popular for public safety than LTR. In fact, LTR is only used for business here.

It might be due to the technology used by GRE to make the PRO-92/94/2052/2067 series. Except for EDACS, the latest GRE trackers use slow-speed data on the voice channels instead of the high-speed control channel datastream. LTR has no control channel, so it lends itself well to that type of tracking. MultiNet uses a subaudible control channel, and maybe nobody has a license to use any existing technology to track it.

I was with you until you mentioned the "right of assembly" in connection with monitoring. I believe that we have a First Amendment right to monitor and divulge government radio communications, but not from the Free Association clause.

> Besides, the airwaves are a PUBLIC resource. They belong to the
> people. It is just plain silly to say you can't monitor the
> frequencies from x to z. It's worse than that. Such a law is a
> precedent for other arbitrary restrictions on harmless activities.

Not a precedent but a continuation of a trend that has existed since the 1930s.

For a discussion of some legal principles affecting the scanning hobby, you might be interested in visiting The Rapid Media Project at http://rapid-media.org .

Right on! Why is it always the people who've never stepped foot outside the
US that always complain about how bad it is in this country? I've been
there. Trust me, if you think we have no rights, go to ANY other country.
Why are people coming here in droves from Mexico? Why are people risking
their lives on homemade rafts to get here from Cuba?

Just because we don't have the right to drive without licenses or walk
around with fully-automatic weapons some people think this is a "police
state."

Give me a break.

Yes, the government does on occasion overstep its bounds. It is too big.
There are too many federal regulations. Sometimes your congressman doesn't
care about you.

But it's not too late to fix it, no matter what some people say.

1300. WXSat and SB Live problem

Newsgroup: rec.radio.scanner
Date: 2000-07-22 00:00:00 UTC
From: Ash <ash@gravitywell.org>
Message-ID: <3979CCE7.5773F46C@gravitywell.org>
Source record: 84357
Cross-posted to: rec.radio.amateur.space,rec.radio.scanner,alt.radio.scanner

After switching from an awe64 to Live player. (LiveWare 3) the pictures
are almost pitchblack
in wxsat, it's .wav recording seems to work if I open it in Satsignal.
All other decoding programs such as Wacars & Poc32 works just fine so it
has nothing to
do with the input signal strength but how wxsats interprets it.
Has anyone else this problem with wxsat or know a remedy to it?
I've tried to find an email to the creators of wxsat but cannot find
it..

1301. VHF/UHF Discone & HF/VHF/UHF Super Discones

Newsgroup: rec.radio.scanner
Date: 2000-07-22 00:00:00 UTC
From: antenna_warehouse@my-deja.com
Message-ID: <8lckh1$em5$1@nnrp1.deja.com>
Source record: 84358

Hello,

I have both VHF/UHF Discone, and HF/VHF/UHF Super Discone antennas up on eBay Dutch auctions.

The VHF/UHF Discone are great wide band receive antennas, and are good for Transmitting in the Amateur 144, 220, 440, 900, and 1290 MHz. bands with a SWR of 1.5 to 1 or less. They are $29.95

This Auction ends 7/23 9:04 pm cst.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=384390878

The Super Discone has additional tunable elements that give this antenna greatly enhanced performance in the 25-30 MHz. and the 45-50 MHz. bands. They are $45.95

This auction ends 7/23 9:10 pm cst

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=384402075

These are being sold in a Dutch auction, which means no worries about being outbid at the last moment, or the price sky rocketing because of bidding wars. You bid, you pay, you get one! If you don't want to go the eBay route, no problem! Just contact me direct.

Be sure to check our other auctions and website for other great deals on Scanner, CB, and Amateur antennas.

Thank you

Hi LoPan,

(Interesting name. I like "Merlin," myself. And always "customized."
You're aware of the 1.31 bug fix that's out there, right? I could probably
use "Call The Void," about now.) 8^)

I figure it's one of two things. 1) In typical form, they haven't yet
checked thier e-mail, and are in for the shock of thier life when they
finally get around to it. 2) They have already, are scared to death, and
they're not sure what to do or how to handle it, now. 8^) Probably trying
to think of what kind of letter to write back to me which is butt-kissing
and yet does not show any sign of the anger that they're probably
expressing behind the scenes, throwing furniture around, at this very
moment. 8^) You know. 8^)

Either way, in just three days nearly two hundred users have read my
little side-page about Speedtrap. So it's getting good attentiion, anyway.
8^) But that's why I put that side page there. If Speedtrap decides to
visit, they'll see the counter size and think twice. For all the hits they
provide me, my site is not so bad that I don't provide _great_ user numbers
to _other_ sites, as well.
I get 250 hits a day, or nearly 7600 a month. Of those, seems about 63 a
day are reading that Speedtrap sidebar. 8^) Which equates to about 1900
people reading that every month. And that'll probably increase, too, as
time goes by. So yes, they'd better pay attention, I think, if they're
smart. 8^) Getting lots of positive mail. No negative mail so far, but
I'm sure that will come.

As for contacting them by registered mail, I'm not sure they have an
address even listed anywhere on the site. But, I'll check again. They
very well may, and I just haven't noticed it, yet. At this point though,
that's not on my agenda unless it takes an inordinately long time for the
link to be removed, and no response ever comes.

I want to keep my provider, though, for two reasons: 1) I've been here for about 7 years and everyone is used to me being where I am, and ALL of my other pages would have to be like-updated/adjusted. (I run a bunch). 2) As well, my ISP absolutely and completely free: the e-mail, web access, web page space. It's what they call a "FreeNet." They're kinda rare, but we're lucky enough to have one down here. 8^)
Still though, when you think about it, I shouldn't have to change things on my end (which would be a major inconvenience for me, and only a minor inconvenience for them) just because one site out there is being an idiot. You know? It wouldn't be fair, and I'd still be the one affected.

Anyway, you take care,

Todd

>I think that you overgeneralized with your message. To my knowledge, there
>are no laws against using a cellphone 'while mobile. There are a few
places
>that are trying to make it unlawful to use a cellphone while DRIVING
though.
>Big difference.

Perhaps. But I think you're really nitpicking, since driving a bicycle,
a moped, a go cart, a tractor, an 18-wheeled tractor-trailor, an
automobile, or a RCM model airplane...the effects would be the same, and
noone is immune.

The bicyclist would still run the risk of driving in front of another
car, or swerving suddenly out into traffic, and he would still have only
one hand on the handlebars, if that. 8^) Then SPLAT! Next day the
headlines would read: "BICYCLIST KILLED WHILE USING CELLPHONE," and it
would get even more attention than the auto accidents would, because it's
different; and to the Press, it would only back up the theory of cellphone
inattention causing accidents. They'd eat it up.

I'm sure they probably _did_ intend bicycles and mopeds, too.

God help us if RCMers, too, start using cell phones while they play with
thier toys! (grin) Probably end up with a good many people suddenly
experiencing "buzz cuts" from out of the blue. (chuckle)
"...I dunno officer! I'd just come out of that shopping center over
there, when all of a sudden there was a loud `VRRRRP!,' a wind, I felt my
head...and my _hair_ was gone!" 8^) Headlines: "MYSTERIOUS WIND
DISSOLVES HAIR OF NUMEROUS VICTIM PEDESTRIANS DOWNTOWN. POLICE STILL
INVESTIGATING."

I wonder if it includes while boating? 8^) I can just see it
now..."OIL-CARRYING SUPERTANKER CRASHES INTO TAMPA BAY BRIDGE - PILOT
ADMITS HE WAS ON CELLPHONE."

I wonder what would happen if I let my cat use a cellphone? Hmm.
(Probably end up with a pretty big bill, knowing MY cat.) 8^)

Anyway, your gripe should really be with ABC News, since that is where I
got my wording from.

Todd

I own 4 scanners, (4 portables and 1 desktop). The desktop is 200 channels, the portables are 10 channels-old, which my parents use(retired) and I listen to Pro-34, Pro-91 and Pro-94 (1000 channels). None which are capable of picking up CB frequenies. The main reason I use them is when you travel you can hear the truckers report police running radar and traffic accidents so you are able to avoid certain areas by bypassing the area. I've seen 1 desktop model that broadcasts the frequencies, why not the portables?

The Sony Wavehawk and ICOM R2 both pick up CB.

The only AOR I have owned was the 8000 and I didnt really like it. I have owned the yupi 7100 and the 9000 and still believe there is nothing on the market today that compares. I actuall just traded the 9000 off to go back to the 7100 because I feel it is the better radio.

Good luck,

Oh Pllleeeeeaaaasseee, GIVE ME A BREAK!

Like someone else said...go over to the paranoid newsgroups. I get it
very well.

However, I don't need to see this same paranoia re-hashed over and
0ver again on a scanner newsgroup.

They are NOT gonna take your scanners, and they are NOT gonna take
your guns. Give it a rest. Life is too short.

Anyway, the boobs in this country keep Senators and Congresspeople in
office for decades. THEY are to blame, no one else.

Dan

Bill,

Take a trip around the world and find out we're
the best place in the world, where people risk
their lives and spend their fortunes to get here.

If that's what you really think, that we are a "Police State",
then get the fuck out. I suggest Serbia so you'll learn what
a police state is.

I can't believe I defended this country for pussies
like you.

monty

When the government has aimed guns at you and your family
then tell me how great this country is. Yes it happened to me.

So they bring in 120 MILLION DOLLARS a day! For beating the crap out of your packages!
Never fails some employee or stockholder will jump in and defend them, course they all have computers cause they are all so rich from charging premium prices for crap service--use Fedex 2 day air, costs a little more, much faster and safer. Just my opinion....

Signal strength is a very poor and inaccurate way to do it, because
you have no idea what is between the phone and the tower at this
moment. All of the commercial solutions being offered to meet the FCC
requirements depend upon measuring time differences, which are pretty
much independent of singal strength, and far more accurate.
>
>
>By the way....I'm a Network Technician for a cellular company so
>I'm not just blowing smoke.
And the only way a Network knows where an AMPS phone is, is when it
logs on, or it places or receives a call. I don't know about CDMA or
TDMA, but most GSM networks actually poll the phone at regular
intervals. You don't see anyting, but outside the USA where FCC
interference rules don't apply, you can frequently hear the poll on
your car radio, you landline phone, your computer, and all sorts of
other equipment. Polling frequency is a decision of the service
provider, but is usually about once every 4-8hours.

For those of you lucky enough to have a local Radio Shack Dealer with the PRO-92A (firmware version 3.25) in stock I'd like to start a list?

Those of us looking to pick one up have a week (until July 29th, 2000)to find one and get it for a great price $249.99 then its back to $349.99.

Let us know ASAP. Thanks.

I found one in Southern Ct. The store only had the brand new one -with a serial number just over 50,000 and an old unit which was on display. The guy wasn't sure how recently the new one arrived, but he did say that turnover of scanners was pretty high in his store, so they're always arriving.

No need to open up the box, by the way, since the date code is on the back of the box! Naturally, look for 05A00.

Jeff

I was stopped last year with a AOR AR8000 and the officer did make me
lock it in the trunk.They did not confiscate it.I think it's a decision
up to the officer doing the stopping on what they do or don't do.

You know, its people like you, that really dont give a rat`s ass about your freedoms, that are aiding and abetting the undermining of rights that is going on in this country. If you dont give a damn, then shut up about it. Nobody twisted your arm to read this thread. Apathetic ? Then BE apathetic, is what I am saying here. I am glad you have such great faith that the government isn`t going to take any of your freedoms away, while they spy on your phone calls , with Echelon, and spy on your e-mail , with Carnivore, all without ever getting a search warrant, run around murdering people like Randy Weaver and his family, and the poor folks that had their right to "religious freedom" demonstrated to them in Waco, etc. Not to mention the ridiculous practice of witholding technical infomation on the service and repair of scanners, which amounts to nothing less than government censorship, , and the entire ECPA itself, which will be the foundation on which further, more restrictive laws will be passed. You know who is "Paranoid" here ? THE GOVERNMENT, THATS WHO ! How bad does it have to get before you recognize something is going on ? When they come arrest you on the basis of a law that has not even been written or passed, like they did to Bill Cheek ? Some law they just decided to "make up as they went along" ? Do you ever think about any of this stuff ? I doubt it. I doubt you even read a newspaper, or even watch a documentary on television. You are self-lobotomized and self-anethesized. You are operating in a fog, and dont like anyone waking you from your self-induced torpor. Your view is no wider than "will i get my next raise ?". Typical.

Bill,

Take a trip around the world and find out we're
the best place in the world, where people risk
their lives and spend their fortunes to get here.

If that's what you really think, that we are a "Police State",
then get the fuck out. I suggest Serbia so you'll learn what
a police state is.

I can't believe I defended this country for pussies
like you.

monty

So because Stalin, Hitler, Idi Amin were worse than other dictators
the others were ok in your book.

That was a good scanner it its day, around 1975. It came with a bunch of aluminum combs and you broke off various teeth according to a supplied freq chart and then plugged in up to about 8 combs. You could probably solder in some DIP switches to program it, assuming you had the programming chart.....

As for the Iowa State Patrol switching to digital...I don't know! I live in IA also, but I have not heard about that. As for the digital sounding voice on the NWS frequency, all that is, is a digital generated voice. There's no way they would go digital...there would be know way for the public to listen to their transmissions.

So you're going to keep posting insults about Bill while he's laying on probably the last bed above ground he'll ever occupy? While he's going through unimaginable physical pain? Of course you *know* he's way beyond being affected by your insults. But his family will still bear the brunt of your comments while they go through this horrendous waiting game. You know that too.

But you feel justified because Bill talked mean to you?

Because he complained about you? Because he booted you off some two-bit fidonet forum over half a decade ago?

And that justifies insulting family members about their mortally ill loved one?!?!

I just don't understand people of your ilk.

Your actions would be questionable directed towards a condemned murderer.

Here,.....they're just plain reprehensible.

The Ham Radio hobby must be awfully proud of you.

Michele,
To elaborate on Tim's response, they are probably using some form of digital signal encryption, that converts the analog audio to a digital signal, similar to what is done when they record a music CD. (Very simplistic comparison) Your scanner may be rejecting the signal, otherwise you'd be hearing a slight "hiss" noise similar to a carrier-only transmission. If your scanner has a "data-skip" feature, then it won't stop scanning on these signals.

Does anybody know if there will be a way to swap out the firmware chip
in the old style pro-92. Maybe even sending it back to RS repair dept
it would be worth it to scan mot systems properly.

Any ideas on this

I called RS and they said they know nothing about this. However, if it's true, I plan on returning my 92 and swapping for the updated firmware. Only reason I bought the silly thing was to track LTR and it does a really bad job of it, unless I'm doing something completely wrong...

The loacl system here is EF Johnson with 11 frequencies assigned. I've programmed all the frequencies listed in the guide into bank 000-010. Now, one of those frequencies is open ALL the time. i.e. it never gets squelched. Is this a data channel that needs to be locked out? Is this one frequency why my 92 is having so much trouble tracking LTR?

Your local system is not LTR. The constant carrier (actually a subaudible
datastream) is the control channel for a MultiNet system. There are no
currently available scanners that can track MultiNet trunking.

<Big Snip> to restrict Bandwidth wastage

The Story, as told is essentially accurate. In UK this sort of
legislation due to the Press and 'Public opinion'.
The Law Makers are effectivly Coerced into rapid and often ineffective
legislation simply on a whim of Government and knee-jerk reaction to
some, at the time calamitous, event that catches the 'Publics'
imagination.
What they appear to ignore is that the most vocal are the people from
the minority 'pressure groups'. The Press simply take the 'pressure
groups' litrature and use the information contained to verbally beat
and cajole an un-popular government. This sells newspapers, it also
denies the ordinary person a voice in the judicial review.
Time and again I have seen what appears to be a "little" law, intended
to be used 'only occasionally and with disgretion' be taken on by a
'pressure group' and all of a sudden we have a major piece of
legislation that limits the general publics rights.

Its started with 'scanners' in the US, No monitoring Cell Phones, soon
it'll be no monitoring Police. (already here in UK, strictly speaking
but not fully implemented yet, you can't legally listen to or watch
any broadcast other by government licenced BROADCAST stations).
Before you know it. No Scanners... Full Stop. and if they go really
mad.. No HF Recievers either, that'll stop 'inaccurate' information
reaching the ears of the masses. And we don't want Castro telling lies
about us to our public.

Resist any and ALL infringments to your rights, no matter if you agree
with, or exercise, those rights. They are YOUR rights and they are
being whittled away each and every day of the week. One day you will
need them.

Nuff Said.

1360. Re: tracking your cellphone!

Source record: 84480

Here's how it works....

A cellphone listens for an incoming "page" from the cellular system. All cell sites constantly monitor which mobiles (cellphones) are within their service area. The cellphone measures signal strengh of nearby cellsites and provides the results to the system to determine which cellsite is the best one to use.

Within ALL cellphone call records is the name and number of the cellsites the phone can "see", the name of the site it's actually using, the frequency and channel it's using.

Once you know which cellsite and channel a phone is using you have it's approximate location. All you have to do to narrow it down to a very precise location is compare the signal strengh readings the phone is taking of other nearby cellsites and calculate the distance.

By the way....I'm a Network Technician for a cellular company so I'm not just blowing smoke.

Oh, Reno's appointee found his boss not guilty. Man, That's great. What else did you expect him to find?

Besides that, he didn't want to wind up DEAD like Ron Brown, Vince Foster, most of Bill Klinton's personal body guards, and MANY, MANY more!

You believe their spin doctors if you like. Some of us are willing to wait and see what God thinks of them -- at the judgment. I think it will be a different story from what "her appointee" found out.

Just my $0.02.

Al

I am not a network technician for a cellular company. What I posted was based on my point of view as a systems analyst. What you posted makes perfect sense. I didn't know about the extra details of course. All I knew was that for a cell phone system to work, the system must know which cell the phone is in and which frequency it is monitoring in order to rout a call to it. It would be horribly inefficient to search for the phone on demand when the phone can be periodically saying, ``here I am.''

Therefore I think? ;-)

Listening to cell phones could be anywhere from interesting to dull depending on the conversation. I'm not sure why Congress felt that they should make it illegal to monitor cell frequencies. It seems like a much simpler solution for privacy is GSM digital. Isn't that what the new PCS phones are using?

Obviously the phone can and must still be tracked for the service to operate efficiently. It's not like they don't know where your landline phone is!

Nuff said is probably right. But at this point I feel like interjecting a comment.

I followed the Tony Martin case:

http://www.norfolk-now.co.uk/Content/News/htm/TonyMartin/htm/LinksFile.htm

as soon as I learned of it in rec.guns where it was still off topic as rec.guns is a technical forum, not a political one, just as this is a technical forum. Still, politics always rears its ugly head.

Mr. Martin may well have been in violation of the law and guilty of murder because he may have ambushed the intruders. Inspite of all that, my sympathy is still for Tony Martin and not the scum bags who tried to rob him.

Certain points to consider. Great Britain operates on pure majority rule in Parliment. Effectivly, the rights of the minority are given away at the whim of the majority.

The US Constitution made a great effort to set up a system where the majority could not trample over the rights of the minority. Unfortunately, the Constitution, along with the Bill of Rights and other amendments are really nothing more than a speed bump for the same things to happen in the States.

Currently, to be convicted of a crime in the States, the jury must be unanimous. The burden of proof is fairly high, although I think the

bar is getting lower. In Tony Martin's case, he was convicted by a 10-2 vote by the jury. In the States, this would be a hung jury and either a new trial would be held, or the matter would be dropped.

The United States inherited Common Law and the Judicial process from Great Britain. Even though we violently seperated from Great Britain we retained the legal customs. Adding the Constitution was a good idea because without it, nothing would have changed.

I hold the belief that all humans are born with the same rights by virtue of being human. This is simply my ethics system. I hold it as an axiom and not subject to proof. Unfortunately different nations have different ideas about what those human rights, if any, are. The only thing I can suggest is that the people of those nations look at one simple fact. Governments exist by the consent of the people. Even in Iraq where an evil tyrant is free to commit atrocities, his power still comes from the people he abuses.

Why does this happen? Why do people allow themselves to be subjected to the whims of others? I don't really know. Clearly people are more complex than the computers and other machines that I work with. But I do have a theory. It is not very complimentary. In the gun owner's community we have the same problem. Petor Caroline at Dillon Precision expressed it quite eloquently:

http://www.dillonprecision.com/download/vote.txt

Believe it or not, the same sentiments apply to HAM, scanners, the Internet, etc. People are not voting. In the States, we will have what is most likely going to be the most important Presidential election in our history. The fact that it is the last election of the millennium is certainly just coincidental.

We have a democratic candidate who is quite willing to ban all guns if he could in this country. I'm expecting he will win the election and at least be successful in licensing all handguns.

What does this have to do with scanners? Think of the right to keep and bear arms as the right that insures all your other rights. That is what it is. Even the right to vote and freedom of speach are protected by the RKBA. One particularly famous incident is the battle of Athens:

http://www.jpfo.org/athens.htm

This is PROOF that it CAN happen here.

The fact that scanners are no longer allowed to monitor all frequencies and that two states have banned radar detectors, as has the district of colombia, is a clear signal that freedom of assembly is being violated. I see my writing is getting a little incoherent. I've been up all night and it seems to be showing, but I feel I must continue anyway.

I have no objections to people wanting to use the airwaves with
privacy. That can be achieved by digital transmissions and strong
encryption systems. I define strong as something the NSA can't
crack. There is no need to prohibit the reception of the signal or
even attempts to crack the cipher. A good cipher system will survive
such direct attempts. Hell, I would like my landline calls to have
that sort of protection. I like privacy.

That is not really a contradiction to monitoring rf signals. Not at
all. People use expensive equipment to listen to pulsars which really
have nothing interesting to say. What we do is not any different. In
fact, what scanner enthusiasts do is a valuable service. Think about
it. If hobbyists can gather information based on monitoring rf
signals, so can ``bad people''. The hobbyist will advertise the
weakness in the system and that weakness can be fixed.

Besides, the airwaves are a PUBLIC resource. They belong to the
people. It is just plain silly to say you can't monitor the
frequencies from x to z. It's worse than that. Such a law is a
precedent for other arbitrary restrictions on harmless activities.

I sense that I have rambled incoherently long enough now. I will just
say clear and be off.

As I remember, Eden Prairie used to have an EF Johnson analog system, but this was way back in the early 90's. They've probably gone digital now but from what I've heard from you, they still use that analog stuff a little bit.

With compact computer power being available (ie the PalmV by 3COM), it seems to me that scanners could, and should, be made with programmable DSPs that can be linked in the same way as the PalmOS based hand held computing devices. These things have real computing power. With a general purpose CPU and a programable DSP in a scanner using the PalmOS or some other suitable RTOS, a handheld unit can be made that can keep up with technological advances and changes in protocols. My PalmV only has 2MB of SRAM. Other Palms can hold up to 16MB with add on memory chips.

Sure, such a unit would cost something like $500 or so with today's technology, but the prices could fall quickly if the production rate was high enough.

The number of accessories for the PalmOS based hand held computers is staggering. There are GPS attachments, maping databases, cell phone modems, you name it. Scanner technology and hand held computer technology can be combined into a flexible and compact package that can be programmed by anyone with the incentive and skill to keep up with the changes. You don't have to dump a scanner in two years because it can't do x. You just uplink a program to give it feature x.

I can't possibly be the first person to think of this.

Oh, and digital signals can be decoded as well if they aren't encrypted.

Actually, although it is digital, there is nothing to believe that
it is encryption, rather than just plain digital.

Just because it is digital, does not mean that it is encrypted.

So I should pretty much just take the the thing back, bid on an ebay item and sav myself a couple hundred bucks.

Is the BC-780 supposed to be able to track Multinet? I know it's supposed to do LTR, but I don't remember seeing anything about Multi.

Thats is what happens
It get scanned off the trailer by hand then goes into the automated funhouse
Then in a trailer buried under 1000 pound of cheese from Wisconsin in a huge
hydraulic sorting carousel.
The scanners miss the banged up barcode
Then you radio gets loaded into the wrong trailer going to the wrong part of
the country.
Found by a human and sent back via air to the destination hub with a new tag
or note.
No updates or info on the whereabouts of your package (its lost) UPS on the
phone says dont know *it could still show up*
we wont trace until 3 days past the due delivery date
You get a smashed radio then the inspector say improperly packed or non OEM
shipping material

CACH= Chicago Automated .....*something something* anyone know ?
I tried to get an answer but all calls are monitored for *quality control*
so customer service does not like answering that question

The PRO 2067 is IDENTICAL internally to the PRO 92 in the major circuit boards.

There are pictures and commentary on these on the web. I believe there is a pointer at 'Strong Signals site to the latest batch of photo's.
The point is that except for the relatively huge 2067 case the boards are all Pro 92 hand held scanner size. <wink>

GRE merely repackaged the PRO 92 into a larger case!

That is why there could be no question about a newer firmware version of the PRO 92, the PRO 92A, GRE had already been there and done that when they made the PRO 2067.

BUT there are numerous negatives about the newer PRO 2067 that have already been discovered. Many of those that populate the Multitrack Trunking System board that have bought this GRE radio intend to buy the much better Uniden BC 780 XLT this fall and to be done with GRE's failed attempts to bring a decent trunktracking radio to market.

The irony is, there are very little amount of people on the old 800mhz cell
frequencies anymore compared to the massive majority which have moved up
to much higher frequency which are not blocked from scanners but are digital
transmissions that are encrypted.
So, we spend our hard earned money on scanners that have been crippled in the cell bands,
just so those cheap bastards that still have outdated cell phones can talk while driving
and run
us off the road.

True to form! John, you can't quit lying long enough to use your own real name! You're same the petty minded, venomous little cretin who used to threaten myself and others and create malicious interference over the Lake Tapps Repeater when you drove up to the Seattle-Tacoma area. Just like now, you did so from a conveniently "safe" distance. You're a pathetically sad case of humanity and one can only guess as to what kind of demented abuse you were subjected to in order to create the totally worthless bit of human detritus you have become. They tell me you are now in trouble with local law enforcement agencies (whether for the first or umpteenth time isn't clear) and from administrative agencies over your ham license. To top it off you seek to abuse and harass the family of a dying man with whom you had a juvenile squabble many, many, many years ago. In one sense it is sad. Sad that others have to endure your filthy gloating over their loss of a loved one. Sad too, that users of this news group have to endure your continued presence. If the stories are true, perhaps some legal action will result in your removal from this and all the other news groups that where you've practiced your sick, twisted and tormented harassment over the years. You are detestable excuse for humanity and one can only hope there is some kind of cosmic justice that will visit upon you as cruel and heinous treatment as that to which you so gleefully subject others.

I did NOT vote for Clinton.......besides the simple fact that the
citizen vote does NOT elect the president.

> We cannot and have not effected any change for the positive whining on
> newsgroups which are supposed to be for technical discussion of a
> particular hobby.

I was under the impression that it was for the discussion, PERIOD, not
just technical, and I see the discussion, barring attacking one another, to
pertain to changes in laws governing our rights to listen to what's being
broadcast through and into our homes, in addition to pointing out the trends
of removing other rights to do things we used to be able to do,
firearm-wise.

"D Stark" <dave@nf2g.com> writes:

' I was with you until you mentioned the "right of assembly" in connection
' with monitoring. I believe that we have a First Amendment right to monitor
' and divulge government radio communications, but not from the Free
' Association clause.

The right of assembly would apply to HAMs rather than scanners. Call
it a slip of logic induced by lack of sleep and too much coffee.

I could also have been far more brief if I just said, ``we are doing
this to ourselves.'' As Walt Kelly said in a Pogo cartoon, ``We have
met the enemy, and he is us.''

All rights, whether you like them or not, are connected. Once you
give your government permission to rob you of any right, you have
given it permission to take the whole lot.

In article <O5LDYVA9$GA.288@cpmsnbbsa09>,
Why spent a lot of $ on another scanner for this? You can buy a PRO-510XL for appx $40 to do this and get all 40 AM channels. It works fine.

"PyratePete" <PyratePete@email.msn.com> wrote:

PHHHHhheeeww, that certainly was a large heap of anger and paranoia
all lumped into one paragraph!

I think it's time you left the good Ole USA and went down to Cuba.

We're not perfect, but still the best damn country in the world, where
you have the MOST freedom to do what you want, when you want.
Instead of ranting in a SCANNER technical group, do something to make
change. Vote the bums out that enact the silly legislation you are so
paranoid about.

To sit and berate me for my opinion, is also "typical" of someone
desperately losing a most silly debate. However, I will defend your
right to say it freely with my life.

Dan

1403. What has happened to Radio Shack??

Newsgroup: rec.radio.scanner
Date: 2000-07-23 00:00:00 UTC
From: Dave Lewis <dave@aaa.lanstar.net>
Message-ID: <dave-D67326.00373923072000@news-server>
Source record: 84267

I could not believe this happened to me today. I have been scanning for a number of years. I have a friend who enjoys going to a smaller airfield with me every couple of weeks and parking not far from the runways and listening to the air traffic. He does not live far from the airport & thought it would be cool to have a scanner to listen to the traffic any time he wants.

We went to a local Radio Shack in a mall here in Cincinnati today to buy an inexpensive scanner for him. We saw one for $89.00 that had all the features he would need and give him a taste of scanning. The idea being, enjoy it and see what features he may want later on then upgrade down the road. He clearly does not need or want a 245XLT like I have at this time as he is completely new to this.

The salesman kept talking about trunking and how he must have it. Funny, since Cincinnati city & county PD & Fire are not trunked right now. There are a very few but for his needs trunking is something he would never care about for a long while. The salesman went on to explain how he could program in 4 freqs and be able to rob any bank right now and get away. Funny, my friend is not planning that either. He just wants to get air traffic and some public service. I played along at this point & told him to make a deal on the PRO-92 then. The salesman asked me what that was. Yes, he asked me what the PRO-92 was. After making an ass out of himself talking about how to scan and how important trunking is with a wery poor explination of trunking, he did not know what scanners he sold or what their features were, even though they were not 2 feet from him. He even asked me if I was testing him. NO, I want to buy this scanner with these features for $89.00. Needless to say, he told me to have a good day & walked away.

I could not believe this. I came in to BUY something. I saw what I wanted to buy & planned to walk out with it. Instaed, I was insulted & talked down to by a person who had no idea what he was talking about.

I remember a time when you walked into RS and there was a salesperson with their ham call sign on their name badge. They would walk you through buying anything you wanted & explained how to use it.

Sorry, I just had to vent. I hope this is not a sign of things to come here in Cincinnati.

Best regards,

Dave

Political Correctness should be stamped out wherever it appears.
This attitude of - hide the truth - it doesn't belong here - is what's gonna submit this country to the totalitarian rule of the Dollar. Look at the ECPA - Bought and paid for by the Cellfone people, who wouldn't even admit in a Congressional investigation that Cellfones ARE Radios - but since they got the big bucks- they can trample on our freedoms. They are being Politically Correct. I see nothing wrong with the Communications Act of 1934, as it was intended. If you hear it, don't tell it. Was OK till the big bucks people came along....and their Lawyers .
Scanner people are a small minority in this country, and the press can beat us up as much as they want. It's the PC thing to do. The politicians in Washington can do the same thing - it's the PC thing to do, and it keeps the big Cellfone $$$$ coming. The media can make big Headlines at our expense, it's the PC thing to do,and it sells more papers/magazines/TV commercials.. and the big $$$ keep coming.
If we just hide our head in the sand, and say that publicizing this - in a group of Scanner users- is not the PC thing to do, aren't we just killing ourselves??

Bill, N3DDY
--
Political Correctness is nothing but Tyranny with Manners....
The PC individual should be reminded of this from time to time -
lest he learn the EXACT value of his opinions.......

A little over a day left for this auction. Not one bid yet. $100 is really all i'm asking and i'll pay shipping. Either bid on there or we can do this off ebay. Post your offer on this scanner if you want it. I reallllllllly need money. This is a good mobile scanner or use it via a base w/ a ac/dc adapter.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=385040437

Thanks,
Scott

Blake,
I made the assumption that they are not running two systems in parallel, one analog and one digital. Therefore, I decided they were probably using some form of DES, such as Motorola's Digital Voice Privacy (DVP) or Ericsson"s Digital Voice Guard (DVG). I was trying to keep the answer as short and simple as possible, so I left out several key assumptions that I used in formulating my answer. I figured Michele wasn't interested in all the engineering details of the various possibilities.

From: David Steuber <nospam@david-steuber.com>
Message-ID: <m3vgxxfl35.fsf@solo.david-steuber.com>
Source record: 84273

My phone seems to emit rf on:

902.150
902.4875
903.250
906.4125
906.5875
908.755
912.6625
912.825
914.250
915.2125
916.175
917.125
917.1375
918.0875
919.050
920.0125
920.975
921.6875
922.8875

Not so sure about the last one. When they say spread spectrum technology, they mean it! My phone is also digital, so you get nothing but noise.

Testing was done by turning the handset on and off with the talk button. This was with my GE 900 Mhz Digital Spread Spectrum Technology phone.

It seems to jump around a bit too.

The frequency band seems to go into channels allocated for use by HAM. I guess if you really want to avoid these freqencies, you should program them into a bank and avoid scanning them. For digital phones you will get nothing but noise anyway. Whether you will pick up on phone conversations with analog phones is another question.

Strongsignals.net lists old fashioned cordless phones that come in nice and clear if the base unit is nearby. So far, I've heard nothing worth listening too on those bands.

My best entertainment so far has been on the 144-148 band.

No, it's just that I work in law enforcement and understand the constraints placed upon law enforcement officers. Nobody just breaks down a door and points guns around for no reason, whether or not they be the local police, county sheriff, or FBI. If they did, they would quickly find themselves out of a job. Simple as that.

> Sometimes that reason is, ``I got a gun.''
>

Sounds like a good reason to me. Unfortunately, law enforcement officers rarely know what the intended purpose of that gun is. Until they know, they have to protect themselves from any possible harm.

Here's a scenario: Officer Smith & Jones respond to a report of a prowler at such-and-such address. On arriving at the address, they see a man on foot around the residence. The man also has a pistol in his hand. The officers order the man to the ground at gunpoint. Once on the ground, the pistol is secured and the man placed in handcuffs. Once the situation is secure, only then can they ask questions. And only then do they understand that the man they have in custody is the R/P (reporting party) who decided to look for the prowler on his own (armed) after calling 911, unbeknownst to the officers.

Are the officers jack-booted thugs of a police state? No, they just want to make sure they go home at the end of thier shift. Are they out to intimidate the homeowner just because he owns a gun? Of course not. They simply didn't know who this armed person outside the residence was.

Happens all the time.

But I'd hardly call the US a "police state."

That should never ever happen. The man should have told 911 that he
was entering the theatre and gave a description of himself so the
police would know who he was.

I guess it depends on where you live. Don't ever suggest that we are
not in a "police state" because you don't see it or you happen to live
in a better place than some others. A "police state" is easily seen in
some places, if the people don't have their head up their asses. Some
people don't see it because they approve of it.

Shouldn't, but does. People don't always tell 911 operators the whole
story.

Anyone know of any Palm OS based programs for use with a scanner? Frequency lists?

Thanks

1419. CELLPHONE CONVERSION

I have a old "bagphone". Can these be converted to ham freqs.?
Has anybody done anything in the way of utilizing these old devices
to something useful? Any websites addressing this?

Comments?

manny, K3 Nice Cold Beer

A good place compared to a Hitler ruled Germany or a Stalin ruled USSR. Yes given those three choices. What's your point?

Now, back to your ignorance about Idi Amin, Stalin and Hitler ruling Serbia. You don't get it do you?

Glenn

1421. Newbie needs help! Start scanning now? or wait for possibility of digital?

Newsgroup: rec.radio.scanner

Hello all.

I have been reading posts in this group for about a week now & have been researching all the different scanner models and decied to get myself a good scanner, as I am new to this hobby. I live in the north of detroit, Michigan area & am wondering if I would be wasting my money getting a scanner. I have read that the state police have gone digital, & that this will filter to all local police, fire, ems & the like. The scanner I was thinking about purchasing was cell capable, but even there, how much will there be to listen to in the near future? My mobile Phone is digital, & as far as I know, I don't even think you can buy a new plain old "cell" phone. I guess my question is should I save my $600 & wait for a digital capable scanner? or will there still be plenty of enjoyment for me with the Icom R-3 that I was planning to purchase that has a range of .5 to 2450 MHz. I don't know much about this hobby, but I don't want to spend money on a scanner & there airways go dead in a year. I'm sure all who read this can understand that Any input would be appreciated - especially from anyone that scans in my area!!

You can use longwire, dipole, sloper, etc. and other shortwave
antennas to receive HF weather (WEFAX) and other HF fax signals with
the right hardware/software demodulators/decoders. The M-8000, for
example, will do HF WEFAX just fine with a 66 ft. long dipole. There's
lots of info on SW antennas on the web if you search around. Good
luck. That discone won't get you much with HF fax.

With all due respect, it's not as simple as that. Case of George Dartois comes to mind. Shreveport, Louisiana. Broad Daylight, his own back yard, shot and killed his daughter's boyfriend in the family swimming pool. It took 20 years and Senator J. Bennett Johnston to finally charge, and try him.

See, the Chief of Police had said, and this IS a direct quote, "As long as I'm chief of Police, no officer will be charged with harassment in Shreveport, Louisiana."

A policy which remains in force today, several Chiefs of Police later.

Mt neighbor was having a terrible time with his marriage. His wife left with their two children and he grew despondent, his visits to our house grew fewer by the week. Eventually he lost his job. No wife, no kids, no job. He began to drink to excess, eventually grew suicidal. He called 911, the police were dispatched. They arrived as he was exiting the front door with a unloaded shotgun in his hands. He was crying and quite agitated and in a drunken state. We watched from 50 feet away as one of the officer's pulled his gun from it's holster and said ONE word, "Stop!" Our neighbor stopped and was promptly shot (within 1 second) in the upper torso by the officer. He went over backwards and was dead when he hit the ground. No court, no trial, no jury, no judge, no lawyer, no justice. I rest my case sir.

I may not agree with everything the government does when it comes to law, but here in the USA, one can say almost anything
and not fear reprisal. Now, if you're going around threatening to kill the President, then your statements will be questioned.
The United States is one of the most open countries in the world, where you don't have to worry about what church you go to
what religion you practice, or what frequencies you listen to.
True, the US Government has some messed up laws regarding scanners, but no one ever said our government or country was
perfect. It is up to the people to take an active part in our government. Most don't give a crap.
On one cable system, C-SPAN was dropped because of "low viewership". And that, is a shame.
I don't understand what the big deal is about making scanners that have the cellular band blocked.
If someone is really intent on listening to cellular calls, they're going to do it and no law is going to stop them.
I forget what country it is, Britain? You're not allowed to watch TV without paying for it. Imagine that.

> > > > > If that's what you really think, that we are a "Police State",

I agree, anyone that doesn't like the USA should find someplace else to live.
Our welfare system is overcrowded with people that came to this country, don't want to work
and think the USA owes them a living. Anyone that badmouths the USA should leave.

> > > > > I can't believe I defended this country for pussies
> > > > > like you.
>

I was never able to serve, but I have the utmost respect for the men and women that have
served in the military to defend our democracy and freedom.
Many have died, some came back crippled or maimed, and many are MIA.
How do we pay back these heroes? We leave many of them homeless and destitute out on the street begging for a quarter to get some food. That is also a shame.

Ask an 18 year old today to serve in the military and he'll probobly laugh in your face.

> > > > Hey Bill. Neither Hitler, Stalin or Idi Amin DaDa ever ruled Serbia. Are
> > > you
> > > > really that dim or just unable to follow along???

Don't bother, most people today don't care about history.
Most people will never know the horror of war, or the atrocities committed by people like Hitler.

Still think the USA is a police state? Think about it next time you're walking down the street
with your scanner.

My apologies if some things were off topic.....
I leave you with some interesting reading.....

For one reason, the range would be extremely limited. The rubber duck antennas
on handhelds are extremely inefficient at frequencies as low as 27Mhz CB.

This was your first mistake. Don't buy ANYTHING from Radio Shack which
requires input or a technical opinion from the "salespeople." RS is great for
fuses, adaptors, solder, etc...but anything above that level, forget it.

Their scanners are also generally way overpriced.

My PRO-2066 seems to lack the 800 MHZ sensitivity of an
adjacent BC-895XLT, using identical antenna.
Any hints on a decent pre-amp would be appreciated.
Sensitivity on other bands is fine.

My symptom is: hard time finding the data channel, in
trunk tracking mode, squelch at about 11 o'clock

Try scannerworld.com

They have the Relm (Regency) Electronics Scanners. They pick up the CB band, and are the only ones I know of that do, except the expensive AOR scanners. Models HS-100 and HS-200 are portables. MS-100 and MS-200 are base units.

> Must have been UFO's in Vietnam.
>
Just what makes you an expert on how the government and/or the military classifies things? I have an older brother, now retired from the military, who still isn't allowed to discuss what he did while serving in the army in W. Germany in 1965-66. While the reason for the classified rating may no longer be valid, the fact that it is still classified is real. The government works that way. And after you sign the papers swearing to keep secrets, you're not given the option of deciding which ones are no longer valid.

Looking at my block sender list, and over half the names are some version of Mackey, Mackie, etc. Here's another idiot to add. Bye-bye jmackie1860.

Some of us go to a scanner newsgroup to read about and discuss
technical issues relative to the scanning hobby, Yet, at keast 75% of
the drivel posted has absolutely nothing to do with scanning,
Including the horseshit which started this thread.

It's got nothing to do with being politically correct.

No one is hiding his /her head in the sand, as we've all been subject
to this anit-government paranoia about scanners and guns for years now
as nauseum...and nothing has changed.

Lets get back to radio talk...

Yes and I think you have a discone with the extra vertical
element giving better low VHF and 11-meter performance. That is
the one I was referring to.

BTW...They look like really nice antennas at a very reasonable
price.

> Was this murder performed in the line of duty?

No. He was pissed because the kid had been doing his daughter.
Shot him cold dead in the back yard. In front of witnesses.

> It took 20 years, but they
> finally did bring him to justice.

And you and I both know that had this been done by anyone else,
that he would have been arrested and charged that day. He was not.
He wasn't charged and brought to trial for 20 years.

And that's the point. The kid wasn't guilty of a crime. And he
wound up on the wrong end of a service revolver. Just because a
police officer points his weapon at you, doesn't mean he's justfied
in doing so. And doesn't perforce indicate guilt, as was implied by
Mr Bryant's post.

And if you genuinely believe that 20 years between the commission
of a felony murder, and the filing of charges is acceptable due
process in the case of a police officer, then you've just made
another prior poster's case for him.

From: MooNPuP <lisciotti@my-deja.com>
Message-ID: <8lfjefbbq1@nnrp1.deja.com>
Source record: 84315
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have a PRO-91 and have followed the directions to the letter on how to program a preset/custom fleet map to no avail. It seems that when I get to Step #3 (press the DATA button) all it does is give me the dreaded error beep.

No matter what I do or how many times I re-read the directions, I get the same error from Step #3. Is the Radio possibly "broken" when it comes to this function or is something wrong in the printed documentation?

Thanks for any help...

Next thing you know, the Cheek-suckers will be excoriating me because I say that Charles Manson is a dangerous psychotic.

The simple fact is that Cheek was an asshole. Now he's a dying asshole. Eventually he'll be a dead asshole.

Now, I'm not particularly happy about that fact. I don't wish that sort of suffering on anyone. But I'm not going to get all weepy about it, either, particularly when there are plenty of people far more deserving of my sympathy.

The record here speaks for itself. I could re-post some of the evidence, but I have better things to do. Almost every Cheek sycophant who responds to me lies about that record in some degree. The only good thing about that is that it gives me a chance to update my killfile. All Cheek-Alikes, all Mackey attackers (and Mackey himself, of course), and any other shit stirrers on this topic get an immediate PLONK. The only ones who get read are the small handful of people who stick to the facts of the situation. It makes reading this forum a hell of a lot easier.

Source record: 84319

I called several RS stores in my area (St. Louis)regarding the updated Pro-92A. Most of them did not have the slighest idea what I was talking about. However, one store manager, who had no new versions, suggested that I check with them about a day before or on the last day the sale ends. Sometimes they extend the sale. However, IF it looks like the sale is not going to be extended he suggested that I buy the current version, assuming they have any in stock, at the sale price. When the new version does come in just exchange them. Makes sense to me.

Also,. would someone be kind enough to let those of us who don't know,
what the differences are between the 92 and the 92A?

Thanks!!

This is a real nice condition receiver.It covers vhf and low band am and fm.This is when they where made to last.It is a collectors radio.I have no idea what the radio is worth,so make a resonable offer with shipping.This also goes 117 volt ac or 12 volt dc.It also has a crystal in it for 152.19 and an empty slot for another.This is manual or crystal also.

Go to www.memoware.com and select the communications directory. Frequency lists are available for well known channelized bands (FRS, CB, Marine, etc). Programs are also linked from the site so you can view these files or make your own.

Hope it helps,
-Brian

Digital transmissions where I live means MDT (mobile data terminals)
where the officers can send typewritten messages to each other, or
dispatch can send "data" transmissions to officers with details on
their calls, or secure info like codes to enter secured buildings.
This info is sent as "digital" typewritten info, not voice sound waves
so it would be very expensive to receive these at home, although I'm
sure it could be done.

The only big expense associate with monitoring MDT's is your legal fees if you get caught. It's a gray area, as they state, it is illegal to decrypt encoded messages, however, a lot of "digital" systems are not "encrypted", they are just digital, and using a digital to analog conversion is not deciphering an encrypted signal by definition...unless you're part of a legal system that doesn't understand the differences, and doesn't have to, or want to!

When you use a computer modem, on the internet, you are converting digital transmissions, to analog...is that illegal? What about using a digital telephone? Damn...I shouldn't give them any more ideas...next thing you know, all that will be illegal too!

New York Scanner Law

McKinney's Consolodated Laws of New York (1996)
Title III - Vehicle and Traffic Law
Article 12 - Other Provisions
Section 397 - New York State Vehicle and Traffic Law
pp. 567-568
(w/Notes of Decisions added from 2000 Supplement, p. 37)

s 397. Equipping motor vehicles with radio receiving sets capable
of receiving signals on the frequencies allocated for
police use.

A person, not a police officer or peace officer, acting pursuant to
his special duties, who equips a motor vehicle with a radio receiving
set capable of receiving signals on the frequencies allocated for
police use or knowingly uses a motor vehicle so equipped or who in
any way knowingly interferes with the transmission of radio mes-
sages by the police without having first secured a permit to do
so from the person authorized to issue such a permit by the local
governing body or board of the city, town or village in which such
person resides, or where such person resides outside of a city, or
village in a county having a county police department by the board of
supervisors of such county, is guilty of a misdemeanor, punishable by
a fine not exceeding one thousand dollars, or imprisonment not
exceeding six months, or both. Nothing in this section contained
shall be construed to apply to any person who holds a valid amateur

radio operator's license issued by the federal communications commission and who operates a duly licensed portable mobile transmitter and in connection therewith a receiver or receiving set on frequencies exclusively allocated by the federal communications commission to duly licensed radio amateurs.

Historical and Statutory Notes

1980 Amendments. L.1980, c. 843, ï¿½ 90, eff. Sept. 1, 1980, in sentence beginning "A person, not" substituted "police officer or peace officer, acting pursuant to his special duties" for "peace officer".

Effective Date. Section effective Sept. 1, 1967, pursuant to L.1965, c. 1031, ï¿½ 195.

Derivation. Penal Law of 1909, ï¿½ 1916; added L.1933, c. 405; amended L.1948, c. 183; and repealed by Penal Law of 1965, ï¿½ 500.05.

Rules of the City of New York

Radio receiving set permits, see 38 RCNY ï¿½ 7-01 et seq.

Notes of Decisions

Constitutionality 1
Permits 4
Purpose 2
Radio receivers within section 3
Seized equipment 5

---

1. Constitutionality

This section prohibiting the equipping of motor vehicle with a radio receiving set capable of receiving signals on frequencies allocated for police use was constitutional notwithstanding allegation by defendant that such statute represented infringement by State Legislature in area preempted by Congress. People v. McGee, 1978, 97 Misc.2d 360, 411 N.Y.S.2d 514.

2. Purpose

Rationale behind this section prohibiting the equipping of motor vehicle with police band radio, the knowing use of motor vehicle so equipped, and the knowing interference with transmission of police radio messages was to prevent criminals from listening to police broadcasts in their automobiles, either prior to or after commission of a crime, and to prevent jamming of air waves during police broadcasts. People v. McGee, 1978, 97 Misc.2d 360, 411 N.Y.S.2d 514.

3. Radio receivers within section

Mere possession by defendant of scanner that could be reprogrammed to receive police communication frequencies was insufficient to warrant

indictment on charge of possession in motor vehicle of radio capable of intercepting police communication frequencies, in absence of evidence that defendant's scanner could easily be tuned to police frequencies. People v. Garcia, 1996, 170 Misc.2d 543, 647 N.Y.S.2d 355.
Under this section providing that person, not a police officer, who equips motor vehicle with radio receiving set capable of receiving signals on frequencies allocated for police use or knowingly uses motor vehicle so equipped is guilty of misdemeanor, electroalert radar detector, which was designed to detect presence of radar beams so as to allow its user to avoid police speed traps but which could not receive nor transmit voice radio transmissions and was also incapable of translating any radio signals into comprehensible form, was not a "radio * * * capable of receiving signals," and thus use of vehicle equipped with such device was not prohibited in this section. People v. Moore, 1978, 92 Misc.2d 807, 401 N.Y.S.2d 440.
Radar-monitoring device was not radio-receiving set capable of receiving signals on frequencies allocated for police use, within the meaning of this section making it a misdemeanor to equip motor vehicles with such radio-receiving sets. People v. Faude, 1976, 88 Misc.2d 434, 388 N.Y.S.2d 562.
Where defendant had in his truck a radio receiver capable of receiving signals on a frequency allocated for police use when receiver was plugged into cigarette lighter socket, the receiver was "capable" of receiving signals, within this section making it illegal to equip motor vehicle with radio receiver capable of receiving signals on frequencies allocated for police use, even though receiver was not plugged in when defendant was stopped by police. People v. Verdino, 1974, 78 Misc.2d 719, 357 N.Y.S.2d 769.

4. Permits

The only counties where the board of supervisors may designate a person to issue permits for equipping and operating a motor vehicle with a radio capable of receiving signals on police frequencies are counties which have established a police department by county charter. 1975, Op.Atty.Gen. (Inf.) 311.
A local governing body or board of a city, town, or village in Monroe county may not, pursuant to this section, authorize the Law Enforcement Council of Monroe County to issue permits for the equipping of motor vehicles with receiving sets. 1975, Op.Atty.Gen. (Inf.) 104.

5. Seized equipment

In the absence of specific statutory authority, a radio seized by the police in connection with an arrest and conviction for a violation of section 397 of the Vehicle and Traffic Law is not contraband and may not be retained, destroyed or rendered incapable of receiving police frequencies but must be returned to its rightful owner. 1976, Op.Atty.Gen. (Inf.) 255.

Excuse me? Plenty has changed..... Go out and buy a scanner. Will it pick up every frequency possible, or have there been changes that limit what you can or can not receive/listen to? Try and order a rifle through mail order like you could 20 years ago. Can you do it, or has that changed too? Go down and try and buy a handgun without filling out several forms, and then try and talk the owner of the shop into letting you take the gun you just bought home with you, without waiting for the government to decide if they want to let you have it or not. That sounds like a change to me, didn't used to be that way. Try and carry your legally purchased handgun without going down and explaining to a government official why you think you should be allowed to carry your own property with you when you go out in public, and having them give you a little piece of paper that says it's ok....again after they have had time to check you out and decide if they want to allow you to be able to use or even carry your own property. Up until 15 years ago the state I live in had an open-holster law. As long as your handgun was in plain sight and not concealed, you didn't need any permit to carry it. Not anymore. Sounds like a change to me.

See a pattern here, Daniel? Fewer and fewer rights allowed to public citizens in this, the greatest country in the world. The limits that are placed on firearms are also being applied to scanners, and anything else that those in power feel we shouldn't be able to do.

Things always change, Daniel, and rarely for the better. If you don't see it, then I feel sorry for you.

Many cops fear folks knowing, and especially recording, what they say and do. Occasionally you will get a clue to this in the various cops programs on TV. If they see a knife, gun, scanner, etc. they will show real close-ups of those items, and possibly show them more than once, as well as commenting on them. Can you imagine their reaction to a camcorder?

I had one get royally ticked because I asked for his name. It was night and when I moved so I could get the light reflecting off it right he accused me of threatening him by getting his name. Perhaps he was right. It may seem a threat to some of them to have folks know their dirty deeds.

Source record: 84342

I'd like to remind you that the Pro2067 is an all-new scanner like the Uniden-built Radio Shack trunktracking scanner was last Xmas. The Uniden had major sensitivity problems, unlike the Uniden-built RS handheld scanners.

My guess -an owner of the Pro92A!!!- is that RS cut corners on their new base, but NOT the Pro92. Both radios should be just fine for trunktracking, but I wouldn't be surprised if cost-cutting means junky front end selectivity in the 2067.

Please don't trash-talk the Pro92A without trying it yourself.

You may just find that it's the best thing out there now. Great conventional scanner, great trunktracker (finally), great features, and -for the next week- great price!

You're right. J.Edgar and his bunch abused their power. And
individual cops acting today do face the firing squad media. But the
abuse has been institutionalized. Not so much the individual
officer, or department acting on he fringes of the law, but the law
having been evolved to restrict basic freedoms in ways not conceived
50 years ago.

In the police state, it's not the police that drive the abuse, but
the system that supports them.

Like I said, we aren't exactly a Police State as are other nations
on this earth, but we are nowhere near the bastion of freedom that
we were 50 years ago either.

Yes, streets. Does that somehow confuse you David? Wipe the stuff out of your eyes and try again.

Okay, would "OUR" streets sound better? My neighbors and I have taken ownership of "OUR" streets and done quite well without guns. We all deserve to be safe on OUR streets David, without some Heston Moonie playing dirty Harry, a criminal supplied by a Heston Moonie shooting up the 'hood or in reality, some 12 year old with the proud NRA's members gun retrieved loaded from the nightstand accidentally killing his friend or the neighbor across the street. If guns made the streets safer, crime would have been hard pressed and on its last leg by now. It's not but Hesston's hero's are still supplying the criminals with guns as fast as they can lose them. The recent school shooting, many with arms supplied by your proud NRA gun owners and carried out by their well trained shooting children. Yeah, Kip was a great shot at a young age. Wonder if dead Dad was a proud NRA member? If there had not been a gun on Weavers property nobody would have died.

Guns have never scared me, owned a few and shot many. See, I was born in the country. Had a .22 rifle at about 10 or 11. I have hunted bear to quail. Guns don't scare me. It the careless morons, red-neck crackers and North Idaho idiots that own so many of them that scare me. I would rather give up my guns then let these folks continue to be armed.

Guns are cool, people aren't. That's the problem.

..and behaviors by the citizens that would have never been tolerated 50
years ago by society. We also were blacklisting Reds, secretly spraying
chemicals and biological agents on our citizens. Using blacks for guinea
pigs and soliders as radiation test dummies.

See above. Also look at all the politically correct crap that drives legislation and our representatives. Look at our penal system, and tell me about a lack of freedom, FOR criminals. Look at the judicial system, civil and criminal and tell me these folks have lost freedom compared to 50 years ago. I don't think so.

I know people with ten times Cheek's expertise. They just have better things to do than hang around UseNet insulting people and pretending to be some sort of radio guru. As for his books, I've heard some fairly substantial rumors to the effect that he stole a lot of the ideas for what went into those books. Be that as it may, it hardly justifies all the crap he dished out around here.

>never seen anyone..with more tech input than cheek.As far as Mackey goes
>I think he would be great for target practice.

You know, as much as I despised Bill and all his antics, I believe I'd kiss his rotting ass in public *IF* it'd mean the end of all the godddamn CheekSuckers trying to keep this literally DEAD issue alive after all this time. I stopped my own debates with Bill long ago, and I've pretty much stayed out of the battles since then. I killfile every rabid poster on either side of this issue on sight. And yet nearly every day, I see at least one post praising Cheek and/or attacking anybody who dared to point out that the man was deeply flawed as a human being, no matter what he may or may not have done for the scanning hobby.

I've been all over the UseNet and the BBS nets, and without exception, the Cheek crew are the nastiest, most mean-spirited bunch of chickenshit lusers I've ever had the misfortune to come across, and that's saying quite a bit, considering that some hams are nearly as bad.

When I was debating Cheek, I never stooped to his level. I never used bad language, I never called him names, I never directly insulted him. All I ever did was deal in the facts, and question some of his erroneous comments.

For that I was the recipient of a constant stream of vitriol from Cheek and his ilk. For Sale messages were forged in my name, my ISP got a long string of complaints, and I received my first and only death threat from either Cheek or one of his followers.

Now I'll get a bunch more shit for merely pointing this out, I'm sure.

Some of you people need to get a new hero. Cheek's dead. Let his rep die with him. Continually stirring up shit here won't do him or his family any good. As for Mackey, if you ignore him, he'll go away.

End of rant.

You mean you actually got an english speaking RS salesman?

I remember around 10 years ago, when the job market was tight, you
needed a college degree to manage some retail stores. Now, if you
speak english, you are in, no questions asked.

What freedoms?
Here is the bottom line:
Why do you need to legally listen to cellphones with your scanner?
Why does anyone with a life need to listen to cellphones?

Tell you what, get a life, and you too could be having cell phone sex
with your girlfriend. You could even record it, and pretend it's
someone else!

I'm not really sure about this. I've got a 895xlt and I seem to be picking
up more cellular.

I think it might be "electronics aging". Like electronic stuff wears out?

Don't know, but its sort of wierd.

Yep ol Bill was a good guy man. Corresponded with him quite a bit over
the years and always found him to be helpfull,knowlegable and straight
to the point. Books he wrote were very insightfull and thought
provoking.
Theres been so many rumors about his impending,and actual death though
that I think I'll wait for the next edition of MT till I belive it.
If true may he rest in peace.

I have a PRO-39 Realistic.

Page 15-16, of my manual:

Programming the Scanner

Follow these steps to store frequencies in channels.

1 Select a channel to program by pressing MANUAL, entering the channel number you want to program, and pressing PGM.

PGM appears on the display to indicate that the scanner is in the programming mode.

2. Enter a frequency.

3. Press ENTER to store the frequency.

If you made a mistake in Step 2, ERROR appears on the display. Press CLEAR and repeat Step 2.

4. If you want the scanner to pause 2 seconds after each transmission before scanning to the next channel, press DELAY until DLY appears on the display.

5. Repeat Steps 1-4 to program more channels. If you want to program the next channel in sequence, press PGM and repeat Steps 2-4.

your welcome

xman Charlie

My thoughts and prayers go out to Cindy and all of Bill's friends. Bill will truly be missed. He may have had a difference of opinion with some people on the newsgroups, but he contributed a vast amount of knowledge to our hobby.

May he rest in peace now that the pain and suffering are over. Hopefully the government will now leave his family alone.

For sats in the Clarke belt you can use prime focus dish antennas. For
polar orbiting sats you can use turnstile antennas, quads (QFH), yagi
arrays, etc.
You have to specify what you're trying to receive: frequency, sat
type, etc. The kind of antenna really depends on what you are trying
to do, where you are located, etc.

Hi.

Morals do not depend on one's religion......
Maybe he is a Hindu or a Moslem or without any religion. Some
simply don't care on ANY morals....

It would appear so. However, to have a law invalidated takes large amounts of money and time to get through the appeals process. To start appealing, one must first establish legal standing to pursue the case by being convicted.

1526. FS: Uniden Bearcat BC60XLT-1 Handheld Scanner

Newsgroup: rec.radio.scanner
Date: 2000-07-24 00:00:00 UTC
From: Walker <WorldvistaNOwoSPAM@hushmail.com.invalid>
Message-ID: <iXl8Of8MzAA28DewVzYRtTEtAysQ@4ax.com>
Source record: 84161

For Sale - Uniden Bearcat BC60XLT-1 Handheld Scanner. Mint condition, barely used (maybe only a few hours total). 30 channels, 10 bands, very easy to operate (a plus for any scanner). Includes one-touch weather and "chain search" range banks for finding new frequencies (makes up greatly for the relatively small number of channels). Takes either NiCAD batteries (recharges while in scanner), standard alkalines, or use it with just the AC Adapter.

Here are the bands this scanner covers:

29-29.7 MHz (10 meter Amateur band), 29.7-50 MHz (VHF Low), 50-54 MHz (6 meter Amateur band), 137-144 MHz (Military Land Mobile), 144-148 MHz (2 meter Amateur band), 148-174 MHz (VHF High), 406-420 MHz (Federal Government Land Mobile), 420-450 MHz (70 cm Amateur band), 450-470 MHz (UHF Standard) and 470-512 MHz (UHF "T" band).

For a picture of this model, check here:

http://www.grove-ent.com/BC60XLT1.html

This unit comes with the AC Adapter, manual, and antenna. This is a new model scanner (still being manufactured), not an older model.

$50.00 plus shipping ($5.00 standard, $7.50 insured (recommended) or $10.00 UPS ground), with a guarantee that the scanner will be working when you get it (return it to me for money back if it arrives DOA). I prefer Paypal credit card payments (http://www.paypal.com) but will accept a money order.

If interested, please Email me at core@zipcon.net before August 1, 2000. After July 31, the scanner is no longer for sale.

Thanks,

Tim

yes, its in the manual (Scanning Operation - Set the scan delay):

5SEC/10SEC resume automatically after 5/10 seconds, PAUSE resumes 2 seconds
after the signal disappears and is probably what you are looking for.

Glenn,

The Gov't has just passed a law requiring all firearms to be registered by 2003. However, many gun owners are outraged and refuse to register their guns. I don't blame them, I haven't registered mine yet. It's a stupid law anyway. It's just to appease all the city-folk who know jack -squat about guns. For example, how many criminals do you think will register their guns? It's only the law-abiding gun owners who will. I'm only 17, and I already hate politics and politicians.

Adam

What would the difference be ? if they bash each other`s heads in, then they
are just as dead as if they shot one another..... If they run each other
off the road and get killed, are they not dead ?
I think the "difference" is all in your head.... People have been killed
with kitchen knives, pickaxes, sticks of wood, and every other imaginable
item. the gun is just a tool, and can be abused like any other, whether it
be a shovel, crowbar, or whatever. If people want to thump one another, or
kill one another, they will surely find a way, rest assured.

The original discussion of this thread was WAY off topic, dealing with
firearms. Somehow, someone related the so - called "banning" of guns
to scanners, the ECPA, scanners being confiscated, and so on ad
nauseum. it is all quite amusing and sad at the same time.

Yes, I own this HT. I consider it a good choice, although I don't use 6m or 1.2 gHz much. Performs well on 2m and 440, but I'm in an area where 1.2 gHz isn't much of an option unless I go to NYC...and there aren't many 6m repeaters around here, although this may grow.

Bottom line is that it's a good HT, and I didn't make a mistake - solid build. If, however, you are a dedicated 2m Ham, go for something less expensive. If you are a new ham, get a cheap 2m HT - nobody on the other end will know if you're within earshot of the repeater. RS has a 2m rig going for $129 that received some good reviews.

I am quite well aware of the relevance of ECPA. I can't listen to
cell phone calls on a scanner any longer. Golly gee.

...and since I don't get a woody eavesdropping on people's private
phone calls, maybe I don't belong here.

DId all the whiining and complaining here STOP ECPA?

No.

Right, and they have...the majority are digital systems and systems
above 800 Mhz also digitally encrypted.

>The issues are both political and technical. Congress looked at the
>options (I hope) and chose the wrong solution.

They chose the easy solution, and one that would line their campaign
fund coffers. COme on folks, get with it....Money runs everything.

Rather than thinking that they are malign, I think they were simply
incompetent due tobeing ill-informed.

If you really believe that, I have a bridge in Brooklyn for
sale.....They did what the cell phone lobby told them to do , period.

Scanner makers should have testified before
>congress and stated flat out that the best solution to the problem
>would have been to implement scrambling in the cell phones.
>
HAHAHAHAAHA...thats a laugh. Scanners comprise such a small market
base for electronic retailers, they could give a rat's ass less about
scanner users. Radio Shack folded like a cheap camera under ECPA. it
was in their best interest, as all they are interested in selling now
are CELL PHONES!!!!

> Well I'd hardly call this a result of police action. This is something that
> occurred in this guy's private life, not as a result of him responding to
> the situation as an officer.

And that's just nonsense. Bullshit, actually, but I'll refrain
from saying that since you work for law enforcement.

The origin of this argument was an assertion that a police officer
only pulls his service weapon when justified. And that's simply not
true, this rather celebrated case serving as a single example.

Now you want to limit it to on duty incidents? The cases in
Chicago this year and last where motorists were pulled over and shot
dead by officers. One because she was armed with a cell phone.

My point has been throughout that its not just the guilty that
find themselves on the wrong end of a service weapon. There you have
two cases.

And your assertion, as with Mr Bryant's implication, that because
a weapon was drawn by an officer, there must be guilt of a crime, is
also nonsese. If such were the case, there would be no need for the
court system. Everyone drawn upon would be guilty, and that would be
that.
The fact that the court systems exist at all, are clear evidence
that an officer is not presumed to be in the right when a weapon is
drawn, and the victim is presumed to be not guilty.

> Just because this idiot was a police officer
> doesn't mean that all police officers are out to shoot someone.

That wasn't the argument.

> And just
> because he's an officer doesn't give him the right to kill someone, either.

You and I agree on this point. Clearly there are police officers
who disagree. George Dartois is one. I can name others.

> years were covering up the crime?

They certainly weren't working to pursue it, were they?
>

Let's get back to reality here. If he hadn't been a police
officer, witnesses would have not feared to speak. There were
eyewitnesses to the crime. If he hadn't been a police officer, other
officers would not have feared to pursue the facts of the case. The
officer was not arrested, nor was he charged, because witnesses
feared him. Because other police officers feared to pursue him. He
was a police officer, who, with impugnity, killed a human being.
Yes, it was because he was a police officer that he wasn't charged
with the crime for 20 years.
> >

> is an officer is beside the point.

It is absolutely NOT beside the point. If he had not been a police
officer, he would have been arrested and charged within an hour of
the crime. There were witnesses to the shooting. And neither they,
nor the officers of the force had the courage to stand up to him.
Because he carried a badge and a gun.

> If this incident happened the way you
> say, and judging from the guilty conviction it probably did, then he would
> have been wrong whether he was an officer or not.

True. But he was not pursued because he was an officer. Not
because he wasn't wrong, but because he was an officer of the law.
>
> >
> > And if you genuinely believe that 20 years between the commission

Murder is murder. In the line of duty or not, if he wrongfully
takes a life, it's murder, and the processes and the punishment are
the same. He wasnt charged because he was an officer.
>
> The bottom line is, there are good cops & bad cops. We can only keep

Then you admit that a weapon drawn is not an indication of guilt,
which was my point.
>

A whole bunch of Radio Shack scanners dimmed for a moment at noon Saturday.

Though the reasons will vary, the scanner hobby will miss Bill Cheek.

bummer :-(

Closer than 50 year ago?

I still am starry eyed and live in a dreamworld. I think the bad cop/ police state is even less of a threat then the days of J Edgar and bunch. The media is probably the most important link in keeping things out in the open. Its getting harder and harder for cops to abuse us without some reporter trying to make a story out of it.

My history with scanning is short. Where can I get a good biographical
account of Bill Cheek and his work, etc.? Sounds like real interesting
stuff from the bits I've read in this NG.

' the government knowing about your arms.
```

Nothing in the Constitution gives the government the power to
register arms. There is only one reason to register arms. Just ask
the British gun owners what that reason is. Ask the ones who were
ordered to surrender their registered handguns on pain of spending
time in one of the worst prison systems in the civilized world. A
prison system that may be as bad as the ones in the US.

' >Did we do anything to fight the legislation that required blocking
' >those frequencies? Did we propose counter legislation where cell
' >phones could be made secure by use of a scrambling system?
' >
' No, we were too busy whining and moaning about here and elsewhere.

Well then. It looks like we did indeed get what we deserve.

' Rather than thinking that they are malign, I think they were simply
' incompetent due tobeing ill-informed.
'
' If you really believe that, I have a bridge in Brooklyn for
' sale.....They did what the cell phone lobby told them to do , period.

If the cell phone lobby is all they had to go on, then they acted on
ignorance. If they knew that many receivers existed and were easily
imported that could intercept cell phone transmissions, then they were
stupid. If they thought that blocking the new receivers would solve
the problem, then they were stupid and ignorant.

If they did all the above with full knowledge of the real fix, then
they were indeed malignant.

Get your congress critter's voting record (assuming it wasn't a voice
vote), and decide if you want to keep it in office. The same applies
to your senate critter.

' The original discussion of this thread was WAY off topic, dealing with
' firearms. Somehow, someone related the so - called "banning" of guns
' to scanners, the ECPA, scanners being confiscated, and so on ad
' nauseum. it is all quite amusing and sad at the same time.
```

True, the original post was way off topic. It was even off topic in
rec.guns which is not a political forum. Being a moderated forum,
rec.guns soon had the thread disposed of.

However, prohibition in all forms generates discontent and creates
crime. It is all bad. You don't have to agree with me. I just hope
I can get a HAM license and setup before they ban that too.

dconti2@bellatlantic.net (Daniel M. Conti) writes:

' Some of us go to a scanner newsgroup to read about and discuss
' technical issues relative to the scanning hobby, Yet, at keast 75% of
' the drivel posted has absolutely nothing to do with scanning,
' Including the horseshit which started this thread.

You are correct in most respects. I read this group to learn about scanning, a hobby that is brand new to me. However, the post that started this thread was based in fact, even if it is totally off topic here.

' It's got nothing to do with being politically correct.

For some people it does. This medium is not good for figuring out what people really mean when they type something. There is no tone of voice and we certainly have different backgrounds when it comes to the effectivness of making connections that are only implied or the use of metaphors.

' No one is hiding his /her head in the sand, as we've all been subject
' to this anit-government paranoia about scanners and guns for years now
' as nauseum...and nothing has changed.

But things _have_ changed. Quite a lot. An example directly related to scanning is the fact that cell phone frequencies are now blocked on all new scanners. It is illegal to modify them to unblock the cell phone frequencies. I doubt you will get caught, but this is a federal law we are talking about. The feds do not parol people or hand out slaps on the wrist. They throw you into a deep dark hole for the duration of your sentence.

Other things have changed as well, but as they are off topic, I will refrain from mentioning them.

Look for a new version of the 92 to be out soon - look for catalog #
20-522A

Check the firmware version - if it is 3.25 or better - you wont have
problems.
it is the dame firmware that is in the 2067.

Go to www.pro-92.com for more info

Thats funny cause a package I sent last tues using Ground got to Cach, IL in 9 hours and the page said that until saturday and they change the date and time it arrived there - is that wierd??

<h@a.m> wrote in message news:39791F3C.B150DA23@a.m...
I would assume that people know what a "cache" is????

The dictionary says "A hiding place." It also says something "...hidden or stored in a cache."

Thus UPS has appropriately used "Cache", IL as a place to hide and store all our packages until THEY feel like doing something about finding out where they
are.

Ironic, isn't it?

' >
'
' Sounds like a good reason to me. Unfortunately, law enforcement officers
' rarely know what the intended purpose of that gun is. Until they know, they
' have to protect themselves from any possible harm.

Please re-read my reply. The reason that the *officer* aims his
weapon at someone is simply because he *can*. The ``I got a gun'' was
the officer's reason, not because some other guy had a gun out.

This is actually an example of a bad officer. I hope this is not the
standard accross the country. The last time I dealt with police, I
had a big rifle available, but the trooper never pulled his weapon or
even released the retention strap. Why? Because I removed my hearing
protection to talk to him and was obviously not threatening him.

The reason for the encounter was some neighbors complaining about the
noise. Ok, so a whole bunch of other cops started to show up, but the
first one waved them off as we were discussing the situation in a
civilized manor and no backup was required. I agreed to pack it in
for the day and the trooper left. I wasn't ticketed or charged with
anything because I wasn't breaking any laws.

Getting back to the topic of scanning, which is where we should be on
this group, even if it is the politics regarding scanning, I don't
think it is too late yet. But scanners and HAMs need a lobby just as
the gun owner's do. The airwaves are a public resource. The FCC
exists only to allocate frequencies for specific usages. As signals
can cross state lines, it is clear that rf emitting equipment is in
federal jurisdiction.

What we need is to get back the rights granted in the original act.
That includes the right to monitor *all* radio frequencies. If
parties want to communicate in private, they can use digital

modulations and encryption protocols that the hobbyist can't crack.

Cell phone manuals include warnings that their transmissions can be monitored by a third party. So do cordless phone manuals. It is incumbent on the user of the transmitter to insure privacy and to not say anything that he would not want overheard in a restaurant. At least that is my opinion.

A good analogy for the right to receive all rf signals is the right to hear all audio waves when one is walking around. Are there any places where you are required to stick your fingers in your ears?

Well, this is a good thing. We have lunatics on the road who will
pull over and bash each other to death with bats and machetes over who
cut who off....at the drop of a hat. Imagine if these lunatics were
all carrying guns?

> See a pattern here, Daniel? Fewer and fewer rights allowed to public

Anyway, DUH...what I meant was......with all the ranting and raving
about the government imposed changes you refer to, over these past
years, nothing has been done by YOU, (US) the whiners to change this
course of events. WE KEEP VOTING THE BUMS INTO OFFICE FOR DECADES AND
DECADES....SAME POLITICIANS!!!!

We cannot and have not effected any change for the positive whining on
newsgroups which are supposed to be for technical discussion of a
particular hobby.

Now, If you don't see it....I don't even feel sorry for you...

You misunderstand...what I meant was....with all the whining about it,
the changes went through, didn't they? Instead of whining off topic
here, do something about it where it counts. Vote the bums out of
office. Easier said then done...I know....

With regard to cell phones, we deserve exactly what we got in the
hobby. For years when cell phone capable scanners were legal, it
seemd like the only focus of scanning was to listen into cell phone
calls. We blabbed all over creation about how good it was. Boobs
heard confidentail material and disclosed it to anyone who would
listen. We brought attention to ourselves, and we got what we
deserved.

1579. Icom R-10 scan delay

Newsgroup: rec.radio.scanner
Date: 2000-07-24 00:00:00 UTC
From: smokkeyy73 <smokkeyy73@yahoo.com>
Message-ID: <k8Pe5.4384$ga2.112782@newsread2.prod.itd.earthlink.net>
Source record: 84227

Does anyone have a way to work around the memory scan delay on the Icom R-10. It is very frustrating that when an active frequency comes available that the R-10 will continue to scan after a ten second hold. Every other scanner I have had will stay on the frequency until there is dead air, then the delay will hold and then continue. Am I missing something here with the R-10 or is this just something I have to deal with???

Thanks

You're missing something. There definitely is a way to program the IC-R10 to pause like a normal scanner. Check your manual, it's in there. I no longer own one, and I can't recall how it's done. Possible someone else will contribute.

Well I'd hardly call this a result of police action. This is something that occurred in this guy's private life, not as a result of him responding to the situation as an officer. Just because this idiot was a police officer doesn't mean that all police officers are out to shoot someone. And just because he's an officer doesn't give him the right to kill someone, either.

>
> > It took 20 years, but they

> He wasn't charged and brought to trial for 20 years.
>

No, I don't. There are all sorts of murders that are committed where the perpertrators aren't brought to justice until many years later. Each case is different. If the reason for this is because his fellow officers were covering up for him, then the whole department is culpable. But do you believe that all the officers working in the department for the past 20 years were covering up the crime?

>
> And that's the point. The kid wasn't guilty of a crime. And he

> Mr Bryant's post.

Once again, this incident didn't occur in the line of duty. This is something which occurred in this officer's private life. The fact that he is an officer is beside the point. If this incident happened the way you say, and judging from the guilty conviction it probably did, then he would

have been wrong whether he was an officer or not.

>
> And if you genuinely believe that 20 years between the commission
> of a felony murder, and the filing of charges is acceptable due
> process in the case of a police officer, then you've just made
> another prior poster's case for him.

No, I believe in quick justice. Whether or not his being a police officer had any bearing on taking so long to convict him I have no idea. But had this occurred in the line of duty, I'd bet that he'd been in jail a long time ago.

The bottom line is, there are good cops & bad cops. We can only keep working to weed out the bad cops. Do they overstep their bounds sometimes? Yes, undoubtedly some do. But a complaint filed with your local PD, if valid, usually helps correct the problem.

But that is a long way from being a police state, which the creator of this thread maintains.

OK, in that case yes I did misunderstand.

> This is actually an example of a bad officer. I hope this is not the
> standard accross the country.

I have total agreement with you here. I don't believe this is the standard,
but I've only worked in law enforcement here in my part of the country. And
I can guarantee that if any officer around this area pointed his weapon at
someone simply because he could he'd be out of a job so fast he wouldn't
know what happened.

>
> What we need is to get back the rights granted in the original act.

Total agreement here. The ONLY way to ensure no evesdropping of your radio
communications is to either encrypt the signals, or ban any radio receivers
capable to tune those frequencies. It would appear that the cellular lobby
```

prefers the latter.

> Cell phone manuals include warnings that their transmissions can be
> monitored by a third party. So do cordless phone manuals. It is
> incumbent on the user of the transmitter to insure privacy and to not
> say anything that he would not want overheard in a restaurant. At
> least that is my opinion.

If you don't want your conversations overheard, don't use the phone. Or you could do like I did & get a digital cordless. However, I doubt most people give a second thought to it. To the general public, it's a phone and not a radio transciever. If these people were really interested in privacy, why do they insist on having cell phone conversations in airports & movie theaters?

> A good analogy for the right to receive all rf signals is the right to
> hear all audio waves when one is walking around. Are there any places
> where you are required to stick your fingers in your ears?

Not yet, but give the cellular lobbyists time! They'll probably get Billy Tauzin to come up with a law to make it illegal to listen to someone yakking on their cell phone while sitting next to you.

You need an antenna that has cross-polarized elements. It looks like a multi-element quad, without the wire loops. You can see what one looks like by checking around the dam at a reservoir.

To the people who have one, or have used one. Would you recommend this radio. What are you comments on it? Does it perform well on the SW bands, specifically in SSB? How good is its recieve while using the default antenna....? Sorry for the questions but I would like some extra knowledge before I shell out 320 bucks on a radio LOL.

I am highly thinking about getting one. I have been into scanners/shortwave since 1996 so I feel its time I get something really nice to reward myself ... I hear the AOR's are great scanners but they seem to be a bit more expensive :(

Thanks in advance,

Oh cool, I happen to have a dam down the street though I don't like going over it as it is high up
and the water below is deep. One of those phobias I guess.
Anyhow, you are correct, I've never payed attention to the antenna outside the little dam shack but
there indeed is an antenna mounted on a pole there.
I have seen sat antennas (non disk type).
The ones I was attracted to are the twisted helix type as I hear they are great performers.

The only reason I considered one is that it is a decent HF performer (better than the other handhelds out there) and it could be cell enabled with just a couple of 10K surface mount resistors installed.
I think ICOM caught onto this though and are now producing a different, non solderable type board now and most people aren't into mangling their radios by cutting traces and installing
components where they don't belong.

Construction and Physical
The radios construction is very nice. The numerous buttons on the radio are just big enough to work very easily. The text which describes each function requires glasses to be read if you're vision impaired. The speaker is located on the upper face with the LCD display below that and finally the 20 button keypad located at the face bottom. The function button, which provides a second feature for some of the 20 face button functions, is located on the radios left side with the CI-V and external DC power jack located on the right side. On the top of the unit are the antenna connector (of course), the SQL/VOL, tuning dial and external speaker jack. The plastic case is just strong enough to resist slight bangs and bumps with the radios weight and size a welcome sight (and feel). The LCD display (with adjustable contrast) is just about right, with the numerous functions, numbers and alpha characters being visible with a glance that requires not too much squinting. The belt clip (on the back) is a bit hard to use as it is not too flexible.

Features/Performance
The many features of the radio might overwhelm the new user and an "easier to operate" receiver might be what you need... but if you don't mind learning some new steps and you aren't too embarrassed about going back to the manual a good number of times for those not too often used functions, then the R10 is just right for you. If you want to listen to AM radio, FM radio, Police, Fire, HAM, Marine, TV, Short Wave and just about anything else and with a range of (U.S.) 0.5000-823.999, 849.0001-868.999, 894.0001-1300.0000 MHz and modes of AM, FM, WFM, USB, LSB, CW then the R10 is a good Communications Receiver to do this with.

Programming is a bit different if you're use to a basic scanner like the BC200XLT. Depending on which mode your in the programming requires a few more steps than usual but once learned it's a snap. Even easier is to use the software program that is available for the R10 (CS-R10).
Scanning is done within one bank at a time. No turning on/off different banks to be scanned is possible. This is probably the most frustrating feature and might be a good reason why you might not want an R10..... but as I said, the many other features make this radio a good choice even if only one bank at a time can be scanned. If you don't mind programming multiple banks with the same frequencies to catch all your requirements (mix and match), then this becomes a less problem sum item. The SKIP feature may be used, like a lockout of certain frequencies, to avoid channel you don't want to hear temporarily.

Searching can be done like any other scanner, with limits entered in as scan edge frequencies and the search , called PROG-S mode activated. Multiple PROG-S limits can be stored. Search direction can be change by turning the

tuning knob.

VHF/UHF Performance
I found the R10 receives the UHF/VHF range very well. I live about 25 miles away from a medium sized city which uses the UHF/VHF range (450-460 MHz & 154-157 MHz) and these signal come in nice and strong using the provided antenna. There is a good amount of hilly terrain between me and the city so the signal strength is greatly decreased once it reaches me... but the R10 pulls in those signals just fine. The S-Meter on the R10 makes it nice to see just where to place the radio to get the best signal strength too. The 800 MHz range works just as good too for those frequencies I listen to. I would say the R10 works on the UHF/VHF range as well or better than any of the other scanners I have owned.

MW & HF Performance
If you are planning to use your R10 as your sole AM/SW receiver too... that would ok. I found that the provided antenna is not the best for this purpose and a separate AM/SW type antenna might be a wise purchase. If you want to connect a long wire antenna to the R10 I found the SANGEAN ANT-60 portable shortwave reel antenna works very well. It can be carried around in your pocket and rolled out when needed. If a long wire is out of the question I've found the WATSON W-881 Super- Gainer whip pulls in the signals much better than the R10s supplied antenna in the MW/SW range. Not as good as the long wire but at a much better signal strength than the original whip. Overall I found the R10 was all the radio I needed to be carried on business or pleasure trips for all frequency ranges. If your into serious SW listening then a separate receiver with more features would probably be an asset... but the R10 could be used by the casual listener. I've got a few other SW receivers, analog tuning, for just that purpose but my R10 is used just as often for these bands.

BAND SCOPE Function

The band scope function was another one worth mentioning. It was fun to use when I was in the city. You enter a center frequency and watch other used frequencies that pop up above and below that entered frequency in a bar graph form with a higher signal strength showing higher on the scale . It was more fun to use than functional for me but I would assume others out there would find more useful applications for it. Maybe to find unknown frequencies while listening to a known one or finding a source of interference.

CI-V
The R10 is also equipped with a CI-V port allowing it to be programmed from a PC through the RS-232 port. It will also allow one R10 to be cloned from another R10. This allows all the data contents from one R10 to be transferred to another. The OPC-478 Cloning cable is used for both these functions. The Icom CS-R10 software package is used to connect the R10 to a computer. I've used this software and it is very easy. My R10 has gone through the computer data transfer routine a number of times with no errors encountered. I still like programming the old fashion way but use these software files as a backup in case I ever lose my radio memory.

Overall
I like the R10..... what more can I say ?

dconti2@bellatlantic.net (Daniel M. Conti) writes:

' listen. We brought attention to ourselves, and we got what we
' deserved.

Well, we got what we deserved, I guess. Certainly sharing confidential information from picking up cell phone calls is a very bad idea.

Did we do anything to fight the legislation that required blocking those frequencies? Did we propose counter legislation where cell phones could be made secure by use of a scrambling system?

What about consumer awareness? I distinctly recall reading that my cell phone was a transmitter and that its signals could be intercepted by a third party. IOW, don't talk credit card numbers on an unsecure line!

Where we failed was not just blabbing about the capabilities of scanners. Only US scanners have cell phones blocked. You can import a scanner from Canada and still listen to cell phones. Illegal, yes, but not hard to do. All the older scanners will still pick them up too. The problem with cell frequencies has not been solved. It is up to the telcos to provide secured phones. That means using protocols that are resistant to man in the middle attacks.

The issues are both political and technical. Congress looked at the options (I hope) and chose the wrong solution. Rather than thinking that they are malign, I think they were simply incompetent due to being ill-informed. Scanner makers should have testified before congress and stated flat out that the best solution to the problem would have been to implement scrambling in the cell phones.

Now that digital phones are out, the problem is being fixed. The 800Mhz bands used by conventional phones are certainly offer a wide enough spectrum for digital phones. We all know what digital transmissions sound like. Add a layer of encyrption technology, not DES, but one that is resistant to man in the midddle like SSL, and the problem is solved.

The hardware to decipher GSM phones should be too exensive to be within the reach of ordinary people for a few more years. I think at best, my laptop computer would take about 30 hours or so to crack an arbitrary DES key. I would have to be actively following someone with the real intent of eavesdropping to go to those lengths, not something a normal scanner would do.

I know scanning cell phones is illegal, but I am new to the hobby and am trying to learn all I can about scanning. I have been told by a few people, that even if your scanner is not "cell-enabled" you can still pick up cell phone transmissions, is this true? Something to do with being able to pick up an "image" of the cell frequency. What frequency range should I be scanning for cell phone transmissions? If I have offended anyone by this question, then I apologize. thanks,

Then you need to express yourself more clearly. What you said was
that a person defending themselves with a gun may be taken down at
gunpoint. And again: Defending against what?
> > >

> was made with the knowledge that police officers simply don't pull thier
> weapons on people who are doing nothing more than walking down the street.

And here we are at the beginning. Your statement simply isn't
true. They do pull their weapons without justification, and point
them at people who are not guilty of crime. Not all officers, to be
sure, but one is too many, and there are far more than one, as the
record and often the headlines will attest. And to make the claim
that police officers simply dont' pull their weapons on people who
are doing nothing more than waking down the street is a false
statement on it's face.

> At any rate, the original poster stated that the reason he thinks we live in
> a police state is because he was ordered to take down his website. So you
> see, he did do something. But he never did say that he was forced at
> gunpoint.

What did he do? Put up a website? That in itself is NOT criminal.
And to suggest that he did 'do something' because he was ordered to
pull down a website is conviction by accusation. What was the
content of the site? Who made the order, and on what ground? If you
can't answer these questions, then all you have is a question, and
no grounds for a conclusion.

Here's a clue...people are ordered to pull down legitimate
websites everyday. They too often comply rather than stand up for
themselves, but the mere fact that someone was ordered to pull down
a site, is meaningless, in terms of concluding anything about the
nature of the site, or the legitimacy of the order.

Which is, in fact, my original point: That just because someone is
directed by authority to comply, doesn't conclusively imply they've
done anything wrong, illegal or immoral.

And if you're not willing to recognize that, then you're part of
the problem, too.
>
> If your local law enforcement agency has one, I'd suggest looking into a

> Then you'd see first hand what kind of stuff they have to put up with on a
> daily basis.
>
> Nobody loves a cop until a criminal is at the door.

One of the things I did, when I was in Shreveport, is ride along
with an officer of the very police department that produced George
Dartois. I did it on and off for the 10 years I was there, I did it
in Texarkana, Decatur, St Louis, and a small town in IOWA where I
also worked. I'm not speaking as a fan in the stand. I've been on
the scene first hand in firefights, traffic stops, drug busts, home
invasions, assault, robbery, rape investigations and self defense
situations. I've seen officers, just for the levity of the moment,
stop and detain motorists for sport, bust heads, break up parties,
and accept 'gratuities' from an array of Street Hostesses and Social
Aiders. Not all of them. But enough to know that when a defense
attorney says, "do not take for granted that the policeman is on
your side," I believe him, based on my own experience, and what I've
witnessed over the last 25 years riding in squad cars, and visiting
police stations.

And especially in Chicago, where I've now lived and worked with
the local police for 15 years, the abuse of privilege, authority and
power is alarming. And the razor that separates those who never
experience such abuse first hand, and those who do not, cuts across
racial, ethnic and socio economic lines in the most striking and

disturbing ways.

1610. Re: Tell us where you've found the PRO-92A?

Newsgroup: rec.radio.scanner
Date: 2000-07-25 00:00:00 UTC
From: Kwon2m@worldnet.att.net
Message-ID: <397e2640.3242908@netnews.worldnet.att.net>
Source record: 84008

I bought a PRO-92A (cat no 20-522A on the back panel) in the RS store
at the Paramus Park Mall in NJ last night. I don't know if they had
any more. Their display unit was not the A model. Too soon to report
much about how it works. Seems quite good as a conventional rig so
far, but I don't think there was ever much complaint about that to
begin with. If you're scouring RS stores, look for the 05A00 date code
sticker on the back of the box and 20-522A on the FCC tag on the back
of the radio. It still only has PRO-92 on the front panel.

Fuck you, you shallow little bastard of a dwarfed dicked ballbag licking aboriginal clusterfucker.

Bill Cheek was a great man.

Funny... You bag on him, and I am from San Diego.. However, knowing most of the people in and around the San Diego area who where hobbiests and / or tinkerers, your name doesn't ring a fucking bell.

Seems to me you probably knew Bill by reputation, and not personally.

Fuck you for baggin on someone in their death.

TollHolio...

Is this the same Hank Bennett who wrote a shortwave column for
Popular Electronics in the mid-1960's? I think he may have been
associated with the old Newark News Radio Club too.

Those radio columns in Pop Electronics first got me interested
in shortwave radio. Our school library had copies of PE and I
would browse them during Study Hall.

When you walk up to a dead person at a funeral to show him respect in real life,
if you see someone you don't like, do you shout out loud "Fuck you, you shallow little bastard
of a dwarfed dicked ballbag licking aboriginal clusterfucker"?
This is where we are to pay respect for Bill Cheek, not a place where we take out all our hate towards
every moron who gimps by us in life.

A typical John Mackey (or John Mackey wannbe/suckup) posting! For the uninitiated, this is the kind of thing that makes the likes of Mackey and his slavish adherents like Glen Quarnstrom so detested by the overwhelming majority of scanning hobbyists. There is a special place in hell (somewhere close to where they keep child molesters) for the kind of people who enjoy taunting the relatives and friends of the recently deceased. Bill had is faults, but no one in extermis should endure the kind of spiteful vilification he and his family were subjected to be these creeps.

Thanks. Actually I had know Bill for years and was a beta tester for him when he first started his interface business. The guy was down right brilliant and could trace through that interface and a Pro-2xxx in his sleep, but many times over the phone chasing bugs or my poor wiring.

He was abrasive to say the least. He and I had our falling out because I suggested he had gone to far with a fool and was losing it. He didn't take kindly to my friendly observation. We did not part on very good terms. Later that year he told a fool and the scanner NGs he was gone. True to his word he was. Too bad all around for Bill and the NGs.

Remove Everyone's bullshit of the past and only count substance. Cheek was a major contributor to this NG and certainly to the hobby, especially those with Radio Shack scanners. Detractors can say all they want but show me who did and GAVE more. Not many is any.

I'm done with the BS on this group too. My posts from this point on will be on topic and germane to the hobby of scanning. The flamers, lamers and fools can contact me through mail if you need to comment, we can have at it there in private one on one.

Glenn

Mr. Cheek added so very much to the hobby of radio and scanning. He will be greatly missed by me and a lot of other people. I hope his work and knowledge will be remembered for many years to come. He added spark, entertainment and a fresh outlook to the hobby. His advise was taken by many individuals looking for guidance while his books helped many to expand their radios in ways they never knew could be done.
As I said.... he will be greatly missed.

I found 380.7, 10.85, and 0.45 MHz IFs in the Uniden SC-200 I tested for
for review in March 2000 Monitoring Times magazine.

No, my argument is that a police officer SHOULD only use his weapon when
justified. Unfortunatly this is not the case. However, these bad cops
should be weeded out.

> Now you want to limit it to on duty incidents? The cases in
> Chicago this year and last where motorists were pulled over and shot
> dead by officers. One because she was armed with a cell phone.

Off duty incidents should not be considered an officer using his weapon in
the line of duty.

> And your assertion, as with Mr Bryant's implication, that because
> a weapon was drawn by an officer, there must be guilt of a crime, is
> also nonsese.

I have never made this assertion. Mr. Bryant did. If you read my example,
any time an officer arrives at the scene of a disturbance and a firearm is
involved, their first priority is to secure the scene so nobody has a chance
to pull a weapon on somebody. Sometimes it's the person defending
themselves with a firearm that is taken down at gunpoint.

> The fact that the court systems exist at all, are clear evidence
> that an officer is not presumed to be in the right when a weapon is
> drawn, and the victim is presumed to be not guilty.

I agree with you here. Innocent until proven guilty. Far from a police
state, eh?

> > Just because this idiot was a police officer
> > doesn't mean that all police officers are out to shoot someone.
>
> That wasn't the argument.

But it was the argument you were trying to make, that innocent people are
killed by police officers.

> Nice try. Even OJ was charged within days of hte murder. 20 Years?
> That's laughable.

I don't know the particulars of this case, so I can't really comment. But as I said, if the department was covering up for him, they are just as guilty. Regardless, one incident of an off duty police officer murdering someone does not make America a "police state."

> While not being East Germany, or a Soviet Republic, there is more
> than a grain of truth in the creator's point: we are very, very far
> from the land of the Free and the Home of the Brave in the year
> 2000.

We do have too many laws which are stupid and shouldn't even be on the books. We are overtaxed. Government is too big. But I still don't have to show my "papers."

Because Uniden in their infinite wisdom, doesn't want you to know. Possibly to avoid problems with people 'accidently' resetting their scanners?

At any rate, the keystrokes to reset most Uniden scanners is to hold the 2, 9, and manual keys while turning on the scanner. Don't know if this will work with your 200, but it's worth a try. Be sure that this is what you really want to do though before you do it!

Once again, sorry for the earlier misinformation.

>

oh get real. Mackey is Mackey's worst enema-enemy. Bill never
considered him much. Us 3-percenters who knew Bill knew it was not true
that Mackey was anything to bill other than "word-fodder".

anyone who took insult as to what Bill had say to them, well, loose
screws upstairs is thee. if you did not understand bill, then you did not
know people.

that qualifies most of the posters here who now are taking "numb"shots
at Bill.

Bill was more than most of you can see. The 3 percenters got along
with Bill becuse we were the chosen ones. We had access before mouthing off
as to why he excluded others.

I think that is what irks these butt-futts about non-Bill. He just
refused to acknowlege their stipidity and their redundancy in this life. He
knew those who were the 3 percenters as those who shared similances.

People like Mackey just slid by Bill. he really never gave much thought
to it except that he was having fun with the dolt-boy. He set up the
dolt-boy more than the dolt-boy knew. That is the genius of Bill. He set
the dolt-boy up and the dolt-boy assumed it was presents from his idol.

But the 3 percenters, we knew. That is why most of you will not
understand this statement:
Mackey did not affect Bill. Bill affected Mackey. That is the truth.
Mackey is not part of Bill's equation. He and me and others just used
Mackey for our entertainment.

I still have those e-mails. They are funny. it
was bill to be funny while being truth ful. Most of you could not accept it
as truth. Bill was miles ahead of you. Some of us were with him in that
sight. The 3 percenters.

bill conduit
3 percenter.

1648. What's a good beginning scanner

Hi!
I'm hoping you can help me! My husband wants a radio (police)
scanner for his birthday. I've been trying to research them
online, and it looks like the Uniden Bearcat is the most popular.
My question is... which one should I get him? We live in Chicago
and he just wants to have one for fun. Nothing serious, just
kind of a hobby. I want to make sure I get one that's "powerful"
enough, but I don't need to much either. What would you suggest?

Also, I've seen a lot of on-line stores, that seem to sell them
pretty cheap. Should I trust them? Reading your ng, it seems
Radio Shack is an option, but I'd like to get the most for my
money. Has anyone bought from a reliable on-line store?

Thanks for any help you can give me!
Jodi

Go back and re read your premise..You SAID an officer only pulls
his weapon when justified. If you meant to say something else then
so be it. Yes, an officer SHOULD only pull his weapon when
justified, but that is too often not the case. And the morgues in
this country bear witness to that fact way too often.
>

The original assertion wasn't limited to on duty, only to an
officer's service weapon. Since an officer is technically never
really off duty, the distinction is actually irrelevant.
>

Defending against what? And since when is defense an actionable
crime? You need to be more clear, and you need to acknowledge that
the Police in this country are prone, if not encouraged, to the

preemptive use of deadly force, as your example above demonstrates.

Unarmed woman stopped for a traffic violation is shot dead by teh
side of the road, in her hand: a cell phone.

Two unarmed high school football players shot dead in a routine
traffic stop.

Go over the headlines. The pattern is clear, and guilt is not
necessary for a service weapon to be drawn.

> > > doesn't mean that all police officers are out to shoot someone.
> >
> > That wasn't the argument.
>
> But it was the argument you were trying to make, that innocent people are
> killed by police officers.

No, go back and re read...My point was that a person does NOT have
to be guilty of a crime to be on the wrong end of a service weapon,
and that to question someone who relates such a story with , 'what
had you done?' implies not only guilt, but the right of the police
officer to over react. Neither is true. But the prevailing wind of
late, is that accusation demonstrates guilt of SOMETHING, if not the
accusation itself. And despite the fact that in many cases there is
cause to suspect guilt of SOMETHING when a police accusation is
made, it is by far NOT conclusive, and innocent people are punished
for the mere fact that they were accused. As in the case of Mr
Bryant's comment, the fact that a service weapon was drawn implied
that the person was guilty of SOMETHING, and that was enough.

This is a mentality that is becoming common. It empowers police
abuse of their authority, and an over reliance on their service
weapons.

The department not only covering up, but intimidating witnesses.
A United States Senator was elected on his cracking of this case.

> Regardless, one incident of an off duty police officer murdering
> someone does not make America a "police state."

Far more than one instance. And the protection of the badge itself
makes an interesting statement.

As for "police state," that's a separate argument. My position
here was solely on the matter of implied guilt when an officer pulls
his weapon. The matter of the police state was in fact part of
another thread. But as long as it was dragged into the conversation
my response below, stands.

>
> > While not being East Germany, or a Soviet Republic, there is more

> show my "papers."

Really? Guess again. In Chicago, recently, a case came to trial
in which a young man was spotted by the Police, he was asked to
present himself and he ran. His history with police brutality, and
harassment was well established, and evidence provided demonstrated
that he was guilty of nothing in this case. Police attempted to stop
him for questioning, and wound up chasing him down and arresting
him, for resisting.

What came out in the trial was that when an Officer asks to speak
with you, probable cause is not necessary, and he can demand to see
ID. Refusal to comply may result in arrest and detention.

Similar cases have sufaced in most major cities.

So, yes, you DO have to show your "papers".

Pay attention. The Court recently had a very eye opening ruling on
Miranda.

You may wish to look into that.

It is interesting to note the number of organizations, some non-profit and others who just wanted a fast buck. RCMA was a club that happened to assign state-numbers, no longer in existence. Popular Electronics had its WPE letters, which later became WDX numbers. I think the program was run by Hank Bennette. There was a commercial entity in Long Island, that will remain nameless who has long made a quick buck at the expense of newly minted monitoring types, offering a certificate and a number for a fee. Pure profit motive. You could make yourself a certificate on a computer with the same "official" standing. No registration requirements for monitoring hobbyists in the US, although it helps to have an amateur license when mobiling is some states. Many foreign counties still license their radio listeners, BIG Brother is watching and listening. One of the first rules of controlling a country, take over communications because it isolates the people.

The old Popular Electronics invneted the scheme.
I think Tom Kkitel [of current PoP-Comm] signed them.
I guess I could did mine out and chek for sure.
As a joke, get a time machine and go back to 1958.
Otherwise try some of the SW clubs, theymight provide that service.
Another option is to get a ham license.
The resultant call letter set is yours, for ever.
And it is "official".
I mean, we could both set up opposing registrations and end up passing out the same "ID" to differnt poeple.
OR do a what a friend di bback in the 60. He use his intials, the FCC ham call area and HT for CB and SW for SWL
IE this is th 4 area, so ABC4SW or ABC4SWL.
Good Luck

Some Euro countries used to charge a yearly fee to own a radio
or TV set. I think it was more of a way to raise revenue and
pay for their state-owned radio than to control people. I seem
to remember Britain doing this but some of our British readers
would know more about it.

There were some countries with formerly totalitarian governments
that did make it illegal to listen to foreign shortwave radio
broadcasts. It may still be illegal in places like North Korea
or some of the African counties with dictatorships in force.

Think of the Icom IC-R10 as a scanner first and a shortwave receiver second. I've owned and used an R10 for about six months now, and most, if not all, of my shortwave receivers will easily outperform the R10 on SW and MW. SW and MW reception with the stock R10 antenna is dismal: you'll be lucky to receive WWV and shortwave powerhouses like the BBC. However, the telescoping whip antenna for handheld scanners which Radio Shack sells for $9.99 will improve the R10's SW and MW reception tremendously. I wouldn't recommend using an outdoor antenna with the R10, because the front end of the radio will be easily overloaded by strong MW and SW signals. SSB reception with the R10 is good but not great, although the Icom's ability to tune in precise 10 hz steps does help a bit. Reception of the VHF & UHF frequencies with the R10 is as good or better than any of my handheld scanners, including my Radio Shack PRO-26. FM broadcast and TV audio reception with the R10 is very good as well, although I'd say that the Sony SC-1 has a slight edge over the R10 in the WFM frequency ranges. Overall, the Icom IC-R10 is well worth the asking price, but don't expect miracles. There are very few wideband receivers that can "do it all", with the possible exceptions of the Icom IC-R8500, Yupi 9000, and the AOR AR-5000.

The Relm HS-200 has very good reception between 25-30 MHz if used with the
$9.99 Radio Shack telescoping whip antenna. The Relm will "hear" CB signals
that even my handheld CB with a loaded whip antenna won't receive.

I didn't say defending yourself is a crime. The simple matter is when police officers respond to a scene and see a man with a gun, they're going to secure the weapon first, then find out what is going on. Any officer who doesn't is a dead man (or woman).

> >
> > But it was the argument you were trying to make, that innocent people

> to be guilty of a crime to be on the wrong end of a service weapon,
> and that to question someone who relates such a story with , 'what
> had you done?' implies not only guilt, but the right of the police
> officer to over react.

I'm not implying that the police have a right to overreact, but my comment was made with the knowledge that police officers simply don't pull thier weapons on people who are doing nothing more than walking down the street. At any rate, the original poster stated that the reason he thinks we live in a police state is because he was ordered to take down his website. So you see, he did do something. But he never did say that he was forced at gunpoint.

If your local law enforcement agency has one, I'd suggest looking into a ride-along program where you can ride for a full shift with an officer. Then you'd see first hand what kind of stuff they have to put up with on a daily basis.

Nobody loves a cop until a criminal is at the door.

I lived in England 7 years ago and at that time TV licenses were still
required. The British government even had TV detector vans that would drive
around a nieghborhood and find the LO signals of TV sets. If your name
wasn't in the register of who had TV licenses, then you were fined.

In 1970, CRB's regular field monitoring
correspondents began using special ID's,
similar to callsigns, in communications
correspondence, signal reports, on QSL's
etc. Those ID's were assigned by CRB HQ's.
As they became known within professional
& hobby communications circles, we began receiving requests from many
persons involved with communications
who wanted one of these ID's assigned for their own monitoring stations.
We then established what evolved into our hobby-wide Monitor Station
Registry program -a program that has registered thousands of
HF/VHF/UHF in the US & Canada. In fact, it became the central registry
for all monitors, superceding all obsolescent & now inactive projects
attempted earlier by others, such as WPE, WDX, etc. CRB's
distinctive Registered Monitor ID's are held by many of the best
known communications hobbyists & are regularly seen in all leading
hobby publications & in much of the hobby's correspondence.

A registered ID (such as KTX5WN, KCA6BT etc.) in a letter or on a
card tells public safety officials, manufacturers, dealers, publications,
broadcasters & other monitors that the writer is a serious & active user
of professional monitoring equipment. It immediately identifies the
writer with the large & rapidly growing corps of responsible persons
participating in this vital important aspect of communications.

Now, CRB extends to you a personal invitation
to participate in this dynamic program!

When you register your monitoring station you receive:

An individually assigned distinctive official
personal monitoring ID

A handsome 81/2" x 11" parchment certificate
inscribed with your name & registry ID.
Perfect for display on your station wall, home or office.

This registration is permanent. This is not a club & there are no dues to
pay.
Just $10 USd

To become a Registered Monitor Station:

Complete the registration on our secure order form &
submit with the 1-time lifetime fee via our online order form
or

print out our order form & mail with registration fee to:
CRB, P.O. Box 56, Commack, NY US 11725

Monitor Station Registry certificates are mailed 1st class to US
& Canada addresses.

Countries outside the US & Canada send $10 international
money order in USd.

Certificates are mailed flat & are sent separate from regular orders.

Allow 4-6 weeks for US & Canada addresses
& 6-8 weeks outside of US & Canada.

Yes, and according to Stew MacKenzie (sp?) Hank Bennett still runs the
program. Maybe Stew would be so kind as to post Hank's address again.

It's still in effect, Tom. I've got a friend in London that I
correspond with and he recently mentioned that his TV license runs him
something like 150 UK pounds a year, which I guess translates into
around $240 in stateside terms.

1685. Motorola Trunking...

Newsgroup: rec.radio.scanner
Date: 2000-07-25 00:00:00 UTC
From: Tony Cellini <drksky@home.com>
Message-ID: <397CE731.13F1C239@home.com>
Source record: 84130

I have it on good authority (city cop) that my city not only uses an area-side EF Johnson system, but also a city specific Motorola system (dunno if type I or II) in the 900 MHz region. When I do a search on 890-960, I do get a bunch of hits, but they are what sound like digital signals, but they do display a MOT ID. Is it possible that it is a digital trunked system, or am I finding something completely different? Is he way off base on the frequency range and I should be looking where the LTR system is (but on different freqs)?

Unfortunately, I live in a somewhat small city that I have yet to find listed in any of the trunking guides. The county-wide LTR system is listed, but not the city.

So I guess the last question is, does anyone have any trunking information for the city of Bloomington, Illinois??

Hello,

I'm looking for a Handheld TrunkTracker to monitor a local Motorola 800
trunk system. I know the PRO-92 and the BC-245 will easily handle my needs,
but I'm sure a used PRO-90 or 91 or a BC-235 would do fine at half the cost.
(used of course)

Any recommendations on which way to go based on the following?

-I want to listen to a select few talkgroups on one or two Motorola 800
trunk system.

-I DO NOT need to listen to more than one system at a time.
-I DO NOT care about its conventional performance.
-I DO NOT need EDACS or LTR capabilities.

You folks seem to have owned 'em all, so I look to your advise.

Thanks,
Sean

http://www.n9jig.com/radio/trs/mclean.html has the freqs for the McLean
Co IL LTR system. AFAIK Bloomington does not have a seperate 900 MHz.
system of it's own. They might rent time and radios on a commercial
system on 900 MHz. but this is unlikely.

Also check the old 460 and 453 freqs for BPD.

Well kinda right....
1.9 ghz to 2.3 ghz. Depending on other 2ghz users. Usually about 2
watts on the uplinks. the cars use pankace antennas that are relayed
usuallt to an airplane orbiting overhead. A helo is expensive and only
used when and airplane CAN'T be used(thunder boats).
never seen a carcam on 10ghz in the U.S.A 13 gigs when 2 gnz is too
crowded...even 28ghz(rare).

so if you have one of those little Icom Tv radios...you might see the
downlinks to the microwave control trailer...but you will need to find
the audio subcarriers.

Yep, Bill did a lot for the radio hobby. He'll be missed.

Well, obviously you have a defective item, since there is "No 5 second
delay" problem. I'd send it in for repair as instructed to do by one
of their employees.

I just ordered a couple of the BP-1600 NiMH (Nickel Metal Hydride) battery packs from Lee's electronics. $24.95 each.. They will fit the 235 and the 245 and give much more battery life without the memory effect of nicads.. Check at: http://www.leeselect.com/ for them and other scanner related accessories, etc.

I have the right to choose to obey the law. And deal with the consequences of my actions through due process of the law.
It is no different than speeding in a car with a motor designed for a race track.
What or who is affected by a modified scanner? Scanners were around before cell phones and cordless phones. Most of those are digital now so the old scanners and the modifications are pretty useless for listening to those devices.

Many of the modifications that Bill Cheek publicized were prior to the law. Fortunately we still have freedom of the press and speech in this country so his books are still available.

I guess a person like you would burn your books and turn in your guns if someone passed a law.

Myself, I will continue to enjoy, support and fight for the freedoms afforded everyone in this country regardless of what unenforceable laws your elected government can dream up this decade.

Jeff, Comparing Bill Cheek to a drug dealer is simply ASSANINE!! as is the Cell laws..... If a person needs privacy DON'T use a cell phone..... There is a very large number of laws on the books through-out the US that if enforced would cause a CIVIL WAR! some of these laws ar ancient!! I'm not a Scanner Buff at all..... I could care less about modifying scanners..... I do however recognize Bill's name, Its unfortunate when Cancer or any other disease causes an un-timely death! Any ones death! Again I'm not a Bill Cheek fan, but even my casual glimpses of articles written by him, allow me to conclude the fellow made some valid contributions..... Other than BLOWING YOUR HORN, what contributions have you made??? I'm not refferring to a local level either! I don't recognize your name from any National publications..... No matter what subject a person chooses to write about critics will always be there! Pleasing everyone is highly unlikely! Why Rip on a guy after death? If you felt this negative about him, express this to a living person..... Not after he's dead and gone!

To Bill's family, hats off to the man!

Many, if not most of Bills mods had nothing to do with cell. Adding
channels, getting rid of keyboard beep, rf meters , receiving ssb on the
2006, speed up mods. . . Modified does not mean "opening the cell freqs".
Any way , most of the cell mods were legal when his books went to publish.
I'll miss Bill as well. We sent a few e-mails back and forth. He was a good
guy. He could be a jerk, I'll admit that (that's true of many of us). But
at least he posted a BUNCH of on topic , helpful info.
It seems to me that this is the perfect time NG bickering to end.

Good scanning !

The ASTRO system out of the box is not encrypted, but there is the
possibility that they have added an after market little black box.
Here in N.H. State Police went to ASTRO and life has not been the same.
It's hard to follow anything. We had an MVA on the highway tonight and all I
could hear was the units in my fire dept. (I was at work dispatching for the
local pd). We don't even have the damn radios (and probably won't, either).
I heard some traffic, but not much.
SP is going to be trunking the 10 or so freq.'s that they have assigned.
That throws a nice twist on the works if digital scanners end up not being
able to handle the trunking out of the gate.

ASTRO's can be analog or digital, trunking and conventional. They also can use several forms of encryption depending on programing and options. NH went Astro so they could experiment with digital Apco 25 VHF system while still having some channels analog.

I knew Bill since the early 70's. He had just got out of the Navy. We had FUN in the days of early CB. What a loss.

Memmorys will never be forgotten.

Take care Bill,

Owen KB5XE Tripple D -early days-Albuquerque, NM

the following items are for sale only SERIOUS REPLY'S
PLEASE

1- a motorola R-100 UHF 50 watt desk top repeater with duplexer and
dual tone panel
in very good working condition and computer programmable im
asking $800 plus the
cost of shipping

2- i have a brand new Zetron 38max tone panel in very good condition
comes with
operating manuals im asking $400 pulse the cost of shipping

3- i have a large RX/TX pass band reject Duplexer in very good
condition im asking
$300 plus the cost of shipping

4- i have a motorola 35 watt 2 channel VHF mobile in very good
condition
computer programmable im asking $200 plus shipping

5- i have a motorola 50 watt UHF Spectra Mobile Base with Full Front
Display and
Key Pad with DES in very good condition it dose not cover the HAM
bands im asking $800
and a DES key loader and cables im asking $400 plus the cost of
shipping

all of the above items are in very good working order and are
in good to fair
condition i will not be taking any personal checks only US Postal
Money Orders i have
sold many items in the past with no problems and please don't ask me
to drop the price
because im going as low as i can with out givingit away and if you
live in the new york city
area you may stop by to look at the items first hand and you could
save on the shipping cost

Sad news about the Cheek Man....he was 56.

In passing I propose that from this day on we honor Bill by not posting or respond to any postings by the Idiot of Mackeral.

There is no purpose for the Idiot to be on this site and I would think he will do the honorable thing: disappear.

I promise not to mention the IDIOT on this news group or alt. from this day forward.

Take the pledge silently and follow down. No need to encourage furtherances by the IDIOT.

Well, buddy, I did stuff in the service that is still classified today ! And I bet there are quite few others... Information only drops one notch in classification every 20 years.... Stuff that was "Top Secret" in `Nam is just now beginning to reach the point where it will finally be "confidential" in a few years.

That article is pretty stupid... It seems that the article leaves out one important aspect of tracking a cell phone caller... the 911 call.. if 911 centers had the capability to track a cell phone caller, they could better assist them, especially if the person has become unable to talk or is afraid to talk because of possible threat to their life. If this technology was in 911 centers, I am sure that the same laws would apply to tracking someone using this as would evesdropping laws. There may even be legislature out there already. I really doubt that the police or the government could just track someone without any sort of court order or warrant...

Does anyone know if any sort of tracking equipment for cell phones is out there or is this article just another paranoid fantasy?

I understand that the technology is there, but it is not being mandated for another few years. The cell companies must be looking at the bottom dollar because they have not done any thing yet to improve the safety of their customers.
They are able to tell which antenna that is being used for that call. I wonder if they will incorporate some method of triangulation...

Who gives a flying fuck????

Come on, people, GROW UP!

This is a newsgroup about scanners, not your petty squabbles about who lied to whom, how much worse their lie (which you have no way of proving is a lie in the first place) was than the other guy's, or anything else along those lines.

SCANNERS. Those funny little boxes with buttons on 'em that let you listen to the cops and other interesting stuff. Remember those? Or has memory of them been washed away in your idiotic little pissing contest?

What's the point? How many more years can we keep it going now that one of the principle characters involved is dead? Such a worthy achievment...

It already incorporates exactly that, although the capability wasn't explicitly designed to function as a tracking device. It's a "by-product" of the process of keeping track of whether a given cell-tower should keep trying to talk to a phone, or hand off to another tower.

Anytime a transmitter (cell phone, walkie-talkie, CB rig, or whatever) is in range of two receivers, they can, if they are directional enough and located far enough apart, pinpoint the location of the transmitter to within a few yards. More receivers in more locations = more accurate locating of transmitter. Doing this doesn't even need the sophisicated signal-strength measuring capabilities that are built into every cell-site. Just a pair of directional antennas. Throw in the signal-strength measurement that they have, and the task becomes even simpler. To the point of being something that "just happens", regardless of whether the location is actually wanted or not.

Turning that information into something that would allow Joe Beat Cop could use to pick you out of a crowd is another story. You'd need access to the raw data coming from at least 2 cell-sites (easy enough to get, at least in theory) and a way to turn it into an "OK, a little to the left, yeah, that's it, now 20 yards straight ahead, whoops, you overshot, turn around and go back" set of directions.

English spare parts huh...the English designed and built the most sophisticated parts and systems of this outstanding aircraft. England invented the jet engine...and Rolls Royce, an English company, designed and built the Concordes Olympus afterburning turbojets, the only ones of their kind in the world fitted to a passenger aircraft.

These Concorde airliners with their outstanding world class English design and manufacturing have flown safely for 30 years. The engine that caused the crash of the plane had a minor problem with its thrust reverser, something that would not cause the jet to be grounded, or cause this kind mal-function. But an incompetant repair of the thrust reverser that did damage to other more vital parts of the engine by a French mechanic 30 minutes before the aircraft crashed would...and looks like it did.

Icom's R2 covers Cb frequencies. As does Relm's MS 200 if you can find one.

Hi,

I've had a quick look for a FAQ, but can't find one so bear with me if this is FAQ! ;-)

I'm looking for a cheap scanner that will cover the 32MHz cordless phone band in the UK. Any help/pointers etc would be most welcome!

Regards,

Jon.

As far as I'm concerned, my copyright has not been violated by Mr.
Wirehead. Ergo, no laws were violated, except in your feeble mind.

Reposting without permission while still citing the author does not
violate any so called "net-ettiquite," except in your limited
demented mind.

The United States Government still has classifed information dating back to World War I, as reported on 60 Minutes a couple of years ago. It's not surprising that information only 25 to 35 years old is still classified.

Bill, I think someone said it before "Dying is not a laughing matter".

Anyone who tried to make a life helping and catering to the people that populate this hobby has to be commended.

From the little I know most everyone who has a modified scanner owes Bill Cheek a thank you, I haven't found anyone else who has contributed more to the hobby.

The "A" hole that started this thread has already received more attention than he deserves.
My suggestion is to show our respect kill this thread and not be lured into anymore regarding a persons death.

FOR SALE:

ICOM IC-R8500 Professional Wide-Band Communications Receiver

Frequency Coverage:
0.10000 - 823.99999 MHz
849.00001 - 868.99999 MHz
894.00001 - 1999.99999* MHz (*guaranteed: 0.1 - 1000 and 1240 - 1300 MHz)
Mode: SSB (USB,LSB); AM (Normal, Wide, Narrow); WFM; FM (Normal, Narrow); CW (Normal, Narrow*) (*optional filter required)
Number of memory channels: 1000 (plus 20 scan edges and 1 priority channel)
Antenna connector:
Below 30 MHz: SO-239 (50 ohms/Phono [RCA (500 ohms)])
Above 30 MHz: Type-N (50 ohms)
Usable Temperature Range: -10�C ~ +50�C; +14�F ~ +122�F
Frequency stability (in FM mode):
Below 30 MHz: ±100 Hz (optional ±20 Hz)
Above 30 MHz: ±3 ppm (optional ±0.6 ppm)
Tuning steps: 10, 50, 100 Hz; 1, 2.5, 5, 9, 10, 12.5, 20, 25, 100 kHz; 1 MHz or programmable (0.5 - 199.5 kHz/0.5 kHz steps)
Power Supply Requirement: 13.8 V DC ±15% (negative ground) or 117/220/240 VAC (with AD-55/A/V)
Current drain (at 13.8 V DC):
Standby: 1.8 A
Maximum audio output: 2.0 A
Dimensions: 287(W) x 112(H) x 309(D) mm; 11.3(W) x 4.4(H) x 12.2(D) in
Weight: 7.0 kg; 15.4 lb.
Receive system: Superheterodyne
Intermediate frequencies:
1st: 48.8 MHz (0.1-29.99999 MHz); 778.7 MHz (30.0-499.99999 MHz); 266.7 MHz (500.0-1024.99999 MHz)
2nd: 10.7 MHz (0.1-29.99999 MHz); 10.7 MHz (30.0-499.99999 MHz); 10.7 MHz (500.0-1024.99999 MHz)
3rd*: 455 kHz (0.1-29.99999 MHz); 455 kHz (30.0-499.99999 MHz); 455 kHz (500.0-1024.99999 MHz) (*except WFM)
Sensitivity (typical):
Frequency band (MHz) SSB/CW AM AM-N AM-W FM WFM
0.1-0.49999 1.0 µV 6.3 µV - - - -
0.5-1.79999 2.0 µV 13.0 µV - - - -
1.8-1.99999 0.25 µV 3.2 µV 2.5 µV - - -
2.0-27.99999 0.2 µV 2.5 µV 2.0 µV - - -
28.0-29.99999 0.2 µV 2.5 µV 2.0 µV - 0.5 µV -
30.0-999.99999 0.32 µV 2.5 µV 2.0 µV 3.2 µV 0.5 µV 1.4 µV
1240.0-1300.00000 0.32 µV 2.5 µV 2.0 µV 3.2 µV 0.5 µV 2.0 µV

Squelch sensitivity (threshold/tight):
1.8-29.99999 MHz:
SSB, CW, AM-N: 10 &#65533;V/320 mV
AM, AM-W: 0.5 &#65533;V/320 mV
28-29.99999 MHz:
FM: 0.5 &#65533;V/320 mV
30-1000, 1240-1300 MHz:
FM, AM, AM-W: 0.4 &#65533;V/320 mV
WFM, SSB, CW, AM-N: 4.5 &#65533;V/320 mV
Selectivity:
WFM: More than 150 kHz/-6 dB
FM, AM-W: More than 12 kHz/-6 dB
AM, FM-N: More than 5.5 kHz/-6 dB
AM-N, SSB, CW: More than 2.2 kHz/-6 dB
Spurious and image rejection ratio:
1.8-29.99999 MHz: More than 60 dB
30-1000/1240-1300 MHz: 50 dB (typical)
Audio Output Power (at 13.8 V DC): More than 2.0 W at 10% distortion with an
8 ohms load.
IF shift variable range: More than &#65533;1.2 kHz
External speaker connector: 2-conductor 3.5 mm (1/8 in)/4-8 ohms

Purchased brand new on May 31, 2000 (will supply original receipt showing I paid: $1458.00). Radio is "as new" condition! Complete with original carton, manual, power supply, AND factory warranty!

Asking price is: $1000.00 firm. If I do not sell it by Monday, July 31, I will be posting it on Ebay for auction with a $1000.00 reserve.

Price does not include shipping...buyer to pay actual shipping, plus insurance. I will double box, for maximum protection.

Payment terms via PayPal, or U.S. Postal Money Order, in advance.

Thank you,

Bill Crocker

1761. FS: OptoTrakker by Optoelectronics

Newsgroup: rec.radio.scanner
Date: 2000-07-26 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <6WKf5.52290$fR2.476882@news1.rdc1.mi.home.com>
Source record: 83994

FOR SALE:

OptoTrakker, by Optoelectronics

The Optotrakker is a communications decoder that when interfaced to a computer, will quickly and easily turn a number of receivers into a trunked radio tracking receiver. The Optotrakker can also interface to virtually any receiver for the decoding of CTCSS, DCS, LTR, Motorola Type I and II, and DTMF, in a non-PC application by displaying data on its two line LCD display.

The Optotrakker used with the supplied TrakkStar Windows software, is the first and only product that can scan multiple types of trunking systems on any frequency band at the same time. The Optotrakker allows you to now scan Motorola 400MHz, 500MHz, 800MHz systems, as well as the 900MHz systems, simultaneously with rapid speed and data capabilities. Using an exclusive pass through technology, interfacing with future receivers will be easy as the Optotrakker requires the use of only one com port. Supports ICOM R7000, R7100, R8500, R9000, R10, AOR AR8000, and AR5000.

Decodes CTCSS, DCS, LTR, DTMF and Motorola talk group ID's
Scan multiple trunked systems simultaneously
All trunked frequency bands supported, including 400MHz, 500MHz, 800MHz, and 900MHz
Interfaces to virtually any receiver when not under computer control
Supplied with TrakkStar Windows trunk decoding software
Built-in Data Slicer for decoding of FSK programs
Two Line LCD display
Interface cables supplied with OptoTrakker

Manufactures link:
http://optoelectronics.com/optotrakker.htm

Purchased brand new in June, 2000 (will supply original receipt showing I paid: $300.00). OptoTrakker is "as new" condition! Complete with original carton, manual, power supply, AND factory warranty!

Asking price is: $200.00 firm. If I do not sell it by Monday, July 31, I will be posting it on Ebay for auction with a $200.00 reserve.

Price does not include shipping...buyer to pay actual shipping, plus insurance. I will double box, for maximum protection.

Payment terms via PayPal, or U.S. Postal Money Order, in advance.

Thank you,

Bill Crocker

I never heard of the fellow, but seeing he's gone that's a tragedy all by itself. That he was important to so many people makes it doubly so. And only 50. I am muchly sorrowed.

The same in the Netherlands. It was a pure tax system, to finance public
broadcasting. It had nothing to do with controlling who listened.
The system of charging a fee per TV/radio has stopped last year.

I live in Genesee County Michigan and there are 2 cities that are half in my county and half in the neighboring county (Lennon's other half is in Shiawasse County and Otter Lake's other half is in Lapeer County. I was wondering if there Police Departments and Fire Departments (or the police and fire departments that serve them) are dispatched by my county or the other county or both, or independently. I cant seem to find any freqs for either.

Also info on which local government departments serve them (road commision, parks and recreation, animal control, etc.) serve them. Any info would be appreciated. Email response is preferred.

I don't know whether it is or not. I do have all of the talkgroups and the frequencies but as to encryption I don't know. The local new groups must be able to monitor them somehow !! It is used for all fire, police and public service stuff such as public works.

Speaking of bein gin poor taste...

I was bowled over by this this afternoon as I strolled by the TV at work watching the Fox News crew try and get every angle they could of the smoking wreckage. Then Dateline ran a special tonight plastering the images all over prime time.

Instead of shooting all lawyers, we should shoot all the telejournalists.

Well said Dave, I am truly amazed by the intelligence that can rise out of this NG. It doesn't happen often but from time to time it does occur.

Yes, his early books, (pre-ban), gave details on cellular mods. Given that some scanner marketers blocked cellular coverage before it was made illegal by Congress, there was certainly nothing wrong with him publishing these mods.

As for why I posted it to the SAME newsgroups you posted to, I used the reply group button. You posted your inflammatory statements to all those newsgroups, I answered them so the same people could see the truth.

There are over 100 freqs in active use at Oshkosh. Much of the action
you'd want to hear is on the two tower freqs (118.5, used year 'round,
and 126.6, used only for the convention). Show control can be on any
freq. Today it was 133.85, but I've heard it on at least 15 other
rfreqs during my 16 years at EAA. The same is true for aerobatic
teams--there are a number of freqs they can use. At Oshkosh they
often use show control's freq.

I have been a scanner user for years and one of the best things to listen to is the police. The Vancouver City Police have now gone to digital trunk and cyphered radios. I was wondering if anyone was making a digital trunk receiver that can also work with a computer to brake the Motorola crypt and cypher system. All of the scanners I have looked at are completely useless for this system as that it is the most advanced system on the market today. Even the news media can't find anything that will work. I can be reached at camman@telus.net

Does anyone out there have the mods for out of band TX on the Alinco
DJ-G5T 144/440 MHz handheld. I am aware of cutting the blue wire
inside, but was told that will not work on this model, it would just
cause "lock up.
Can some one please advise, you can e-mail direct or post to this site.
Thanks in Advance

Aircraft ATC frequencies are standard world over. Regular ATC uses AM mode in VHF 108-134 mHz. Transoceanic and remote areas use SSB in a number of HF bands when flights are out of range of VHF. Aircraft are not trunked.

You're only 17 and probably haven't met many "city-folk." I'll bet
there are more guns of all descriptions within a mile of my apartment
in New York City than in the entire state in which you live. We know
about guns.

I'll bet, during rush hour, there are more guns on a single subway car
(not even the whole train) than there are in your neighborhood.

What we "city-folk" wonder is why you need an Uzi for deer hunting? I
thought it was a sport where the animal at least had a fighting
chance. Where's the challenge when you don't have to do any actual
hunting and try an outwit your prey? Shooting fish in a barrel isn't
as exciting as going fishing.

> Does the Icom R2 ASCII interface software work for the Icom IC-R10

No, it only supports the R2, since that's the only radio I have, and
I'm doing this for free on zero budget.

Now, if a few folks want to get together and donate an R10 to the
effort, I could probably support it...

That is where your wrong. I choose every day what I want to do. I live by a sense of morals and the 10 commandments not by a beuracrats idea of what is right or wrong. You know what I seem to do just fine.
>
> >What or who is affected by a modified scanner?

>Rich (former "country-folk")
Sticking my foot in where I shouldn't:
There are at least two types of hunters and hunting.
The first is what people do for survival. There is no pretense at fairness.
After all we do not give animals in a stockyard a fighting chance.
The second is "sport". The skill to track an animal down, to "out think" it
and nail it. This hunter makes a big deal of how fair we must be, frowns on
using baited fields, night goggles, shooting from a car, et al.
OF course if they really wanted to give the animal a sporting chance they
might want to consier a flint bladed knif. Or at most a spear. I lost a great,
great grandfather to a irrate male deer. It snuck up behind him in the family
cornfield and stomped him to death. His daughter commented that she did not
know deer could kill. In my mind it is not sporting until the animal stands
a fair chance of hunting back.
Now as to the utility of a Uzi for hunting, I guess it depends on what type
vermin/prey you are after.
These catagories apply to fisher-people [we must be PC!] also.
Fishertypes who depend on fish for a living are remarkably un romantic about
their job. People like my father, who spend way too many hours in a boat on
the lake treat it like the HOLLY EVENT, compared to the rapture found by
many on the GOLF COURSE.
YMWV
Please note:
Nothing in this was meant the downgrade any hunitng or fishing activity.
Just some [slanted] observations.
Now as for slighting golf, if the Scottish Lords had practiced the arts of
war/battle instead of whacking that little ball around, Scotland would have
remained an independent country.[VBEG--Very BIG EVIL Grin] I am decended from
the Campbells [amoung others] and my wife says the blood flows true in me, I
am the tightest person she know when it comes to spending money!!!]

These are the frequencies for UHF television.
But one never knows -- Since these frequencies are on so few scanners and
are so rarely listened to -- and in every community, only a few of them are
used for TV. This band seems like a perfect hangout for pirates,
clandestines, etc. I always wonder what (if anything) is there that is
not legal or official.

this was a radio repeater with autopatch or phone patch capabilities......

I've been near shopping malls and heard the mall security on their radios
with phone patch too.
some repeater services do offer phone patch capability.. hence that's why
they got the telco operator instead of the cellular operator

Abman wrote:

I have frequencies for many US airports.. also ahve an "aeronautical frequency directory" book where I can look up frequencies I don't know but want of need.

The airport LAX (in El Segundo) but called Los Angeles International Airport has a nice hill to the south that's good for plane spotting. the beach to the west if good too.

Burbank has a few good places.... I remember from Universal Studios being able to see the aircraft as they climb and turn or line up and descend.

At Phoenix.. try the roof of terminal 3 or 4, the parking garage is a great place..... roof of t-3 gives you a closeup view of the tower too

1839. Constitution Fourth Amendment and Carnivore Internet Monitoring

Newsgroup: rec.radio.scanner
Date: 2000-07-27 00:00:00 UTC
From: NSA <nsa@usa.gvo>
Message-ID: <3980B64B.8C36D61C@usa.gvo>
Source record: 83892
Cross-posted to: talk.politics,alt.privacy,alt.government.abuse,alt.politics.usa.congress,rec.radio.scanner

The Internet and your lack of Privacy!
Around 1997, our Government began using their own devices to monitor Internet users. It is nicknamed 'Carnivore', an advanced packet sniffer specially designed by Government contractors for Government to capture digital information sent and received by users on the newer high-speed Internet networks. It took three years, Year 2000, until Congress accidentally found out about Carnivore and started hearings on this matter.

Keep in mind that Congress will be unable to do much on this issue because time is running out in the 106th Congress. Keep in mind the NSA is higher level in hierarchy and Congress can not touch them. The NSA will continue to use passive undetectable methods to monitor society and they will continue to give any information to organizations lower in the hierarchy, such as the FBI and Secret Service. Keep in mind the FBI can monitor the Internet using other methods besides Carnivore, such as allowing the ISP to sniff their own network.

http://www.fednet.net/live.htm Scroll down to Monday, July 24, 2000 - House Judiciary Committee Subcommittee on the Constitution. You must see this Real Video about Carnivore and catch every word.
http://www.fednet.net/archive.htm They will move it to this link if you do not find at 'live.htm'.

http://www.house.gov/judiciary/con07241.htm Part of the documented comments of the above. Oversight Hearing on "Fourth Amendment Issues Raised by the FBIï¿½s ï¿½Carnivoreï¿½ Program".
http://www.house.gov/judiciary/corn0406.htm

http://www.aclu.org/issues/privacy/hmprivacy.html

http://flashcommerce.com/articles/00/07/13/174258030.htm

The Deception of Cellular Privacy Laws!
At the web page listed below, you will find comments about privacy laws attacking radio scanners. Laws that use the wrong approach to cellular privacy by enacting something never done in America before, that is the dangerous method of taking your rights of owning radios with unblocked radio-bands. Yes I am all for cell phone privacy, but it could have been done without radio-band blocking of scanners because the cellular companies could have simply secured their cellular systems. However, their significant growth and profiting from selling you their airwaves gave them superior lobbying powers in Congress. Well the cellular companies are finally securing their cellular systems making radio-band blocking of scanners unnecessary. Now look at what the Congress (House

and Senate) Committees on Commerce and the CTIA are doing. Something you should fear and not allow. They are proposing new laws that require more radio-band blocking of radios although there are the currently unnecessary laws doing this. In reality, radio-band blocking of radios does not improve your cell phone privacy. Today's new secure cellular systems do protect your cell phone privacy. Therefore, I am sending you this warning with good knowledge of telecommunications so you will take notice and do something to help stop and remove laws that restrict your right to own radios unrestricted from Government enforced radio-band blocking.

Computers are notorious for RFI (Radio Frequency Interferance) emissions....
why do you htink airlines now discourage use of electronics at certain
altitudes........they ar afraid that the RFI emissions will interfere with
aircraft navigation and aircraft onboard systems....

IN most cases this is not a problem... but if you load a place with 150 people
and give each a laptop and have each on doing calculations.. then it could be a
problem...

That's like thanking a drug dealer for providing you with drugs. (Of course, the two are not in the same catagory -- illegally modifying a scanner is a federal crime.)

Until a law is changed, you have the obligation to obey it, even if you disagree with it.

Hello there,

I am seeking a 16 channel UHF Icom mobile, I believe the unit is a U-16, it is about 10-12 years old. I want to put this in my car and be abele to program it off my Icom portable. I would like to mount the body in the trunk wih the head mounted under the dash. Any ideas how I can get one? Please drop me a note at the email address above.

Thank you,

1849. Bill Cheek Well Be Missed

>I have the right to choose to obey the law.

There is no "choice" involved.

>What or who is affected by a modified scanner?

You should pose that question to the Congress which enacted the law.

>Many of the modifications that Bill Cheek publicized were prior to the law.

Regardless of when a modification is made, it's the *listening* which violates the law. My Uniden 800XLT came from the factory with no unblocked frequency bands; the placard which came with the unit specifies what bands one should avoid. (To this day, I still haven't listened to other people's phone conversations.)

>Myself, I will continue to enjoy, support and fight for the freedoms

This receiver covers most frequencies between 25-1300.00mhz. Besides the cellular block, there looks like a gap in between 550-759.000mhz. Who uses those frequencies?
I'm going to be purchasing a new handheld, and I've narrowed it down to the BC3000XLT or the AOR8200 mark II B. Obviously there is quite a price difference. What can you listen to with the AOR that you can't with the Uniden??

Thanks,
Mike

The most common frequencies for Target are:

151.6250 PL Tone 179.9
151.9550 PL Tone 179.9

The most common frequencies for Walmart are:

154.5700 No PL Tone
154.6000 No PL Tone

Sears really doesn't have a common frequency. When I lived back
on the east coast in the Washington DC area they operated on the
following frequencies:

151.8350
151.8650
151.8950

In the San Francisco Bay Area I've found Sears on the following:

461.1875 PL 151.4
466.1125 DPL 071

1862. Announcing Icom R2 ASCII interface software

Newsgroup: rec.radio.scanner
Date: 2000-07-27 00:00:00 UTC
From: Richard Cochran <rcochran@netcom1.netcom.com>
Message-ID: <8loie5lfu1@slb6.atl.mindspring.net>
Source record: 83927

A couple of months ago, I bought an Icom R2 scanner, and I've been delighted with this little beauty.

However, I found the available computer interface software to be a bit lacking in flexibility and ease of use. It was fine for saving and restoring the radio's configurations, but doing much manipulation, as in moving frequencies from one bank to another, or combining a set of frequencies from one configuration with a set from another, was painful.

Rather than write software to do all possible editing I might want to do, I took a simpler approach. I wrote software which dumps the radio's frequencies into a plain ASCII text file, so that I can use a text editor, spreadsheet, or other program to cut and paste, sort, and otherwise manipulate things in any way I see fit. This approach allows other people to use my software to manipulate their own configurations in ways I never thought of.

Folks from the Icom R2 mailing list on egroups.com have been testing the software for several weeks, and have helped me iron out a few problems.

The software is free. A link to the download location is posted at:

http://www.geocities.com/eurobago/radiosoft.html

Enjoy,

--Rich

Jeff,
Many (90% or more) of the mods that Bill Cheek developed have nothing to do with listening to cell phones. Improved squelch, computer control of scanners, expanded memory channels, add-on signal strength meters, baseband audio taps for recording signals, just to name a few. And modifying a scanner isn't a crime, listening to phone conversations is. It's what you DO with the radio that can get you in trouble. BTW, id you think drug dealing isn't a federal crime, you've apparently never heard of the D.E.A.

I myself use one of Bill's mods, a discriminator output tap, to monitor and decode EMWIN (Emergency Managers Weather Information Net), which is distributed by the Nat. Weather Service and rebroadcast by our local amateur radio club. Ironically, it was this mod, a "data-slicer", that got Bill arrested last year. The info is freely available on a N.W.S. site. Go Figure!

Hi Mark,

There's no standard allocation for airline ramp frequencies in the
800 and 900 Mhz range. BTW, you should also search in the 461 thru
470 Mhz range when your at the airport. For example, the following
ramp frequencies are used by various airlines in the Bay Area:

San Jose International SJC

463.7125 DPL 132 Southwest Airlines
464.4875 PL 77.0 San Jose Jet Center
464.9125 PL 156.7 American Airlines
469.5000 PL 127.3 Northwest Airlines

San Francisco International SFO

461.1375 PL 203.5 United Airlines
461.2875 PL 203.5 United Airlines
461.8875 PL 123.0 United Airlines
464.3250 PL 203.5 United Airlines
464.8125 PL 203.5 United Airlines
464.9750 PL 203.5 United Airlines

Oakland International OAK

463.5625 DPL 074 Southwest Airlines
464.3625 DPL 074 Southwest Airlines
464.6375 DPL 074 Southwest Airlines

So you believe it's okay to break laws you don't like. Are you able to limit the number of laws you violate? From what I've read, it's doubtful; many criminals reach the point where determining right from wrong in any area of their life becomes an impossible task, holding in contempt any societal boundary which interferes with what they desire.

Good luck with your recovery, T.L.Bryant!

The helos are mostly being used as camera platforms and can also feed
video. I have worked directly with the racecam teams at Laguna Seca and
Sears point. We put cameras and transmitters on cars and superbikes.
(smallest package available)
airplanes were by far the choice. Fuel and race duration makes helos the
2nd choice for relaying the signals. Choppers can do the job...but you
might be suprised as to the restrictions on helos in the area of Laguna
Seca...It lies in the flight path of Monterey airport and the residents
of the central coast just love the all day noise of helos around the
mulitzillion dollar homes.

>I'm not a Scanner Buff at all..... I could care less about
>modifying scanners.....

I'm a scanner buff... but I don't see the attraction in
listening to cellular phones. BORING! Who wants to listen to
some guy call his wife and let her know what time he'll be home
for dinner? Besides, most people are moving to digital PCS.

Now cordless phone conversations, those can be interesting
(disclaimer - I am not saying I listen to them!). People do not
realize that cordless phones are RADIO TRANSMITTERS that can be
picked up within a several block radius with a good outdoor
antenna, sometimes even from a greater distance. It's amazing
what kind of information people give out over cordless phones.

I use a cordless phone myself, but if I'm going to give out
credit card data or something I ALWAYS unplug it and use a
regular corded phone. It's unbelievable the number of people
out there still using 25-channel 49 MHz unscrambled cordless
phones, and even more amazing people don't realize these can be
heard from quite a distance on a scanner. It would be nice if
someone educated the public about this, because an unscrupulous
person could commit all sorts of crimes using the information
heard over cordless phones (second disclaimer - I do not listen
to cordless phone conversations, never have, and never plan to).

Don't waste your time trying to
speak any reason to this fool
Glen Quarnstrom Lenny. He's been
knocking around this newsgroup and
others for years and is
a commensurate asshole.

Glen seems to get his rocks off
by spreading his bile and
then sitting back and watching as folks get
mad at him. The guys a total whack-job.
He's probably in need of psychological help.

He's the type of person if he don't get no attention
his anger starts welling up inside and you read about
folks like him later going into a post office
or shopping mall somewhere with a semiautomatic.

This is the ICOM U400. Mobile radio with the same microprocessor and same features as the U16 portable.

You can clone the mobile off the portable as you mentioned. You also could leave the external programming console permanently connected and punch in frequencies and tones as you were driving down the road. I forget the part number of the programmer, but it basically was the U16 keypad, no readout, a bit larger than a credit card and about 3/8" thick. Had six inches of ribbon cable which plugged into the back of the control head. Many people cut a small slot in the top of the control head to clear the ribbon cable. You attached the programmer to your car dash or whatever with a homemade bracket or Velcro.

The remote cable was CK12 I believe. Could be wrong. If you buy one, make sure you get the extra mounting brackets that came with it as it is a pain in the butt to mount the separate control head without the bracket. Speaker could plug into either the radio or back of the control head.

U400 is/was a decent radio, nice and rugged and relatively trouble free. They are still popular and bring a good price. Many parts are no longer available however, so be sure anything you buy is working and with a guarantee. There are a number of bad ones floating around looking for someone to buy them who doesn't know what questions to ask.

We occasionally have some for sale on our used equipment page which will be updated very soon. Go there and sign up for the automatic email reminder when the page changes.

We still service the U400 and similar ICOM commercial radios even though we need to look ourselves in the mirror with a clean conscious so we no longer sell them new.

Check out the photos on my web page. Its a tough question because many of the old crystal scanners are kind of junk now because they can't keep up with today's trunk-trackers. But for collectors value, some of the early Bearcat, Sonar, and Tennelc scanners are very sought after. I read from some guy that the first real scanner ever made was the GE Mobile-1 (see my photo gallery under Misc.). I've got one but the value is really determined on what people are willing to pay for it. One of the most expensive "scanners" was the Icom R9000 with the CRT display (between $5000 & $6000). They are also very hard to find. As far as the oddest, I'd say the scanner built into a pair of binoculars that is currently being sold (JCPenney?).

Scanners are a bit like computer equipment. If it can't keep up with what you want to do now, there isn't much value in it. How much are people paying for Atari's and Sinclair computers? The BC780XLT due to be released late this year will be the most sought after scanner.

Well with the 235 and 245 you normally charge the battery pack in the scanner. It uses a trickle charge and you can use either nicads or nimh. It just takes roughly twice as long to charge a higher capacity nimh pack as it does to charge a lower capacity nicad pack. Note that I refer to 'battery pack', which in the case of the 235 and 245 is a set of 4 AA cells with solder tabs soldered together in series in a sort of rhomboidal (diamond shaped) cross section. They have two conductors that end in a little plug (similar to cordless phones) that plugs into the scanner. The same battery packs can be used with the RadioShack Pro90 by the way, since the Pro90 is just a repackaged Uniden 235...

No and NO. It will be a real long time before anyone can dream up a digital decoding scanner. This is why so many of the public safety systems are now in the transition to the digital systems. It leaves the system immune to being able to be monitored. Great for the cops. Not so great to all that liked to listen to them.

Government has been using encrypted transmissions for awhile and some cities have went to digital as well. As far as I know the media is not entitled to a receiver. That not to say one couldn't be obtained. If one can be built it can be copied.

If a public safety agency in the U.S. cares about being somewhat open
and honest with the citizens, it allows the purchase of digital radios
with dispatch talk groups to the media.
One agency in california actually makes money off the deal by charging
$29.00 a month per radio to just listen to 13 digital talkgroups.

$3000.00(USD) can put you in a digital astro xts-3000.
Nice radio.

The poster described an 800 mhz SMR phone patch system to a tee.
It's not an image of a cellphone.
It is part of a private two way system that has a landline connect.
On my old system you keyed the mic and got a dial tone...you punched the
phone number in the mic and it would connect thru one repeater only.
you could talk about 3 minutes and then the system told you it was time
to hang up.
